Table 660. **Government Consumption Expenditures and Gross Investment by Level of Government and Type: 2000 to 2008**

[In billions of dollars (1,721.6 represents \$1,721,600,000,000). Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software). Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures. For explanation of national income and chained dollars, see text, Section 13]

¹ Includes other races not shown separately. ² Data reflect implementation of Census 2000-based population controls and a 28,000 household sample expansion to 78,000 households. ³ Beginning with the 2003 Current Population Survey (CPS), the questionnaire allowed respondents to choose more than one race. For 2002 and later, data represent persons who selected this race group only and exclude persons reporting more than one race. The CPS in prior years allowed respondents to report only one race group. See also comments on race in the text for Section 1. ⁴ Data represent White alone, which refers to people who reported White and did not report any other race category. ⁵ Data represent Black alone, which refers to people who reported Black and did not report any other race category. ⁶ Data represent Asian alone, which refers to people who reported Asian and did not report any other race category. ⁷ People of Hispanic origin may be any race.

¹ Includes other races not shown separately. ² Data reflect implementation of Census 2000-based population controls and a 28,000 household sample expansion to 78,000 households. ³ Beginning with the 2003 Current Population Survey (CPS), the questionnaire allowed respondents to choose more than one race. For 2002 and later, data represent persons who selected this race group only and excludes persons reporting more than one race. The CPS in prior years allowed respondents to report only one race group. See also comments on race in the text for Section 1. ⁴ Data represent White alone, which refers to people who reported White and did not report any other race category. ⁵ Data represent Black alone, which refers to people who reported Black and did not report any other race category. ⁶ Data represent Asian alone, which refers to people who reported Asian and did not report any other race category. ⁷ People of Hispanic origin may be any race.

NA Not available. ¹ Implementation of Census 2000-based population controls and sample expanded by 28,000 households. ² Beginning with the 2003 Current Population Survey (CPS), the questionnaire allowed respondents to choose more than one race. For 2002 and later, data represent persons who selected this race group only and excludes persons reporting more than one race. The CPS in prior years allowed respondents to report only one race group. See also comments on race in the text for Section 1. ³ Includes other races not shown separately. ⁴ Beginning with 2002, data represent White alone, which refers to people who reported White and did not report any other race category. ⁵ Beginning with 2002, data represent Black alone, which refers to people who reported Black and did not report any other race category. ⁶ Beginning with 2002, data represent Asian alone, which refers to people who reported Asian and did not report any other race category. ⁷ People of Hispanic origin may be any race.

¹ See headnote, Table 693. ² Data shown for census designated place (CDP). ³ Represents the portion of a consolidated city that is not within one or more separately incorporated places.

Source: U.S. Census Bureau. 2007 American Community Survey, series ACS-01; B19013, B19113, B19301, B17001, and B17010 (published 30 September 2008); using American FactFinder; <<http://factfinder.census.gov/>>.

Table 693. **Individuals and Families Below Poverty Level—Number and Rate by State: 2000 and 2007**

[In thousands (33,311 represents 33,311,000), except as indicated. Represents number and percent below poverty in the past 12 months. Prior to 2006, the American Community Survey universe was limited to the household population and excluded the population living in institutions, college dormitories, and other group quarters. Poverty status was determined for all people except institutionalized people, people in military group quarters, people in college dormitories, and unrelated individuals under 15 years old. These groups were excluded from the numerator and denominator when calculating poverty rates. Based on a sample and subject to sampling variability; see Appendix III]

NA Not available. ¹ Includes other races not shown separately. ² Beginning 2002, data represent White alone, which refers to people who reported White and did not report any other race category. ³ Beginning 2002, data represent Black alone, which refers to people who reported Black and did not report any other race category. ⁴ Beginning 2002, data represent Asian alone, which refers to people who reported Asian and did not report any other race category. ⁵ People of Hispanic origin may be any race. ⁶ Implementation of a new March CPS processing system. ⁷ Implementation of 1990 census population controls. ⁸ The March 1994 income supplement was revised to allow for the coding of different income amounts on selected questionnaire items. Limits either increased or decreased in the following categories: earnings increased to \$999,999; social security increased to \$49,999; supplemental security income and public assistance increased to \$24,999; veterans benefits increased to \$99,999; child support and alimony decreased to \$49,999. ⁹ Implementation of Census-2000-based population controls. ¹⁰ Implementation of sample expansion by 28,000 households. ¹¹ Beginning with the 2003 Current Population Survey (CPS), the questionnaire allowed respondents to choose more than one race. For 2002 and later, data represent persons who selected this race group only and exclude persons reporting more than one race. The CPS in prior years allowed respondents to report only one race group. See also comments on race in the text for Section 1, Population. ¹² Data have been revised to reflect a correction to the weights in the 2005 ASEC.

NA Not available. ¹ Includes other races not shown separately. ² Beginning 2002, data represent White alone, which refers to people who reported White and did not report any other race category. ³ Beginning 2002, data represent Black alone, which refers to people who reported Black and did not report any other race category. ⁴ Beginning 2002, data represent Asian alone, which refers to people who reported Asian and did not report any other race category. ⁵ People of Hispanic origin may be any race. ⁶ Implementation of 1990 census population controls. ⁷ The March 1994 income supplement was revised to allow for the coding of different income amounts on selected questionnaire items. Limits either increased or decreased in the following categories: earnings increased to \$999,999; social security increased to \$49,999; supplemental security income and public assistance increased to \$24,999; veterans' benefits increased to \$99,999; child support and alimony decreased to \$49,999. ⁸ Implementation of Census 2000-based population controls. ⁹ Implementation of sample expansion to 28,000 households. ¹⁰ Beginning with the 2003 Current Population Survey (CPS), the questionnaire allowed respondents to choose more than one race. For 2002 and later, data represent persons who selected this race group only and excludes persons reporting more than one race. The CPS in prior years allowed respondents to report only one race group. See also comments on race in the text for Section 1. ¹¹ Data have been revised to reflect a correction to the weights in the 2005 Annual Social and Economic Supplement (ASEC).

Prices

This section presents indexes of producer and consumer prices, actual prices for selected commodities, and energy prices. The primary sources of these data are monthly publications of the U.S. Department of Labor, Bureau of Labor Statistics (BLS), which include *Monthly Labor Review*, *Consumer Price Index, Detailed Report*, *Producer Price Indexes*, and *U.S. Import and Export Price Indexes*. The U.S. Department of Commerce, Bureau of Economic Analysis is the source for gross domestic product measures. Cost of living data for many urban and metropolitan areas are provided by The Council for Community and Economic Research, a private organization in Arlington, VA. Table 713 on housing price indexes appears in this edition from the Office of Federal Housing Enterprise Oversight, *Housing Price Index*. Other commodity, housing, and energy prices may be found in the Energy and Utilities, Natural Resources, and Construction and Housing sections.

Consumer price indexes (CPI)—The CPI is a measure of the average change in prices over time in a “market basket” of goods and services purchased either by urban wage earners and clerical workers or by all urban consumers. In 1919, BLS began to publish complete indexes at semiannual intervals, using a weighting structure based on data collected in the expenditure survey of wage-earner and clerical-worker families in 1917–19 (BLS Bulletin 357, 1924). The first major revision of the CPI occurred in 1940, with subsequent revisions in 1953, 1964, 1978, 1987, and 1998.

Beginning with the release of data for January 1988 in February 1988, most consumer price indexes shifted to a new reference base year. All indexes previously expressed on a base of 1967 = 100, or any other base through December 1981, have been rebased to 1982–84 = 100. The expenditure weights are based upon data tabulated from the Consumer Expenditure Surveys.

BLS publishes CPIs for two population groups: (1) a CPI for all urban consumers (CPI-U), which covers approximately 80 percent of the total population; and (2) a CPI for urban wage earners and clerical workers (CPI-W), which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers; the self-employed; short-term workers; the unemployed; and retirees and others not in the labor force.

The current CPI is based on prices of food, clothing, shelter, fuels, transportation fares, charges for doctors' and dentists' services, drugs, etc. purchased for day-to-day living. Prices are collected in 87 areas across the country from over 50,000 housing units and 23,000 establishments. Area selection was based on the 1990 census. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 87 locations. Prices of most other commodities and services are collected monthly in the three largest geographic areas and every other month in other areas.

In calculating the index, each item is assigned a weight to account for its relative importance in consumers' budgets. Price changes for the various items in each location are then averaged. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for regions, area size-classes, cross-classifications of regions and size-classes, and for 26 local areas, usually consisting of the Metropolitan Statistical Area (MSA); see Appendix II. Area definitions are those established by the Office of Management and Budget in 1983. Definitions do not include revisions made since 1992. Area indexes do not measure differences in the level of prices among cities; they only measure the average

change in prices for each area since the base period. For further detail regarding the CPI, see the BLS *Handbook of Methods*, Bulletin 2490 (June 2008), Chapter 17; the *Consumer Price Index*, and the CPI home page: <<http://www.bls.gov/cpi/>>. In January 1983, the method of measuring homeownership costs in the CPI-U was changed to a rental equivalence approach. This treatment calculates homeowner costs of shelter based on the implicit rent owners would pay to rent the homes they own. The rental equivalence approach was introduced into the CPI-W in 1985. The CPI-U was used to prepare the consumer price tables in this section.

Producer price index (PPI)—This index, dating from 1890, is the oldest continuous statistical series published by BLS. It is designed to measure average changes in prices received by domestic producers of all commodities, at various stages of processing.

The index has undergone several revisions (see *Monthly Labor Review*, February 1962, April 1978, and August 1988). It is now based on approximately 10,000 individual products and groups of products along with about 100,000 quotations per month. Indexes for the net output of manufacturing and mining industries have been added in recent years. Prices used in constructing the index are collected from sellers and generally apply to the first significant large-volume commercial transaction for each commodity—i.e., the manufacturer's or other producer's selling price or the selling price on an organized exchange or at a central market.

The weights used in the index represent the total net selling value of commodities produced or processed in this country. Values are f.o.b. (free on board) production point and are exclusive of excise taxes. Effective with the release of data for January 1988, many important producer price indexes were changed to a new reference base year, 1982 = 100, from 1967 = 100. The reference year of the PPI shipment weights has been taken primarily from the 2002 Census of Manufactures. For further detail regarding

the PPI, see the BLS *Handbook of Methods*, Bulletin 2490 (June 2008), Chapter 14. The PPI Web page is <<http://www.bls.gov/ppi/>>.

BEA price indexes—Chain-weighted price indexes, produced by the Bureau of Economic Analysis (BEA), are weighted averages of the detailed price indexes used in the deflation of the goods and services that make up the gross domestic product (GDP) and its major components. Growth rates are constructed for years and quarters using quantity weights for the current and preceding year or quarter; these growth rates are used to move the index for the preceding period forward a year or quarter at a time. All chain-weighted price indexes are expressed in terms of the reference year value 2000 = 100.

Personal consumption expenditures (PCE) price and quantity indexes are based on market transactions for which there are corresponding price measures. The price index provides a measure of the prices paid by persons for domestic purchases of goods and services, which may be a useful measure of consumer prices for some analytical purposes. PCEs are defined as market value of spending by individuals and not-for-profit institutions on all goods and services. Personal consumption expenditures also include the value of certain imputed goods and services—such as the rental value of owner-occupied homes and compensation paid in kind—such as employer-paid health and life insurance premiums. More information on this index may be found at <http://www.bea.gov/bea/mp_National.htm>.

Measures of inflation—Inflation is defined as a time of generally rising prices for goods and factors of production. The BLS samples prices of items in a representative market basket and publishes the result as the CPI. The media invariably announce the inflation rate as the percent change in the CPI from month to month. A much more meaningful indicator of inflation is the percent change from the same month of the prior year. The PPI measures prices at the producer level only. The PPI shows the same general pattern of inflation as does the CPI but is more volatile. The PPI can be

often tends to foreshadow trends that later occur in the CPI.

Other measures of inflation include the gross domestic purchases chain-weighted price index, the index of industrial materials prices; the Futures Price and Spot Market prices from the Commodity Research Bureau; the Employment Cost Index, the Hourly Compensation Index, or the Unit Labor Cost Index found in Section 12, Labor Force, Employment, and Earnings, as a measure of the change in cost of the labor factor of production; and changes in long-term interest rates that are often used to measure changes in the cost of the capital factor of production.

International price indexes—The BLS International Price Program produces export and import price indexes for non-military goods traded between the United States and the rest of the world.

The export price index provides a measure of price change for all products sold by U.S. residents to foreign buyers. The

import price index provides a measure of price change for goods purchased from other countries by U.S. residents. The reference period for the indexes is 2000 = 100, unless otherwise indicated. The product universe for both the import and export indexes includes raw materials, agricultural products, semifinished manufactures, and finished manufactures, including both capital and consumer goods. Price data for these items are collected primarily by mail questionnaire. In nearly all cases, the data are collected directly from the exporter or importer, although in a few cases, prices are obtained from other sources.

To the extent possible, the data gathered refer to prices at the U.S. border for exports and at either the foreign border or the U.S. border for imports. For nearly all products, the prices refer to transactions completed during the first week of the month. Survey respondents are asked to indicate all discounts, allowances, and rebates applicable to the reported prices, so that the price used in the calculation of the indexes is the actual price for which the product was bought or sold.

Table 708. **Purchasing Power of the Dollar: 1950 to 2008**

[Indexes: PPI, 1982 = \$1.00; CPI, 1982–84 = \$1.00. Producer prices prior to 1961, and consumer prices prior to 1964, exclude Alaska and Hawaii. Producer prices based on finished goods index. Obtained by dividing the average price index for the 1982 = 100, PPI; 1982–84 = 100, CPI base periods (100.0) by the price index for a given period and expressing the result in dollars and cents. Annual figures are based on average of monthly data]

Table 710. **Annual Percent Changes From Prior Year in Consumer Price Indexes (CPI-U)—Selected Areas: 2008**

[Percent changes computed from annual averages of monthly figures published by source. Local area CPI indexes are by-products of the national CPI program. Each local index has a smaller sample size than the national index and is therefore subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Area definitions are those established by the Office of Management and Budget in 1983. For further detail, see the U.S. Bureau of Labor Statistics Handbook of Methods, Bulletin 2285, Chapter 19, the Consumer Price Index, and Report 736, the CPI: 1987 Revision. Minus sign (–) indicates decrease. See also text, this section and Appendix III]

Table 712. **Cost of Living Index—Selected Urban Areas: Annual Average 2008**

[Measures relative price levels for consumer goods and services in participating areas for a mid-management standard of living. **The nationwide average equals 100 and each index is read as a percent of the national average.** The index does not measure inflation, but compares prices at a single point in time. Percents in parentheses represent share of consumer spending devoted to the category and consequently the category's importance or weight in the index. Excludes taxes. For definition of urban areas, see source. For international comparisons, see Table 1322, Section 30]

Urban areas	Com- posite index (100%)	Grocery items (12%)	Housing (29%)	Utilities (10%)	Transpor- tation (11%)	Health care (4%)	Misc. goods and services (33%)

Table 713. Single-Family Housing Price Indexes by State: 2000 to 2008

[Index 1980, 1st quarter = 100. The index reflects average price changes in repeat sales or refinancings on the same properties. Since the data are for the fourth quarter, the index represents the annual percentage change in home values in the fourth quarter of the year shown relative to the fourth quarter of the previous year. The information is obtained by reviewing repeat mortgage transactions on single-family properties whose mortgages have been purchased or securitized by either Fannie Mae or Freddie Mac; for more information on methodology, see Appendix III. Minus sign (–) indicates decrease]

Table 716. **Weekly Food Cost of a Nutritious Diet by Type of Family and Individual: 2008**

[In dollars, As of December. Assumes that food for all meals and snacks is purchased at the store and prepared at home. See source for details on estimation procedures]

Family type	Thrifty plan	Low-cost plan	Moderate-cost plan	Liberal plan
FAMILIES				
Family of two:				
19 to 50 years	83.00	105.60	131.00	163.70
51 to 70 years	79.10	101.50	124.90	150.10
Family of four:				
Couple, 19 to 50 years and children—				
2 to 3 and 4 to 5 years	120.60	152.90	188.60	233.40
6 to 8 and 9 to 11 years	138.70	179.60	224.10	272.20
INDIVIDUALS ¹				
Child:				
1 year	20.70	27.50	31.40	38.00
2 to 3 years	22.10	27.80	33.60	40.90
4 to 5 years	23.00	29.10	35.90	43.70
6 to 8 years	29.30	39.60	48.60	57.20
9 to 11 years	33.90	44.00	56.40	66.30
Male:				
12 to 13 years	35.90	50.20	62.40	73.50
14 to 18 years	37.30	52.00	64.80	74.60
19 to 50 years	40.00	51.30	64.10	78.40
51 to 70 years	36.60	48.70	59.50	72.10
71 years and over	36.70	48.20	59.70	73.30
Female:				
12 to 13 years	36.00	43.90	52.50	63.80
14 to 18 years	35.70	44.10	53.20	65.40
19 to 50 years	35.50	44.70	54.90	70.40
51 to 70 years	35.20	43.60	54.10	64.40
71 years and over	34.60	43.20	53.90	64.70

¹ The costs given are for individuals in 4-person families. For individuals in other size families, the following adjustments are suggested: 1-person, add 20 percent; 2-person, add 10 percent; 3-person, add 5 percent, 5- or 6-person, subtract 5 percent; 7- (or more) person, subtract 10 percent.

Table 719. **Commodity Research Bureau Futures Price Index: 1990 to 2008**

[1967 = 100. Index computed daily. Represents unweighted geometric average of commodity futures prices (through 6 months forward) of 17 major commodity futures markets. Represents end of year index]

Item	1990	1995	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008
All commodities	222.6	243.2	205.1	227.8	190.6	234.5	255.3	283.9	347.9	394.9	476.1	363.1
Softs ¹	276.0	354.4	280.9	254.4	252.8	303.7	250.5	343.5	420.5	475.9	467.5	487.2
Industrials	245.5	272.5	192.9	211.0	141.8	176.6	256.6	232.1	302.5	368.8	418.3	475.4
Grains and oilseeds ²	171.2	218.6	156.6	174.9	159.0	188.2	225.8	177.0	193.8	279.1	427.0	545.5
Energy	246.0	180.0	221.0	355.8	204.9	320.7	358.7	457.3	705.3	591.6	825.1	1263.2
Livestock and meats	226.2	192.4	239.6	253.6	247.4	251.0	237.8	303.6	300.3	294.6	297.7	337.0
Metals (precious)	257.8	276.0	253.4	265.7	246.8	289.1	364.1	396.6	478.1	611.9	773.6	894.6

¹ Prior to 1997, reported as imported. Softs include commodities that are grown and not mined such as coffee, cocoa, lumber, cotton, and sugar. ² Prior to 1997, reported as grains.

Table 721. **Producer Price Indexes by Stage of Processing and Commodity:**
1990 to 2008

[1982 = 100, except as indicated. See Appendix III]

Stage of processing	1990	1995	2000	2004	2005	2006	2007	2008 ¹
Finished goods	119.2	127.9	138.0	148.5	155.7	160.4	166.6	177.1
Finished consumer goods	118.2	125.6	138.2	151.7	160.4	166.0	173.5	186.3
Finished consumer foods.	124.4	129.0	137.2	152.7	155.7	156.7	167.0	178.4
Fresh fruits and melons	118.1	85.8	91.4	104.9	102.8	111.0	123.4	123.0
Fresh and dry vegetables	118.1	144.4	126.7	129.4	142.6	153.3	165.5	172.9
Eggs for fresh use (Dec. 1991 = 100)	(NA)	86.3	84.9	100.0	79.6	90.0	132.6	152.4
Bakery products	141.0	164.3	182.3	196.3	201.1	207.7	216.6	237.5
Milled rice	102.5	113.1	101.2	135.5	120.1	136.1	155.0	251.6
Pasta products (June 1985 = 100).	114.1	125.0	121.6	127.3	127.9	128.3	136.3	183.4
Beef and veal	116.0	100.9	113.7	141.2	147.4	142.3	146.1	155.6
Pork	119.8	101.5	113.4	132.7	131.9	128.0	133.3	131.8
Processed young chickens	111.0	113.5	110.4	138.9	136.2	118.1	139.0	143.1
Processed turkeys	107.6	104.9	98.7	107.8	105.1	103.6	110.2	120.2
Finfish and shellfish	147.2	170.8	198.1	206.3	222.6	237.4	242.8	255.1
Dairy products	117.2	119.7	133.7	155.9	154.5	147.5	175.7	182.8
Processed fruits and vegetables	124.7	122.4	128.6	135.2	140.4	148.9	157.4	167.0
Soft drinks	122.3	133.1	144.1	156.5	159.1	162.8	166.7	174.2
Roasted coffee	113.0	146.5	133.5	130.1	151.1	153.6	163.7	179.5
Shortening and cooking oils	123.2	142.5	132.4	193.7	176.7	183.7	211.7	291.4
Finished consumer goods excluding foods	115.3	124.0	138.4	150.9	161.9	169.2	175.6	189.0
Alcoholic beverages	117.2	128.5	140.6	152.8	158.5	160.1	160.2	166.2
Apparel	117.5	124.2	127.4	125.6	125.6	125.9	127.0	127.8
Women's/girls/infants' cut & sew apparel (Dec. 2003 = 100).	(NA)	(NA)	(NA)	100.2	100.3	100.3	101.1	100.8
Men's and boy's cut and sew apparel (Dec. 2003 = 100).	(NA)	(NA)	(NA)	99.9	98.7	98.0	98.6	99.6
Textile house furnishings	109.5	119.5	122.0	123.4	122.9	123.2	125.3	126.9
Footwear	125.6	139.2	144.9	146.2	148.1	149.3	151.6	157.0
Residential electric power (Dec. 1990 = 100).	(NA)	111.8	110.8	121.4	126.4	134.8	138.8	146.0
Residential gas (Dec. 1990 = 100)	(NA)	104.4	135.5	183.2	216.8	226.7	224.9	250.4
Gasoline	78.7	63.7	94.6	128.1	168.6	197.2	221.9	263.0
Fuel oil No. 2.	73.3	56.6	93.5	120.7	178.4	207.4	223.7	306.8
Soaps and synthetic detergents	117.7	122.9	128.2	132.9	134.6	142.7	144.9	154.4
Cosmetics and other toilet preparations	121.6	129.0	137.4	140.6	143.0	145.2	147.6	147.8
Tires, tubes, and tread	96.8	100.2	93.0	102.5	108.1	114.7	118.5	128.0
Sanitary papers and health products	135.3	144.4	146.7	148.5	154.6	160.1	161.8	170.9
Book publishing	153.4	185.0	218.2	253.1	264.0	275.2	285.0	296.6
Household furniture	125.1	141.8	152.7	160.5	166.5	172.3	174.6	181.0
Floor coverings	119.0	123.7	129.6	136.7	146.4	154.5	156.6	160.5
Household appliances	110.8	112.4	107.3	101.5	103.3	104.1	105.2	107.2
Home electronic equipment	82.7	78.9	71.8	65.2	62.6	60.3	58.2	57.0
Household glassware	132.5	153.2	166.0	171.4	174.7	172.3	177.0	(NA)
Household flatware	122.1	138.3	142.6	145.4	147.7	152.7	186.8	(NA)
Lawn and garden equipment, except tractors	123.0	130.4	132.0	134.5	134.5	134.9	137.0	140.4
Passenger cars	118.3	134.1	132.8	131.7	131.8	128.0	126.2	128.6
Toys, games, and children's vehicles	118.1	124.3	121.9	125.1	127.0	128.5	131.0	134.4
Sporting and athletic goods	112.6	122.0	126.1	123.4	124.6	126.1	129.9	129.8
Tobacco products	221.4	231.3	397.2	434.0	457.8	460.0	489.1	508.7
Mobile homes	117.5	145.6	161.3	186.6	200.8	208.8	211.0	219.1
Jewelry, platinum, and karat gold	122.8	127.8	127.2	135.3	138.6	148.6	153.2	164.2
Costume jewelry and novelties	125.3	135.1	141.6	147.9	153.5	154.2	156.7	159.5
Capital Equipment	122.9	136.7	138.8	141.4	144.6	146.9	149.5	153.7
Agricultural machinery and equipment	121.7	142.9	153.7	165.9	174.7	178.9	184.3	192.6
Construction machinery and equipment	121.6	136.7	148.6	158.5	168.3	175.4	179.6	185.4
Metal cutting machine tools	129.8	148.0	161.9	151.4	155.1	163.4	165.8	170.4
Metal forming machine tools.	128.7	145.7	161.8	171.6	178.9	183.3	184.4	193.6
Pumps, compressors, and equipment	119.2	139.4	154.1	167.5	178.5	186.0	195.0	205.9
Electronic computers (Dec. 2004 = 100).	(NA)	850.1	261.6	107.3	85.5	66.5	51.6	40.8
Textile machinery	128.8	146.7	156.2	158.1	160.5	161.7	162.5	165.0
Paper industries machinery (June 1982 = 100)	134.8	151.0	164.7	173.7	178.1	180.6	183.4	188.5
Printing trades machinery	124.9	133.6	142.1	143.4	144.3	146.5	150.5	152.3
Transformers and power regulators	120.9	128.9	135.8	135.7	150.3	172.5	194.9	216.0
Communication/related equip.(Dec. 1985 = 100)	106.1	112.1	110.6	103.3	102.5	102.4	103.2	104.8
X-ray and electromedical equipment	109.8	111.8	101.5	97.5	95.7	94.9	92.8	91.6
Mining machinery and equipment	121.0	135.6	146.1	163.4	175.9	183.9	190.9	205.2
Office and store machines and equipment	109.5	111.5	112.7	113.2	115.1	114.7	114.6	121.2
Commercial furniture.	133.4	148.2	158.4	165.6	172.7	177.0	181.5	189.9
Light motor trucks.	130.0	159.0	157.6	151.3	148.4	143.3	145.3	145.4
Heavy motor trucks.	120.3	144.1	148.0	155.7	162.4	169.1	177.2	182.0
Truck trailers	110.8	131.7	139.4	148.1	157.1	164.5	169.4	176.9
Civilian aircraft (Dec. 1985 = 100)	115.3	141.8	159.6	190.5	202.2	212.4	219.6	230.1
Ships (Dec. 1985 = 100)	110.1	132.8	146.9	171.4	176.6	183.2	192.1	199.2
Railroad equipment.	118.6	134.8	135.7	143.9	160.4	169.4	176.4	180.7
Intermediate materials, supplies, and components.	114.5	124.9	129.2	142.6	154.0	164.0	170.7	188.6
Intermediate foods and feeds	113.3	114.8	111.7	137.1	133.8	135.2	154.4	182.2
Flour	103.6	123.0	103.8	129.0	133.6	145.8	178.4	239.4
Refined sugar	122.7	119.3	110.6	120.7	124.9	149.9	132.6	137.6
Soft drink beverage bases (December 1985 = 100)	126.2	148.3	167.1	176.2	180.4	188.4	196.0	210.2
Prepared animal feeds	107.4	109.1	102.9	124.8	115.6	118.7	142.7	183.9
See footnotes at end of table.								

Table 721. **Producer Price Indexes by Stage of Processing and Commodity:**
1990 to 2008—Con.

[1982 = 100, except as indicated. See Appendix III]

Stage of processing	1990	1995	2000	2004	2005	2006	2007	2008 ¹
Intermediate materials less foods and feeds.	114.5	125.5	130.1	143.0	155.1	165.4	171.5	189.0

Air conditioning and refrigeration equipment	122.1	130.2	135.3	139.4	146.2	150.1	157.3	162.8
Ball and roller bearings	130.6	152.0	168.8	177.1	187.1	193.1	199.8	212.5
Wiring devices	132.2	147.2	152.9	169.0	176.6	188.2	194.5	206.6
Motors, generators, motor generator sets	132.9	143.9	146.2	149.8	157.8	165.0	172.9	181.4
Switchgear and switchboard equipment	124.4	140.3	153.0	163.8	170.2	178.6	188.5	195.3
Electronic components and accessories	118.4	113.6	97.1	88.8	87.0	88.5	82.3	77.2
Internal combustion engines	120.2	135.6	143.8	145.8	147.7	152.5	154.7	157.1
Flat glass	107.5	113.2	109.7	108.6	111.0	113.5	114.2	115.9
Cement	103.7	128.1	150.1	156.8	176.4	199.3	209.7	209.7
Concrete products	113.5	129.4	147.8	161.2	177.2	195.1	203.5	210.7
Asphalt felts and coatings	97.1	100.0	104.1	117.7	130.8	144.5	145.7	186.3
Gypsum products	105.2	154.5	201.4	198.8	229.6	274.9	233.0	213.0
Glass containers	120.4	130.5	127.4	144.4	146.4	152.8	162.0	171.8
Motor vehicle parts	111.2	116.0	113.6	112.0	113.1	116.3	117.9	119.8
Aircraft engines and engine parts (Dec. 1985 = 100)	113.5	132.8	141.0	163.0	165.9	172.4	178.9	185.8
Photographic supplies	127.6	126.8	125.2	115.1	120.1	121.6	122.9	125.5
Medical/surgical/personal aid devices	127.3	141.3	146.0	157.8	159.2	161.4	163.1	165.7
Crude materials for further processing	108.9	102.7	120.6	159.0	182.2	184.8	207.1	251.7
Crude foodstuffs and feedstuffs	113.1	105.8	100.2	127.0	122.7	119.3	146.7	163.5
Wheat	87.6	118.6	80.3	106.0	102.7	116.9	172.1	235.5
Corn	100.9	109.0	76.4	97.5	75.9	95.6	141.5	199.1
Slaughter cattle	122.5	99.5	104.1	126.2	131.5	126.2	136.1	136.1
Slaughter hogs	94.1	70.2	72.7	87.8	82.7	77.2	76.1	78.0
Slaughter broilers/fryers	119.5	129.1	127.6	188.5	181.0	156.1	199.9	210.7
Slaughter turkeys	116.9	120.3	120.7	122.0	131.1	140.5	153.3	165.9
Fluid milk	100.8	93.6	92.0	120.1	113.5	96.7	143.3	137.5
Soybeans	100.8	102.2	83.4	130.0	102.6	96.8	137.9	203.9
Crude nonfood materials	101.5	96.8	130.4	179.2	223.4	230.6	246.3	313.5
Raw cotton	118.2	156.2	95.2	85.6	78.9	79.7	83.1	99.1
Coal	97.5	95.0	87.9	109.2	116.8	126.6	130.7	161.7
Natural gas	80.4	66.6	155.5	245.9	335.4	280.3	273.8	341.9
Crude petroleum	71.0	51.1	85.2	108.2	150.1	176.0	192.6	275.6
Logs and timber	142.8	220.4	196.4	193.3	197.4	201.2	217.1	216.8
Wastepaper	138.9	371.1	282.5	231.4	230.9	234.8	368.7	368.5
Iron ore	83.3	91.8	94.8	98.2	116.9	132.5	128.8	142.5
Iron and steel scrap	166.0	202.7	142.1	323.7	289.8	335.2	406.8	565.6
Nonferrous metal ores (Dec. 1983 = 100)	98.3	101.6	68.0	113.7	150.0	215.9	243.5	256.5
Copper base scrap	181.3	193.5	123.7	186.5	258.6	436.8	485.2	492.6
Aluminum base scrap	172.6	209.4	177.0	194.1	210.1	275.7	274.7	272.7
Construction sand, gravel, and crushed stone	125.4	142.3	163.1	183.3	195.8	213.9	232.4	247.8
Industrial sand	117.6	132.5	146.0	165.3	174.4	183.2	190.9	217.9

Table 722. **Producer Price Indexes for the Net Output of Selected Industries: 2004 to 2008**

[Indexes are based on selling prices reported by establishments of all sizes by probability sampling. Manufacturing industries selected by shipment value. N.e.c.= not elsewhere classified. See text, Section 22. See Appendix III]

Industry	2002 NAICS code ¹	Index base ²	2004	2005	2006	2007	2008 ³
Logging industries	113310	12/81	175.3	179.2	176.6	175.1	171.5
Total mining industries	21	12/84	153.4	201.0	209.6	220.1	274.2
Crude petroleum & natural gas extraction	211111	06/02	183.4	253.5	254.2	261.5	348.3
Natural gas liquid extraction	211112	06/02	216.5	285.4	259.4	286.7	345.0
Bituminous coal & lignite surface mining	212111	12/01	107.1	111.9	117.3	120.9	140.3
Anthracite mining	212113	12/79	180.9	205.4	234.7	240.9	268.1
Iron ore mining	212210	12/84	97.2	115.7	132.1	127.5	141.0
Gold ore mining	212221	06/85	121.6	131.7	177.2	203.0	208.4
Crushed and broken granite mining and quarrying	212313	12/83	203.7	217.3	243.6	279.3	305.9
Construction sand and gravel mining	212321	06/82	195.0	209.9	229.2	247.0	262.7
Clay and ceramic and refractory minerals mining	212325	06/84	144.4	148.3	156.9	163.4	174.8
Drilling oil and gas wells	213111	12/85	168.0	258.8	376.6	360.6	367.7
Nonmetallic minerals support activity (except fuels)	213115	06/85	119.6	127.5	137.1	140.2	146.1
Total manufacturing industries	31–33	12/84	142.9	150.8	156.9	162.9	175.8
Dog & cat food mfg.	311111	12/85	144.0	145.8	147.7	155.2	175.9
Flour milling	311211	06/83	117.4	117.5	127.5	153.9	202.4
Rice milling	311212	06/84	113.1	102.1	114.2	129.2	209.4
Chocolate & confectionery mfg. from cacao beans	311320	06/83	155.0	157.5	161.1	166.0	181.4
Frozen fruit, juice, & vegetable mfg.	311411	06/81	149.3	156.0	170.7	174.9	178.9
Frozen specialty food mfg.	311412	12/82	142.1	143.6	144.3	145.5	154.2
Fruit and vegetable canning	311421	06/81	146.5	151.4	155.8	165.3	177.3
Ice cream and frozen dessert mfg.	311520	06/83	166.0	168.2	171.5	177.7	184.4
Animal (except poultry) slaughtering	311611	12/80	137.8	141.0	136.4	142.7	151.1
Meat processed from carcasses	311612	12/82	132.9	136.6	137.2	139.5	144.8
Poultry processing	311615	12/81	137.5	135.3	123.7	139.5	145.0
Coffee and tea manufacturing	311920	06/81	142.2	161.0	164.3	173.8	189.9
Spice and extracts manufacturing	311942	12/03	100.3	99.1	99.7	102.3	108.4
Soft drinks manufacturing	312111	06/81	165.3	168.6	173.3	177.4	185.6
Breweries	312120	06/82	151.9	158.4	158.2	156.0	163.3
Wineries	312130	12/83	140.0	144.8	152.7	155.7	159.5
Distilleries	312140	06/83	164.7	165.5	167.6	175.3	187.5
Cigarettes	312221	12/82	412.6	437.0	440.1	470.2	489.5
Men's/boys' cut & sew trouser/slack/jean mfg.	315224	12/81	126.6	123.2	121.0	122.3	123.0
Women's/girls' cut & sew dress mfg.	315233	12/80	124.9	123.7	123.2	120.8	122.7
Sawmills	321113	12/80	163.4	162.0	158.1	152.0	143.4
Wood preservation	321114	06/85	167.7	175.7	169.5	163.8	165.6
Hardwood veneer & plywood manufacturing	321211	06/85	143.6	146.2	149.8	151.1	153.0
Wood window & door mfg.	321911	12/03	101.9	103.1	106.8	107.3	107.7
Manufactured homes (mobile homes) mfg.	321991	06/81	190.0	204.4	212.5	214.7	222.9
Paper (except newsprint) mills	322121	12/03	102.4	108.4	112.5	116.2	125.0
Newsprint mills	322122	12/03	104.0	115.7	124.7	106.8	119.2
Paperboard mills	322130	12/82	190.1	196.2	212.9	224.4	242.9
Book printing	323117	12/83	151.5	154.9	158.3	158.6	159.1
Petroleum refineries	324110	06/85	151.5	205.3	240.9	266.9	338.6
Petroleum lubricating oils and greases	324191	12/80	199.4	231.2	284.8	304.8	356.4
Plastics material and resins manufacturing	325211	12/80	192.0	228.5	236.1	232.4	256.5
Synthetic rubber manufacturing	325212	06/81	131.6	150.6	161.6	170.2	213.0
Nitrogenous fertilizer manufacturing	325311	12/79	203.9	236.9	245.9	278.5	419.7
Phosphatic fertilizer manufacturing	325312	12/79	161.3	173.3	183.8	257.4	575.5
Pharmaceutical preparation mfg.	325412	06/81	360.1	378.7	398.0	413.8	440.9
Plastics pipe and pipe fitting manufacturing	326122	06/93	140.8	171.9	214.0	197.2	214.3
Cement manufacturing	327310	06/82	155.4	175.2	197.6	208.4	207.7
Steel investment foundries	331512	06/81	197.7	204.8	216.7	235.4	235.7
Steel foundries (except investment)	331513	06/81	146.2	160.1	170.1	183.7	193.7
Aluminum die-casting foundries	331521	06/91	114.1	116.4	125.1	126.4	132.8
Iron & steel forging	332111	12/83	117.5	128.1	133.4	140.4	150.6
Hand and edge tools, except machine tools and handsaws	332212	06/83	168.8	177.0	183.7	188.9	196.8
Saw blade & handsaw mfg.	332213	06/83	142.9	146.0	150.2	152.8	158.2
Metal window and door manufacturing	332321	06/83	166.5	175.2	183.6	188.1	196.1
Sheetmetal work mfg.	332322	12/82	159.4	165.6	171.4	176.8	187.8
Heating equipment (except warm air furnaces) mfg.	333414	06/80	206.2	215.4	222.0	231.2	245.6
Laboratory apparatus and furniture	339111	12/91	141.2	148.1	152.5	158.8	165.9
Surgical and medical instrument mfg.	339112	06/82	134.6	135.2	133.9	134.5	136.2
Services industries							
Grocery (except convenience) stores	445110	12/99	123.6	132.1	135.6	140.7	150.6
Beer, wine, and liquor stores	445310	06/00	110.7	111.0	111.4	113.2	120.6
Gasoline stations with convenience stores	447110	12/03	102.5	104.3	109.9	123.0	139.3
Scheduled passenger air transportation	481111	12/89	205.8	217.1	227.7	234.5	257.6
Scheduled freight air transportation	481112	12/03	100.2	104.9	108.5	109.0	128.5
General freight trucking, long-distance	484121	12/03	102.7	108.6	112.0	186.1	217.0
Pipeline transportation of crude oil	486110	06/86	115.2	125.5	135.3	114.2	126.8
Pipeline transportation of refined petroleum products	486910	06/86	116.0	120.3	123.7	114.8	123.5
Marine cargo handling	488320	12/91	113.2	115.1	117.9	112.9	116.7
United States Postal Service	491110	06/89	155.0	155.0	164.7	158.2	175.3
Nursing care facilities	623110	12/94	155.6	161.4	166.1	158.8	163.5

Table 723. Chain-Type Price Indexes for Personal Consumption Expenditures by Type of Expenditure: 1990 to 2007

[2000 = 100. For explanation of "chain-type," see text, Section 13. See also Table 661]

Type of expenditure	1990	1995	2003	2004	2005	2006	2007
Total expenditures ¹	80.5	91.6	105.6	108.4	111.6	114.7	117.7
Food and tobacco ¹	78.2	86.8	107.9	111.1	113.8	116.5	121.1
Food purchased for off-premise consumption	82.7	90.4	106.2	109.5	111.4	113.3	117.7
Purchased meals and beverages ²	78.6	88.2	108.2	111.5	115.0	118.6	123.0
Tobacco products	46.7	57.6	118.8	121.0	127.3	131.6	140.3
Clothing, accessories, and jewelry ¹	105.6	105.7	95.1	95.3	95.0	95.5	96.0
Shoes	103.7	106.2	96.6	96.3	99.0	99.8	98.9
Clothing	109.4	106.3	92.3	92.0	90.4	89.8	89.1
Jewelry and watches	114.4	117.9	93.9	94.5	93.1	95.4	100.1
Personal care	83.1	91.8	103.4	104.6	106.1	108.0	110.4
Housing ¹	74.5	86.1	110.4	113.2	116.1	120.3	124.7
Owner-occupied nonfarm dwellings—space rent	74.8	86.2	110.7	113.2	115.7	119.8	123.8
Tenant-occupied nonfarm dwellings—space rent	75.4	86.2	111.3	114.1	117.6	121.7	126.9
Household operation ¹	89.3	96.6	102.0	102.8	106.2	109.2	110.5
Furniture ³	91.9	99.6	95.0	94.7	93.7	94.5	93.6
Semidurable house furnishings ⁴	112.0	111.0	87.7	83.9	81.7	76.1	70.9
Cleaning and polishing preparations	84.2	89.5	102.8	103.2	105.3	109.7	111.5
Household utilities	80.9	90.3	112.3	118.1	130.1	140.9	145.5
Electricity	91.5	100.9	109.3	111.4	118.1	132.4	137.3
Gas	73.2	77.3	123.8	134.3	160.0	163.8	163.1
Water and other sanitary services	66.1	87.1	110.2	116.7	123.1	129.1	135.4
Fuel oil and coal	76.9	69.9	109.7	125.4	159.6	180.3	192.3
Telephone and telegraph	103.8	107.0	97.2	95.2	94.4	95.1	97.0
Medical care ¹	70.1	88.0	110.3	114.6	118.4	122.1	126.1
Drug preparations and sundries ⁵	72.7	87.2	112.0	115.1	118.5	123.2	124.9
Physicians	71.2	92.3	104.3	106.5	108.5	109.4	113.7
Dentists	60.6	80.1	113.2	118.7	125.3	131.8	138.7
Hospitals and nursing homes ⁶	70.1	87.7	112.8	117.6	122.4	127.2	131.8
Health insurance	62.0	82.4	114.2	126.8	133.5	137.5	143.8
Medical care ⁷	60.3	84.2	120.0	134.4	139.1	143.2	148.7
Personal business ¹	76.0	90.3	105.9	109.2	112.3	115.3	118.1
Expense of handling life insurance ⁸	61.7	75.2	110.4	116.6	120.0	124.3	131.2
Legal services	65.7	80.5	116.5	122.0	127.1	131.5	136.9
Funeral and burial expenses	63.7	82.1	113.0	117.8	121.8	128.1	134.4
Transportation	79.9	90.8	101.8	106.1	113.6	119.2	122.5
User-operated transportation ¹	79.5	90.8	102.4	107.0	114.8	120.5	123.9
New autos	87.5	99.9	96.6	96.0	96.7	97.6	97.2
Net purchases of used autos	69.1	95.6	97.4	98.0	101.0	102.7	100.6
Tires, tubes, accessories, etc.	102.2	101.8	105.2	105.7	108.2	112.6	116.4
Repair, greasing, washing, parking, storage, rental, and leasing	77.6	90.4	108.0	109.6	112.8	116.7	120.0

¹ Includes other types not shown separately. ² Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments; hotels; dining and buffet cars; schools; school fraternities; institutions; clubs; and industrial lunch rooms. Includes meals and beverages consumed both on and off-premise. ³ Includes mattresses and bedsprings. ⁴ Consists largely of textile house furnishings including piece goods allocated to house furnishing use. Also includes lamp shades, brooms, and brushes. ⁵ Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services. ⁶ Consists of (1) current expenditures (including consumption of fixed capital) of nonprofit hospitals and nursing homes and (2) payments by patients to proprietary and government hospitals and nursing homes. ⁷ Consists of (1) premiums, less benefits and dividends, for health hospitalization and accidental death and dismemberment insurance provided by commercial insurance carriers and (2) administrative expenses (including consumption of fixed capital) of Blue Cross and Blue Shield plans and of other independent prepaid and self-insured health plans. ⁸ Consists of (1) operating expenses of life insurance carriers and private noninsured pension plans and (2) premiums less benefits and dividends of fraternal benefit societies. Excludes expenses allocated by commercial carriers to accident and health insurance.

Table 725. Import and Export Price Indexes by End-Use Category: 1990 to 2008

[As of June. Import indexes are weighted by the 2000 Tariff Schedule of the United States Annotated, a scheme for describing and reporting product composition and value of U.S. imports. Import prices are based on U.S. dollar prices paid by importer. Export indexes are weighted by 2000 export values according to the Schedule B classification system of the U.S. Census Bureau. Prices used in these indexes were collected from a sample of U.S. manufacturers of exports and are factory transaction prices, except as noted. Minus sign (–) indicates decrease]

Year	Index (2000 = 100)						Percent change ¹					
	Imports			Exports			Imports			Exports

Section 15

Business Enterprise

This section relates to the place and behavior of the business firm and to business initiative in the American economy. It includes data on the number, type, and size of businesses; financial data of domestic and multinational U.S. corporations; business investments, expenditures, and profits; and sales and inventories.

The principal sources of these data are the *Survey of Current Business*, published by the Bureau of Economic Analysis (BEA), the Web site of the Board of Governors of the Federal Reserve System, (<<http://www.federalreserve.gov/econresdata/default.htm>>), the annual *Statistics of Income (SOI)* reports of the Internal Revenue Service (IRS), and the Census Bureau's Economic Census, *County Business Patterns*, *Quarterly Financial Report for Manufacturing, Mining, and Trade Corporations (QFR)*, *Survey of Business Owners*, and *Annual Capital Expenditures Survey*.

Business firms—A firm is generally defined as a business organization under a single management and may include one or more establishments. The terms firm, business, company, and enterprise are used interchangeably throughout this section. A firm doing business in more than one industry is classified by industry according to the major activity of the firm as a whole.

The IRS concept of a business firm relates primarily to the legal entity used for tax reporting purposes. A sole proprietorship is an unincorporated business owned by one person and may include large enterprises with many employees and hired managers and part-time operators. A partnership is an unincorporated business owned by two or more persons, each of whom has a financial interest in the business. A corporation is a business that is legally incorporated under state laws. While many corporations file consolidated tax returns, most corporate tax returns

represent individual corporations, some of which are affiliated through common ownership or control with other corporations filing separate returns.

Economic census—The economic census is the major source of facts about the structure and functioning of the nation's economy. It provides essential information for government, business, industry, and the general public. It furnishes an important part of the framework for such composite measures as the gross domestic product estimates, input/output measures, production and price indexes, and other statistical series that measure short-term changes in economic conditions. The Census Bureau takes the economic census every 5 years, covering years ending in "2" and "7."

The economic census is collected on an establishment basis. A company operating at more than one location is required to file a separate report for each store, factory, shop, or other location. Each establishment is assigned a separate industry classification based on its primary activity and not that of its parent company. Establishments responding to the establishment survey are classified into industries on the basis of their principal product or activity (determined by annual sales volume). The statistics issued by industry in the 2007 Economic Census are classified primarily on the 2007 North American Industry Classification System (NAICS), and, to a lesser extent, on the 2002 NAICS used in the previous census (see below).

More detailed information about the scope, coverage, methodology, classification system, data items, and publications for each of the economic censuses and related surveys is published in the *2007 Economic Census User Guide* at <http://www.census.gov/econ/census07/www/user_guide/>.

Data from the 2007 Economic Census are released through the Census Bureau's American FactFinder® service on the Census Bureau Web site. For more information, see <<http://www.census.gov/econ/census07/>>.

Survey of Business Owners—The Survey of Business Owners (SBO) provides statistics that describe the composition of U.S. businesses by gender, Hispanic or Latino origin, and race. Data from SBO are published in a series of reports: *American Indian- and Alaska Native-Owned Firms*, *Asian-Owned Firms*, *Black-Owned Firms*, *Hispanic-Owned Firms*, *Native Hawaiian- and Other Pacific Islander-Owned Firms*, *Women-Owned Firms*, and *Company Summary*. Data are presented by industry classifications and/or geographic area and size of firm (employment and receipts). The reports include totals for all U.S. businesses based on the 2002 Economic Census and estimates of business ownership by gender, Hispanic or Latino origin, and race based on the 2002 SBO. Each owner had the option of selecting more than one race and therefore is included in each race selected. For more information, see <<http://www.census.gov/econ/sbo/>>.

North American Industry Classification System (NAICS)—NAICS is the standard used by Federal statistical agencies in classifying business establishments for the purpose of collecting, analyzing, and publishing statistical data related to the U.S. business economy. NAICS was developed under the auspices of the Office of Management and Budget (OMB), and adopted in 1997 to replace the Standard Industrial Classification (SIC) system. The official 2007 U.S. NAICS Manual includes definitions for each industry, background information, tables showing changes between 2002 and 2007, and a comprehensive index. For more information, see <<http://www.census.gov/eos/www/naics/>>.

Changes between 2002 NAICS and 2007 NAICS are relatively minor, but do affect totals for sectors 52 (finance and insurance), 53 (real estate, rental, and leasing),

54 (professional, scientific, and technical services), and 56 (admin/support waste mgt/remediation services). Nearly all industries are comparable from 2002 to 2007 NAICS classifications. Several industries in the Information sector have been consolidated.

Quarterly Financial Report—The Quarterly Financial Report (QFR) program publishes quarterly aggregate statistics on the financial conditions of U.S. corporations. The QFR requests companies to report estimates from their statements of income and retained earnings, and balance sheets. The statistical data are classified and aggregated by type of industry and asset size. The QFR sample includes manufacturing companies with assets of \$250 thousand and above, and mining, wholesale, and retail companies with assets of \$50 million and above. The data are available quarterly in the *Quarterly Financial Report for Manufacturing, Mining, and Trade Corporations* on the Internet at <<http://www.census.gov/econ/qfr/>>.

Multinational Companies—BEA collects financial and operating data on U.S. multinational companies. These data provide a picture of the overall activities of foreign affiliates and U.S. parent companies, using a variety of indicators of their financial structure and operations. The data on foreign affiliates cover the entire operations of the affiliate, irrespective of the percentage of U.S. ownership. These data cover items such as sales, value added, employment and compensation of employees, capital expenditures, exports and imports, and research and development expenditures. Separate tabulations are available for all affiliates and for affiliates that are majority-owned by their U.S. parent(s). More information is available at <<http://www.bea.gov/international/index.htm#omc>>.

Statistical reliability—For a discussion of statistical collection, estimation, and sampling procedures and measures of reliability applicable to data from the Census Bureau and the Internal Revenue Service, see Appendix III.

Table 728. Number of Tax Returns, Receipts, and Net Income by Type of Business: 1990 to 2006

[14,783 represents 14,783,000. Covers active enterprises only. Figures are estimates based on sample of unaudited tax returns; see Appendix III]

2006	22,075	2,947	5,841	1,278	4,131	26,070	278	667	1,933

¹ Excludes investment income except for partnerships and corporations in finance, insurance, and real estate before 1998. Beginning 1998, finance and insurance, real estate, and management of companies included investment income for partnerships and corporations. Excludes investment income for S corporations, for definition, see footnote 1, Table 737. ² Net income (less loss) is defined differently by form of organization, basically as follows: (a) Proprietorships: Total taxable receipts less total business deductions, including cost of sales and operations, depletion, and certain capital expensing, excluding charitable contributions and owners' salaries; (b) Partnerships: Total taxable receipts (including investment income except capital gains) less deductions, including cost of sales and operations and certain payments to partners, excluding charitable contributions, oil and gas depletion, and certain capital expensing; (c) Corporations: Total taxable receipts (including investment income, capital gains, and income from foreign subsidiaries deemed received for tax purposes, except for S corporations) less business deductions, including cost of sales and operations, depletion, certain capital expensing, and officers' compensation excluding S corporation charitable contributions and investment expenses; net income is before income tax.

Table 746. **Employer Firms, Employment, and Annual Payroll by Employment Size of Firm and Industry: 2006**

[6,022 represents 6,022,000. A firm is an aggregation of all establishments owned by a parent company (within a geographic location and/or industry) with some annual payroll. A firm may be a single location or it can include multiple locations. Employment is measured in March and payroll is annual leading to some firms with zero employment. Numbers in parentheses represent North American Industry Classification System codes, 2002; see text this section]

Industry and data type	Unit	Total	All industries—employment size of firm						
			0 to 4	5 to 9	10 to 19	20 to 99	100 to 499	Less than 500	500 or more

Table 747. **Employer Firms, Employment, and Payroll by Employment Size of Firm and State: 2000 and 2006**

[5,652.5 represents 5,652,500. A firm is an aggregation of all establishments owned by a parent company (within a state) with some annual payroll. A firm may be a single location or it can include multiple locations. Employment is measured in March and payroll is annual leading to some firms with zero employment]

2002	134.0	137.6	74.6	82.7	76.6	70.7	72.7
2003	133.7	137.4	75.8	84.4	77.7	71.6	73.7
2004	133.4	137.0	77.9	86.1	79.8	73.3	76.2
2005	133.8	138.1	80.1	86.5	81.7	76.0	78.6
2006	135.7	140.1	80.9	88.3	81.7	77.1	79.4
2007	138.1	142.7	80.6	87.8	81.0	77.5	79.0
2008	140.3	145.4	77.6	86.6	77.3	74.1	75.1

¹ Crude processing, covers a relatively small portion of total industrial capacity and consists of logging (NAICS 1133), much of mining (excluding stone, sand, and gravel mining, and oil and gas drilling, which are NAICS 21231, 21221–2, and 213111) and some basic manufacturing industries, including basic chemicals (NAICS 3251); fertilizers, pesticides, and other agricultural chemicals (NAICS 32531,2); pulp, paper, and paperboard mills (NAICS 3221); and alumina, aluminum, and other nonferrous production and processing mills (NAICS 3313,4). ² Primary and semifinished processing loosely corresponds to the previously published aggregate, primary processing. Includes utilities and portions of several 2-digit SIC industries included in the former advanced processing group. These include printing and related support activities (NAICS 3231); paints and adhesives (NAICS 3255); and newspaper, periodical, book, and directory publishers (NAICS 5111). ³ Finished processing generally corresponds to the previously published aggregate, advanced processing. Includes oil and gas well drilling and carpet and rug mills.

Table 772. U.S. Multinational Companies—Selected Characteristics: 2006

[Preliminary. In billions of dollars (18,521 represents \$18,521,000,000,000), except as indicated. Consists of nonbank U.S. parent companies and their nonbank foreign affiliates. U.S. parent comprises the domestic operations of a multinational and is a U.S. person that owns or controls, directly or indirectly, 10 percent or more of the voting securities of an incorporated foreign business enterprise, or an equivalent interest in an unincorporated foreign business enterprise. A U.S. person can be an incorporated business enterprise. A majority-owned foreign affiliate (MOFA) is a foreign business enterprise in which a U.S. parent company owns or controls more than 50 percent of the voting securities]

Science and Technology

This section presents statistics on scientific, engineering, and technological resources, with emphasis on patterns of research and development (R&D) funding and on scientific, engineering, and technical personnel; education; and employment. Also included are statistics on space program outlays. Principal sources of these data are the National Science Foundation (NSF) and the National Aeronautics and Space Administration (NASA).

NSF gathers data chiefly through recurring surveys. Current NSF publications containing data on funds for research and development and on scientific and engineering personnel include detailed statistical tables; info briefs; and annual, biennial, and special reports <<http://www.nsf.gov/statistics>>. Titles or the areas of coverage of these reports include the following: *Science and Engineering Indicators*; *National Patterns of R&D Resources*; *Women, Minorities, and Persons with Disabilities in Science and Engineering*; *Federal Funds for Research and Development*; *Federal R&D Funding by Budget Function*; *Federal Support to Universities, Colleges, and Selected Nonprofit Institutions*; *Research and Development in Industry*; R&D expenditures and graduate enrollment and support in academic science and engineering; and characteristics of doctoral scientists and engineers and of recent graduates in the United States. Statistical surveys in these areas pose problems of concept and definition and the data should therefore be regarded as broad estimates rather than precise, quantitative statements. See sources for methodological and technical details.

The National Science Board's biennial *Science and Engineering Indicators* <<http://www.nsf.gov/statistics/seind08/>> contains data and analysis of international and domestic science and technology, including measures of inputs and outputs.

Research and development outlays—NSF defines research as “systematic study directed toward fuller scientific knowledge of the subject studied” and development as “the systematic use of scientific

knowledge directed toward the production of useful materials, devices, systems, or methods, including design and development of prototypes and processes.”

National coverage of R&D expenditures is developed primarily from periodic surveys in four principal economic sectors: (1) *Government*, made up primarily of federal executive agencies; (2) *industry*, consisting of manufacturing and nonmanufacturing firms and the federally funded research and development centers (FFRDCs) they administer; (3) *universities and colleges*, composed of universities, colleges, and their affiliated institutions, agricultural experiment stations, and associated schools of agriculture and of medicine, and FFRDCs administered by educational institutions; and (4) *other nonprofit institutions*, consisting of such organizations as private philanthropic foundations, nonprofit research institutes, voluntary health agencies, and FFRDCs administered by nonprofit organizations.

The R&D funds reported consist of current operating costs, including planning and administration costs, except as otherwise noted. They exclude funds for routine testing, mapping and surveying, collection of general-purpose data, dissemination of scientific information, and training of scientific personnel.

Scientists, engineers, and technicians—Scientists and engineers are defined as persons engaged in scientific and engineering work at a level requiring a knowledge of sciences equivalent at least to that acquired through completion of a 4-year college course. Technicians are defined as persons engaged in technical work at a level requiring knowledge acquired through a technical institute, junior college, or other type of training less extensive than 4-year college training. Craftsmen and skilled workers are excluded.

Table 775. **Research and Development (R&D) Expenditures by Source and Objective: 1980 to 2007**

¹ Gross Domestic Product (GDP) by state for private industries. ² National totals for calendar year 2006. The industrial totals include \$3.8 billion of R&D expenditures in 2006 that could not be allocated to specific states. The academic totals incorporate adjustments to convert fiscal year academic data to calendar year and to eliminate double counting of funds passed through one academic institution to another. ³ More than 50 percent of industrial R&D value imputed because of raking of state data. ⁴ More than 50 percent of industrial R&D value imputed. ⁵ For Maryland, academic R&D excludes R&D performed by the Applied Physics Laboratory (APL) at the Johns Hopkins University. APL performed \$709 million of R&D in 2006.

Table 795. **Individuals Employed in Science and Engineering (S&E) Occupations as Share of Workforce by State and Other Areas: 2008**

[In thousands (7,628.9 represents 7,628,900), except as noted. As of May 2008. The Occupational Employment Statistics Survey (OES) collects data in six semiannual panels over a 3-year (November 2005 through May 2008) period on occupational employment and wages of wage and salary workers in nonfarm establishments in the United States, Guam, Puerto Rico, and the Virgin Islands. U.S. totals include data items that are not released separately at the state level due to confidentiality and quality issues. The OES survey uses the Standard Occupational Classification (SOC) system to categorize workers in 1 of 801 detailed occupations. Excludes self employed. For a list of occupations see <<http://www.bls.gov/oes/current/oesstru.htm>>. For more information about methodology, see <<http://www.bls.gov/oes/current/oestec.htm/>>]

Section 17

Agriculture

This section presents statistics on farms and farm operators; land use; farm income, expenditures, and debt; farm output, productivity, and marketings; foreign trade in agricultural products; specific crops; and livestock, poultry, and their products.

The principal sources are the reports issued by the National Agricultural Statistics Service (NASS) and the Economic Research Service (ERS) of the U.S. Department of Agriculture (USDA). The information from the 2007 Census of Agriculture is available in printed form in the Volume 1, Geographic Area Series; in electronic format on CD-ROM; and on the Internet site <http://www.agcensus.usda.gov/Publications/2007/Full_Report/index.asp>. The Department of Agriculture publishes annually *Agricultural Statistics*, a general reference book on agricultural production, supplies, consumption, facilities, costs, and returns. The ERS publishes data on farm assets, debt, and income on the Internet site <<http://www.ers.usda.gov/briefing/farmincome/>>. Sources of current data on agricultural exports and imports include *Outlook for U.S. Agricultural Trade*, published by the ERS; the ERS Internet site <<http://www.ers.usda.gov/briefing/AgTrade/>>; and the foreign trade section of the U.S. Census Bureau Web site <<http://www.census.gov/foreign-trade/statistics/index.html>>.

The field offices of the NASS collect data on crops, livestock and products, agricultural prices, farm employment, and other related subjects mainly through sample surveys. Information is obtained on crops and livestock items as well as scores of items pertaining to agricultural production and marketing. State estimates and supporting information are sent to the Agricultural Statistics Board of NASS, which reviews the estimates and issues reports containing state and national data. Among these reports are annual

summaries such as *Crop Production*, *Crop Values*, *Agricultural Prices*, and *Livestock Production, Disposition and Income*.

Farms and farmland—The definitions of a farm have varied through time. Since 1850, when minimum criteria defining a farm for census purposes first were established, the farm definition has changed nine times. The current definition, first used for the 1974 census, is any place from which \$1,000 or more of agricultural products were produced and sold, or normally would have been sold, during the census year.

Acreage designated as “land in farms” consists primarily of agricultural land used for crops, pasture, or grazing. It also includes woodland and wasteland not actually under cultivation or used for pasture or grazing, provided it was part of the farm operator’s total operation. Land in farms includes acres set aside under annual commodity acreage programs as well as acres in the Conservation Reserve and Wetlands Reserve Programs for places meeting the farm definition. Land in farms is an operating unit concept and includes land owned and operated as well as land rented from others. All grazing land, except land used under government permits on a per-head basis, was included as “land in farms” provided it was part of a farm or ranch.

An evaluation of coverage has been conducted for each census of agriculture since 1945 to provide estimates of the completeness of census farm counts. Beginning with the 1997 Census of Agriculture, census farm counts and totals were statistically adjusted for coverage and reported at the county level. The size of the adjustments varies considerably by state. In general, farms not on the census mail list tended to be small in acreage, production, and sales of farm products. The response rate for the 2007 Census of Agriculture was 85.2 percent as compared with a response rate of 88.0 for the

2002 Census of Agriculture and 86.2 percent for the 1997 Census of Agriculture. For more explanation about census mail list compilation, collection methods, coverage measurement, and adjustments, see Appendix A, 2007 Census of Agriculture, Volume 1 reports.

Farm income—The final agricultural sector output comprises cash receipts from farm marketings of crops and livestock, federal government payments made directly to farmers for farm-related activities, rental value of farm homes, value of farm products consumed in farm homes, and other farm-related income such as machine hire and custom work. Farm marketings represent quantities of agricultural products sold by farmers multiplied by prices received per unit of production at the local market. Information on prices received for farm products is generally obtained by the NASS Agricultural Statistics Board from surveys of firms (such as grain elevators, packers, and processors) purchasing agricultural commodities directly from producers. In some cases, the price information is obtained directly from the producers.

Crops—Estimates of crop acreage and production by the NASS are based on current sample survey data obtained from individual producers and objective yield counts, reports of carlot shipments, market records, personal field observations by field statisticians, and reports from other sources. Prices received by farmers are marketing year averages. These averages are based on U.S. monthly prices

weighted by monthly marketings during specific periods. U.S. monthly prices are state average prices weighted by marketings during the month. Marketing year average prices do not include allowances for outstanding loans, government purchases, deficiency payments or disaster payments.

All state prices are based on individual state marketing years, while U.S. marketing year averages are based on standard marketing years for each crop. For a listing of the crop marketing years and the participating states in the monthly program, see *Crop Values*. Value of production is computed by multiplying state prices by each state's production. The U.S. value of production is the sum of state values for all states. Value of production figures shown in Tables 830–834 and 836 should not be confused with cash receipts from farm marketings which relate to sales during a calendar year, irrespective of the year of production.

Livestock—Annual inventory numbers of livestock and estimates of livestock, dairy, and poultry production prepared by the Department of Agriculture are based on information from farmers and ranchers obtained by probability survey sampling methods.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability pertaining to Department of Agriculture data, see Appendix III.

¹ Excludes horses, mules, and broilers. ² Includes only farm share value for trucks and autos. ³ All non-CCC crops held on farms plus the value above loan rate for crops held under Commodity Credit Corporation. ⁴ Excludes debt for nonfarm purposes. ⁵ Returns to farm assets from current income/farm business assets. Measures how efficiently the farm business uses its assets; the per dollar return on farm assets from current income only. ⁶ Real capital gains on farm business assets/farm business assets. The per dollar return on farm assets from real capital gains. ⁷ Returns to farm assets from current income minus interest/farm business equity. Measures the returns to equity capital employed in farm business from current income less interest. ⁸ Real capital gains on farm business assets/farm business equity. The per dollar return on farm equity from real capital gains.

Table 815. Farm Income—Cash Receipts From Farm Marketings: 2000 to 2007

[In millions of dollars (191,999 represents \$191,999,000,000). Represents gross receipts from commercial market sales as well as net Commodity Credit Corporation loans. The source estimates and publishes individual cash receipt values only for major commodities and major producing states. The U.S. receipts for individual commodities, computed as the sum of the reported states, may understate the value of sales for some commodities. The degree of underestimation in some of the minor commodities can be substantial]

NA Not available. ¹ Marketing year average price. U.S. prices are computed by weighting U.S. monthly prices by estimated monthly marketings and do not include an allowance for outstanding loans and government purchases and payments. ² Comprises production, imports, and beginning stocks. ³ Includes feed, residual, and other domestic uses not shown separately. ⁴ Prices are for hay sold baled. ⁵ Season average prices received by farmers. U.S. prices are computed by weighting state prices by estimated sales. ⁶ State production figures, which conform with annual ginning enumeration with allowance for cross-state ginnings, rounded to thousands and added for U.S. totals. ⁷ Bales of 480 pounds, net weight. ⁸ Stock estimates based on Census Bureau data which results in an unaccounted difference between supply and use estimates and changes in ending stocks. ⁹ Cwt = hundredweight (100 pounds).

Forestry, Fishing, and Mining

This section presents data on the area, ownership, production, trade, reserves, and disposition of natural resources. Natural resources is defined here as including forestry, fisheries, and mining and mineral products.

Forestry—Presents data on the area, ownership, and timber resource of commercial timberland; forestry statistics covering the National Forests and Forest Service cooperative programs; product data for lumber, pulpwood, woodpulp, paper and paperboard, and similar data.

The principal sources of data relating to forests and forest products are *Forest Resources of the United States, 2007*; *Timber Demand and Technology Assessment*; *U.S. Timber Production, Trade, Consumption, and Price Statistics, 1965–2005*; *Land Areas of the National Forest System*, issued annually by the Forest Service of the U.S. Department of Agriculture; *Agricultural Statistics* issued by the Department of Agriculture; and reports of the annual survey of manufactures, and the annual *Current Industrial Reports*, issued by the U.S. Census Bureau on the Internet and in print in the annual *Manufacturing Profiles*. Additional information is published in the monthly *Survey of Current Business* of the Bureau of Economic Analysis, and the annual *Wood Pulp and Fiber Statistics* and *The Annual Statistics of Paper, Paperboard, and Wood Pulp* of the American Forest and Paper Association, Washington, DC.

The completeness and reliability of statistics on forests and forest products vary considerably. The data for forest land area and stand volumes are much more reliable for areas that have been recently surveyed than for those for which only estimates are available. In general, more data are available for lumber and other manufactured products such as particle board and softwood panels, etc., than for the primary forest products such as poles and piling and fuelwood.

Fisheries—The principal source of data relating to fisheries is *Fisheries of the United States*, issued annually by the National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA). The NMFS collects and disseminates data on commercial landings of fish and shellfish. Annual reports include quantity and value of commercial landings of fish and shellfish disposition of landings and number and kinds of fishing vessels and fishing gear. Reports for the fish-processing industry include annual output for the wholesaling and fish processing establishments, annual and seasonal employment. The principal source for these data is the annual *Fisheries of the United States*.

Mining and mineral products—

Presents data relating to mineral industries and their products, general summary measures of production and employment, and more detailed data on production, prices, imports and exports, consumption, and distribution for specific industries and products. Data on mining and mineral products may also be found in Sections 19, 21, and 28 of this *Abstract*; data on mining employment may be found in Section 12.

Mining comprises the extraction of minerals occurring naturally (coal, ores, crude petroleum, natural gas) and quarrying, well operation, milling, refining and processing, and other preparation customarily done at the mine or well site or as a part of extraction activity. (Mineral preparation plants are usually operated together with mines or quarries.) Exploration for minerals is included as is the development of mineral properties.

The principal governmental sources of these data are the *Minerals Yearbook* and *Mineral Commodity Summaries*, published by the U.S. Geological Survey, U.S. Department of the Interior, and various monthly and annual publications of the Energy

Information Administration, U.S. Department of Energy. See text, Section 19, for a list of Department of Energy publications. In addition, the Census Bureau conducts a census of mineral industries every 5 years.

Nongovernment sources include the *Annual Statistical Report* of the American Iron and Steel Institute, Washington, DC; *Metals Week* and the monthly *Engineering and Mining Journal*, issued by the McGraw-Hill Publishing Co., New York, NY; *The Iron Age*, issued weekly by the Chilton Co., Philadelphia, PA; and the *Joint Association Survey of the U.S. Oil and Gas Industry*, conducted jointly by the American Petroleum Institute, Independent Petroleum Association of America, and Mid-Continent Oil and Gas Association.

Mineral statistics, with principal emphasis on commodity detail, have been collected by the U.S. Geological Survey and the

former Bureau of Mines since 1880. Current data in U.S. Geological Survey publications include quantity and value of non-fuel minerals produced, sold, or used by producers, or shipped; quantity of minerals stocked; crude materials treated and prepared minerals recovered; and consumption of mineral raw materials.

The Economic Census, conducted by the Census Bureau at various intervals since 1840, collects data on mineral industries. Beginning with the 1967 census, legislation provides for a census to be conducted every 5 years for years ending in “2” and “7.” The most recent results, published for 2002, are based on the North American Industry Classification System (NAICS). The censuses provide, for the various types of mineral establishments, information on operating costs, capital expenditures, labor, equipment, and energy requirements in relation to their value of shipments and other receipts.

Table 848. **Gross Domestic Product of Natural Resource-Related Industries in Current and Real (2000) Dollars by Industry: 2000 to 2008**

[In billions of dollars (9,817.0 represents \$9,817,000,000,000). Data are based on the 1997 North American Industry Classification System (NAICS); see text, Section 15. Data include nonfactor charges (capital consumption allowances, indirect business taxes, etc.) as well as factor charges against gross product; corporate profits and capital consumption allowances have been shifted from a company to an establishment basis]

Table 852. **Forest Land and Timberland by Type of Owner and Region: 2007**

[In thousands of acres (751,228 represents 751,228,000). As of January 1. Forest land is land at least 10 percent stocked by forest trees of any size, including land that formerly had such tree cover and that will be naturally or artificially regenerated. The minimum area for classification of forest land is 1 acre or strips of timber with a crown width of at least 120 feet wide. Timberland is forest land that is producing or is capable of producing crops of industrial wood and that is not withdrawn from timber utilization by statute or administrative regulation]

¹ As of January 1. ² Live trees of commercial species meeting specified standards of quality or vigor. Cull trees are excluded. Includes only trees 5.0-inches in diameter or larger at 4 1/2 feet above ground. ³ Live trees of commercial species containing at least one 12-foot sawlog or two noncontiguous 8-foot logs, and meeting regional specifications for freedom from defect. Softwood trees must be at least 9.0 inches in diameter and hardwood trees must be at least 11.0-inches in diameter at 4 1/2 feet above ground. ⁴ The net increase in the volume of trees during a specified year. Components include the increment in net volume of trees at the beginning of the specific year surviving to its end, plus the net volume of trees reaching the minimum size class during the year, minus the volume of trees that died during the year, and minus the net volume of trees that became cull trees during the year. ⁵ The net volume of trees removed from the inventory during a specified year by harvesting, cultural operations such as timber stand improvement, or land clearing. ⁶ Includes Hawaii.

NA Not available. Z Less than 500 million cubic feet. ¹ Estimated, end of year. Source: U.S. Energy Information Administration, *U.S. Crude Oil, Natural Gas, and Natural Gas Liquids Reserves*, annual. ² Marketed production includes gross withdrawals from reservoirs less quantities used for reservoir repressuring and quantities vented or flared. Excludes nonhydrocarbon gases subsequently removed. ³ Volumetric reduction in natural gas resulting from the removal of natural gas plant liquids, which are transferred to petroleum supply. ⁴ Quantities lost and imbalances in data due to differences among data sources. Since 1980, excludes intransit shipments that cross U.S.-Canada border (i.e., natural gas delivered to its destination via the other country). ⁵ Underground storage. Through 2004, includes liquefied natural gas (LNG) storage in above-ground tanks. ⁶ Natural gas consumed in the operation of pipelines and delivery to consumers. ⁷ Includes deliveries to municipalities and public authorities for institutional heating and other purposes.

Section 19

Energy and Utilities

This section presents statistics on fuel resources, energy production and consumption, electric energy, hydroelectric power, nuclear power, solar and wind energy, wood energy (biomass), and the electric and gas utility industries. The principal sources are the U.S. Department of Energy's Energy Information Administration (EIA), the Edison Electric Institute, Washington, DC, and the American Gas Association, Arlington, VA. The Department of Energy was created in October 1977 and assumed and centralized the responsibilities of all or part of several agencies including the Federal Power Commission (FPC), the U.S. Bureau of Mines, the Federal Energy Administration, and the U.S. Energy Research and Development Administration. For additional data on transportation, see Section 23; on fuels, see Section 18; and on energy-related housing characteristics, see Section 20.

The EIA, in its *Annual Energy Review*, provides statistics and trend data on energy supply, demand, and prices. Information is included on petroleum and natural gas, coal, electricity, hydroelectric power, nuclear power, solar, wind, wood, and geothermal energy. Among its annual reports are *Annual Energy Review*; *Electric Power Annual*; *Natural Gas Annual*; *Petroleum Supply Annual*; *State Energy Consumption, Price, and Expenditure Data*; *U.S. Crude Oil, Natural Gas, and Natural Gas Liquids Reserves*; *Electric Sales and Revenue*; *Annual Energy Outlook*; and *International Energy Annual*. These various reports contain state, national, and international data on production of electricity, net summer capability of generating plants, fuels used in energy production, energy sales and consumption, and hydroelectric power. The EIA also issues the *Monthly Energy Review*, which presents current supply, disposition, and price data and monthly publications on

petroleum, coal, natural gas, and electric power. Data on residential energy consumption, expenditures, and conservation activities are available from EIA's Residential Energy Consumption Survey and are published every 4 years.

The Edison Electric Institute's monthly bulletin and annual *Statistical Year Book of the Electric Utility Industry for the Year* contain data on the distribution of electric energy by public utilities; information on the electric power supply, expansion of electric generating facilities, and the manufacture of heavy electric power equipment is presented in the annual *Year-End Summary of the Electric Power Situation in the United States*. The American Gas Association, in its monthly and quarterly bulletins and its yearbook, *Gas Facts*, presents data on gas utilities and financial and operating statistics.

Btu conversion factors—Various energy sources are converted from original units to the thermal equivalent using British thermal units (Btu). A Btu is the amount of energy required to raise the temperature of 1 pound of water 1 degree Fahrenheit (F) at or near 39.2 degrees F. Factors are calculated annually from the latest final annual data available; some are revised as a result. The following list provides conversion factors used in 2008 for production and consumption, in that order, for various fuels: Petroleum, 5.800 and 5.339 mil. Btu per barrel; total coal, 20.219 and 19.988 mil. Btu per short ton; and natural gas (dry), 1,028 Btu per cubic foot for both. The factors for the production of nuclear power and geothermal power were 10,488 and 21,017 Btu per kilowatt-hour, respectively. The fossil fuel steam-electric power plant generation factor of 9,884 Btu per kilowatt-hour was used for hydroelectric power generation and for wood and waste, wind, photovoltaic, and solar thermal energy consumed at electric utilities.

In the past few years, EIA has restructured the industry categories it once used to gather and report electricity statistics. The electric power industry, previously divided into electric utilities and non-utilities, now consists of the Electric Power Sector, the Commercial Sector, and the Industrial Sector.

The Electric Power Sector is composed of electricity-only and combined-heat-and-power plants (CHPs) whose primary business is to sell electricity, or electricity and heat, to the public.

Electricity-only plants are composed of traditional electric utilities, and nontraditional participants, including energy service providers, power marketers, independent power producers (IPPs), and the portion of CHPs that produce only electricity.

A utility is defined as a corporation, person, agency, authority, or other legal entity or instrumentality aligned with distribution facilities for delivery of electric energy for use primarily by the public. Electric utilities include investor-owned electric utilities, municipal and state utilities, federal electric utilities, and rural electric cooperatives. In total, there are more than 3,100 electric utilities in the United States.

An independent power producer is an entity defined as a corporation, person, agency, authority, or other legal entity or instrumentality that owns or operates facilities whose primary business is to produce electricity for use by the public. They are not generally aligned with distribution facilities and are not considered electric utilities.

Combined-heat-and-power producers are plants designed to produce both heat and electricity from a single heat source. These types of electricity producers can be independent power producers or industrial or commercial establishments. As some independent power producers are CHPs, their information is included in the data for the combined-heat-and-power sector. There are approximately 2,800 unregulated independent power producers and CHPs in the United States.

The Commercial Sector consists of commercial CHPs and commercial electricity-only plants. Industrial CHPs and industrial electricity-only plants make up the Industrial Sector. For more information, please refer to the *Electric Power Annual 2007* Web site located at <http://www.eia.doe.gov/cneaf/electricity/epa/epa_sum.html>.

Table 888. **Utilities—Employees, Annual Payroll, and Establishments by Industry: 2006**

[47,692 represents \$47,692,000,000. Excludes government employees, railroad employees, self-employed persons, etc. An establishment is a single physical location where business is conducted or where services or industrial operations are performed. See Appendix III]

Year and industry	2002 NAICS code ¹	Num-ber of employ-ees ²	Annual payroll (mil. dol.)	Aver-age payroll per em-ployee (dol.)	Establishments by employment size-class				
					Total	Under 20 em- ployees	20 to 99 em- ployees	100 to 499 em- ployees	500 and over employ-ees

- Represents zero. Z Less than 50 billion Btu. ¹ Includes other sources, not shown separately. ² U.S. total energy and U.S. industrial sector include 60.8 trillion Btu of net imports of coal coke that is not allocated to the states. ³ Based on estimated resident population as of July 1. ⁴ End-use sector data include electricity sales and associated electrical system energy losses. ⁵ Includes fuel ethanol blended into motor gasoline. ⁶ Includes supplemental gaseous fuels. ⁷ Conventional hydroelectric power. Does not include pumped-storage hydroelectricity.

Table 894. **Residential Energy Consumption, Expenditures, and Average Price: 1980 to 2005**

[9.32 represents 9,320,000,000,000,000 Btu. For period April to March for 1980; January to December for 1990 to 2005. Excludes Alaska and Hawaii in 1980. Covers occupied units only. Excludes household usage of gasoline for transportation and the use of wood or coal. Based on Residential Energy Consumption Survey; see source. Btu = British thermal unit; see text, this section]

Type of fuel	Unit	1980	1990	1993	1997	2001	2005
CONSUMPTION							
Total ¹	Quad. Btu	9.32	9.22	10.01	10.25	9.86	10.55
Average per household . . .	Mil. Btu	114	98	104	101	92	95
Natural gas	Quad. Btu.	4.97	4.86	5.27	5.28	4.84	4.79
Electricity, site	Quad. Btu.	2.48	3.03	3.28	3.54	3.89	4.35
Fuel oil, kerosene ²	Quad. Btu.	1.52	1.04	1.07	1.07	0.76	0.88
Liquid petroleum gas	Quad. Btu.	0.35	0.28	0.38	0.36	0.38	0.52
EXPENDITURES							
Total	Bil. dol.	75.6	110.2	123.9	135.8	159.7	201.1
Average per household . . .	Dollars	926	1,172	1,282	1,338	1,493	1,810
Natural gas	Bil. dol.	19.8	27.3	32.0	35.8	47.0	52.3
Electricity	Bil. dol.	40.8	71.5	81.1	88.3	100.3	124.7
Fuel oil, kerosene	Bil. dol.	12.2	8.3	7.0	7.6	6.8	13.0
Liquid petroleum gas	Bil. dol.	2.8	3.1	3.8	4.0	5.6	11.0
AVERAGE PRICE							
Total	Dol./mil. Btu . .	8.12	11.95	12.38	13.25	16.19	19.07
Natural gas	Dol./mil. Btu . .	3.98	5.61	6.07	6.78	9.70	10.93
Electricity	Dol./mil. Btu . .	16.46	23.60	24.69	24.97	25.80	28.67
Fuel oil, kerosene	Dol./mil. Btu . .	8.03	7.92	6.53	7.13	9.05	28.79
Liquid petroleum gas	Dol./mil. Btu . .	8.00	11.18	10.04	11.23	14.87	20.97

¹ Total excludes primary electricity and wood. ² Kerosene consumption and expenditure estimates could only be calculated for space heating since too few cases in the sample had viable data for water heating and appliances. Therefore, total estimates for kerosene equal space heating estimates for kerosene.

Z Less than 5 trillion Btu. ¹ Preliminary. ² Power produced from natural stream flow as regulated by available storage. ³ As used at electric power plants, hot water or steam extracted from geothermal reservoirs in the Earth's crust that is supplied to steam turbines at electric power plants that drive generators to produce electricity. ⁴ Wood and wood-derived fuels, municipal solid waste (from biogenic sources, landfill gas, sludge waste, agricultural byproducts, and other biomass), fuel ethanol, and biodiesel. ⁵ The radiant energy of the sun, which can be converted into other forms of energy, such as heat or electricity. Solar thermal and photovoltaic electricity net generation and solar thermal direct use energy. ⁶ Energy present in wind motion that can be converted to mechanical energy for driving pumps, mills, and electric power generators. Wind pushes against sails, vanes, or blades radiating from a central rotating shaft. ⁷ Consists of living quarters for private households, but excludes institutional living quarters. ⁸ Consists of service-providing facilities and equipment of businesses, governments, and other private and public organizations. Includes institutional living quarters and sewage treatment facilities. Includes commercial combined-heat-and-power and commercial electricity-only plants. ⁹ Consists of all facilities and equipment used for producing, processing, or assembling goods. Includes industrial combined-heat-and-power and industrial electricity-only plants. ¹⁰ Ethanol primarily derived from corn. ¹¹ Any liquid biofuel suitable as a diesel fuel substitute, additive, or extender. ¹² Consists of electricity-only and combined-heat-and-power plants whose primary business is to sell electricity and/or heat to the public. Includes sources not shown separately.

– Represents zero. NA Not available. Z Represents less than 500,000 barrels. ¹ OPEC (Organization of Petroleum Exporting Countries) includes the nations shown, as well as Iran, Libya, Qatar, United Arab Emirates, and Indonesia. ² Angola joined OPEC at the beginning of 2007. Prior to 2007, it is included in the non-OPEC total. ³ Ecuador withdrew from OPEC on Dec. 31, 1992; therefore, it is included under OPEC prior to 1995. From 1995 through 2007, it is included in the Non-OPEC total. In Nov. 2007, Ecuador rejoined OPEC; imports for 2008 are included in the OPEC total. ⁴ Gabon withdrew from OPEC on Dec. 31, 1994; therefore, it is included under OPEC prior to 1995. Beginning 1995, it is included in the Non-OPEC total. ⁵ Imports from the Neutral Zone between Kuwait and Saudi Arabia are included in Saudi Arabia. ⁶ Non-OPEC total includes nations not shown.

¹ Total of nuclear generating units holding full-power licenses, or equivalent permission to operate, at the end of the year. Although Browns Ferry 1 was shut down in 1985, the unit has remained fully licensed and thus has continued to be counted as operable during the shutdown. ² As of year-end. ³ Net summer capacity is the peak steady hourly output that generating equipment is expected to supply to system load, exclusive of auxiliary and other power plant, as demonstrated by test at the time of summer peak demand. ⁴ Weighted average of monthly capacity factors. Monthly factors are derived by dividing actual monthly generation by the maximum possible generation for the month (number of hours in the month multiplied by the net summer capacity at the end of the month).

Table 912. Electricity—End Use and Average Retail Prices: 1980 to 2008

[Beginning 2003, the category "other" has been replaced by "transportation," and the categories "commercial" and "industrial" have been redefined. Data represent revenue from electricity retail sales divided by the amount of retail electricity sold (in kilowatt-hours). Prices include state and local taxes, energy or demand charges, customer service charges, environmental surcharges, franchise fees, fuel adjustments, and other miscellaneous charges applied to end-use customers during normal billing operations. Prices do not include deferred charges, credits, or other adjustments, such as fuel or revenue from purchased power, from previous reporting periods. Data are for a census of electric utilities. Beginning in 2000, data also include energy service providers selling to retail customers]

Item	1990	1995	2000	2003	2004	2005	2006	2007	2008 ¹

Table 917. Total Electric Power Industry—Generation, Sales, Revenue, and Customers: 1990 to 2008

[2,808 represents 2,808,000,000,000 kWh. Sales and revenue are to and from ultimate customers. Commercial and Industrial are not wholly comparable on a year-to-year basis due to changes from one classification to another. For the 2003 period forward, the Energy Information Administration replaced the "Other" sector with the Transportation sector. The Transportation sector consists entirely of electrified rail and urban transit systems. Data previously reported in "Other" have been relocated to the Commercial sector, except for Agriculture (i.e., irrigation load), which have been relocated to the Industrial sector]

Percent of population	100	53	19	4	4	20	81	19

— Represents zero. ¹ Includes a small number of systems for which the water source (ground vs. surface) is unknown. ² A public water system that supplies water to the same population year-round. ³ A public water system that regularly supplies water to at least 25 of the same people at least 6 months per year, but not year-round. Some examples are schools, factories, and office buildings which have their own water systems. ⁴ A public water system that provides water in a place such as a gas station or campground where people do not remain for long periods of time and is open at least 60 day per year.

Construction and Housing

This section presents data on the construction industry and on various indicators of its activity and costs; on housing units and their characteristics and occupants; and on the characteristics and vacancy rates for commercial buildings. This edition contains data from the 2005 American Housing Survey.

The principal source of these data is the U.S. Census Bureau, which issues a variety of current publications, as well as data from the decennial census. Current construction statistics compiled by the Census Bureau appear in its *New Residential Construction* and *New Residential Sales* press releases and Web site <<http://www.census.gov/const/www/>>. Statistics on expenditures by owners of residential properties are issued quarterly and annually in *Expenditures for Residential Improvements and Repairs*. *Value of New Construction Put in Place* presents data on all types of construction. Reports of the censuses of construction industries (see below) are also issued on various topics.

Other Census Bureau publications include the *Current Housing Reports* series, which comprise the quarterly *Housing Vacancies*, the quarterly *Market Absorption of Apartments*, the biennial *American Housing Survey* (formerly *Annual Housing Survey*), and reports of the censuses of housing and of construction industries.

Other sources include the monthly *Dodge Construction Potentials* of McGraw-Hill Construction, New York, NY, which present national and state data on construction contracts; the National Association of Home Builders with state-level data on housing starts; the NATIONAL ASSOCIATION OF REALTORS®, which presents data on existing home sales; the Bureau of Economic Analysis, which presents data on residential capital and gross housing product; and the U.S. Energy

Information Administration, which provides data on commercial buildings through its periodic sample surveys.

Censuses and surveys—Censuses of the construction industry were first conducted by the Census Bureau for 1929, 1935, and 1939; beginning in 1967, a census has been taken every 5 years (through 2002, for years ending in “2” and “7”). The latest reports are part of the 2002 Economic Census. See text, Section 15, Business Enterprise.

The construction sector of the economic census, covers all employer establishments primarily engaged in (1) building construction by general contractors or operative builders; (2) heavy (nonbuilding) construction by general contractors; and (3) construction by special trade contractors. This sector includes construction management and land subdividers and developers. The 2002 census was conducted in accordance with the 2002 North American Industrial Classification System (NAICS). See text, Section 15, Business Enterprise.

From 1850 through 1930, the Census Bureau collected some housing data as part of its censuses of population and agriculture. Beginning in 1940, separate censuses of housing have been taken at 10-year intervals. For the 1970 and 1980 censuses, data on year-round housing units were collected and issued on occupancy and structural characteristics, plumbing facilities, value, and rent; for 1990 such characteristics were presented for all housing units.

The American Housing Survey (*Current Housing Reports* Series H-150 and H-170), which began in 1973, provided an annual and ongoing series of data on selected housing and demographic characteristics until 1983. In 1984, the name of the survey was changed from the Annual Housing Survey. Currently, national data are collected every other year, and data for

selected metropolitan areas are collected on a rotating basis. All samples represent a cross section of the housing stock in their respective areas. Estimates are subject to both sampling and nonsampling errors; caution should therefore be used in making comparisons between years.

Data on residential mortgages were collected continuously from 1890 to 1970, except 1930, as part of the decennial census by the Census Bureau. Since 1973, mortgage status data, limited to single family homes on less than 10 acres with no business on the property, have been presented in the American Housing Survey. Data on mortgage activity are covered in Section 25, Banking and Finance.

Housing units—In general, a housing unit is a house, an apartment, a group of rooms or a single room occupied or intended for occupancy as separate living quarters; that is, the occupants live separately from any other individual in the building, and there is direct access from the outside or through a common hall. Transient accommodations, barracks for workers, and institutional-type quarters are not counted as housing units.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Table 926. **Construction—Establishments, Employees, and Payroll by Kind of Business (NAICS Basis): 2005 and 2006**

[6,781 represents 6,781,000. Covers establishments with payroll. Excludes most government employees, railroad employees, and self-employed persons. Kind-of-business classification based on North American Industry Classification System (NAICS) 2002. For statement on methodology, see Appendix III]

¹ Based on 2000 census controls. ² Includes other races not shown separately. ³ The 2003 American Housing Survey (AHS) allowed respondents to choose more than one race. Beginning in 2003, data represent householders who selected this race group only and exclude householders reporting more than one race. The AHS in prior years only allowed respondents to report one race group. See also comments on race in the text for Section 1 and the below cited source. ⁴ Persons of Hispanic origin may be any race.

Section 21

Manufactures

This section presents summary data for manufacturing as a whole and more detailed information for major industry groups and selected products. The types of measures shown at the different levels include data for establishments, employment and payroll, value and quantity of production and shipments, value added by manufacture, inventories, and various indicators of financial status.

The principal sources of these data are U.S. Census Bureau reports of the censuses of manufactures conducted every 5 years, the *Annual Survey of Manufactures*, and *Current Industrial Reports*. Reports on current activities of industries or current movements of individual commodities are compiled by such government agencies as the Bureau of Economic Analysis; Bureau of Labor Statistics; the Department of Commerce, International Trade Administration; and by private research or trade associations.

The Quarterly Financial Report publishes up-to-date aggregate statistics on the financial results and position of U.S. corporations. Based upon a sample survey, the QFR presents estimated statements of income and retained earnings, balance sheets, and related financial and operating ratios for manufacturing corporations with assets of \$250,000 or over, and mining, wholesale trade and retail trade corporations with assets of \$50 million and over or above industry specific receipt cut-off values. These statistical data are classified by industry and by asset size.

Several private trade associations provide industry coverage for certain sections of the economy. They include the Aluminum Association (Table 995), American Iron and Steel Institute (Table 993), Consumer Electronics Association (Table 999), and the Aerospace Industries Association (Tables 1004 and 1006).

Censuses and annual surveys—The first census of manufactures covered the year 1809. Between 1809 and 1963, a

census was conducted at periodic intervals. Since 1967, it has been taken every 5 years (for years ending in “2” and “7”). Results from the 2002 census are presented in this section utilizing the North American Industry Classification System (NAICS). For additional information see text, Section 15, Business Enterprise, and the Census Bureau Web site at <<http://www.census.gov/econ/census07/>>. Census data, either directly reported or estimated from administrative records, are obtained for every manufacturing plant with one or more paid employees.

The *Annual Survey of Manufactures* (ASM), conducted for the first time in 1949, collects data for the years between censuses for the more general measure of manufacturing activity covered in detail by the censuses. The annual survey data are estimates derived from a scientifically selected sample of establishments. The 2004 annual survey is based on a sample of about 50,000 from a universe of 346,000 establishments. These establishments represent all manufacturing establishments of multiunit companies and all single-establishment manufacturing companies mailed schedules in the 2002 Census of Manufactures. For the current panel of the ASM sample, all establishments of companies with 2002 shipments in manufacturing in excess of \$500 million were included in the survey with certainty. For the remaining portion of the mail survey, the establishment was defined as the sampling unit. For this portion, all establishments with 500 employees or more and establishments with a very large value of shipments also were included. Therefore, of the 50,000 establishments included in the ASM panel, approximately 24,000 are selected with certainty. Smaller establishments in the remaining portion of the mail survey were selected by sample.

Establishments and classification—Each of the establishments covered in the 2002 Economic Census—Manufacturing

was classified in 1 of 480 industries (473 manufacturing industries and 7 former manufacturing industries) in accordance with the industry definitions in the 2002 NAICS manual. In the NAICS system, an industry is generally defined as a group of establishments that have similar production processes. To the extent practical, the system uses supply-based or production-oriented concepts in defining industries. The resulting group of establishments must be significant in terms of number, value added by manufacture, value of shipments, and number of employees.

Establishments frequently make products classified both in their industry (primary products) and other industries (secondary products). Industry statistics (employment, payroll, value added by manufacture, value of shipments, etc.) reflect the activities of the establishments, which may make both primary and secondary products. Product statistics, however, represent the output of all establishments without regard for the classification of the producing establishment. For this reason, when relating the industry statistics, especially the value of shipments, to the product statistics, the composition of the industry's output should be considered.

Establishment—Establishment signifies a single physical plant site or factory. It is not necessarily identical to the business unit or company, which may consist of one or more establishments. A company operating establishments at more than one location is required to submit a separate report for each location and include establishments with payroll at any time during the year. An establishment engaged in distinctly different lines of activity and maintaining separate payroll and inventory records is also required to submit separate reports.

Durable goods—Items with a normal life expectancy of 3 years or more. Automobiles, furniture, household appliances, and mobile homes are common examples.

Nondurable goods—Items which generally last for only a short time (3 years or less). Food, beverages, clothing, shoes, and gasoline are common examples.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Table 972. **Gross Domestic Product in Current and Real (2000) Dollars by Industry: 2000 to 2008**

[In billions of dollars (9,817.0 represents \$9,817,000,000,000). Data include nonfactor charges (capital consumption allowances, indirect business taxes, etc.) as well as factor charges against gross product; corporate profits and capital consumption allowances have been shifted from a company to an establishment basis]

¹ North American Industry Classification System, 2002; see text, Section 15. ² Includes employment and payroll at administrative offices and auxiliary units. All employees represents the average of production workers plus all other employees for the payroll period ended nearest the 12th of March. Production workers represent the average of the employment for the payroll periods ended nearest the 12th of March, May, August, and November. ³ Adjusted value added; takes into account (a) value added by merchandising operations (that is, difference between the sales value and cost of merchandise sold without further manufacture, processing, or assembly), plus (b) net change in finished goods and work-in-process inventories between beginning and end of year. ⁴ Includes extensive and unmeasurable duplication from shipments between establishments in the same industry classification. ⁵ Includes industries not shown separately.

Table 987. **Manufacturing Corporations—Assets and Profits by Asset Size: 1990 to 2008**

[In millions of dollars (2,629,458 represents \$2,629,458,000,000). Corporations and assets as of end of 4th quarter; profits for entire year. Through 2000, based on Standard Industrial Classification code; beginning 2001, based on the North American Industry Classification System; see text, Section 15. For corporations above a certain asset value based on complete canvass. The asset value for complete canvass was raised in 1995 to \$250 million. Asset sizes less than these values are sampled, except as noted. For details regarding Survey description, data analysis and methodology, see <<http://www.census.gov/econ/qfr/collection.html>>. Minus sign (–) indicates loss]

Wholesale and Retail Trade

This section presents statistics relating to the distributive trades, specifically wholesale trade and retail trade. Data shown for the trades are classified by kind of business and cover sales, establishments, employees, payrolls, and other items. The principal sources of these data are from the Census Bureau and include the *2007 Economic Census*, annual and monthly surveys, and the *County Business Patterns* program. These data are supplemented by several tables from trade associations, such as the National Automobile Dealers Association (Table 1023). Several notable research groups are also represented, such as Claritas, Inc. (Table 1025).

Data on wholesale and retail trade also appear in several other sections. For instance, labor force employment and earnings data appear in Section 12, Labor Force, Employment, and Earnings; gross domestic product of the industry (Table 652) appears in Section 13, Income, Expenditures, Poverty, and Wealth; financial data (several tables) from the quarterly *Statistics of Income Bulletin*, published by the Internal Revenue Service, appear in Section 15, Business Enterprise.

Censuses—Censuses of wholesale trade and retail trade have been taken at various intervals since 1929. Beginning with the 1967 census, legislation provides for a census of each area to be conducted every 5 years (for years ending in “2” and “7”). For more information on the most recent census, see the *Guide to the 2007 Economic Census* found at <<http://www.census.gov/econ/census02/guide/>>. The industries covered in the censuses and surveys of business are defined in the *North American Industry Classification System*, (NAICS). *Retail trade* refers to places of business primarily engaged in retailing merchandise to the general public; and *wholesale trade*, to establishments primarily engaged in selling goods to other businesses and normally operating from a warehouse or office that have little or no display of merchandise. Most

Census Bureau tables in this section utilize the 2002 NAICS codes, which replaced the Standard Industrial Classification (SIC) system. NAICS made substantial structural improvements and identifies over 350 new industries. At the same time, it causes breaks in time series far more profound than any prior revision of the previously used SIC system. For information on this system and how it affects the comparability of wholesale and retail statistics historically, see text, Section 15, Business Enterprise, and especially the Census Bureau Web site at <<http://www.census.gov/epcd/www/naics.html>>. In general, the 2007 Economic Census has three series of publications for these two sectors: 1) subject series with reports such as product lines and establishment and firm sizes, 2) geographic reports with individual reports for each state, and 3) industry series with individual reports for industry groups. For information on these series, see the Census Bureau Web site at <<http://www.census.gov/econ/census07/>>.

Current surveys—Current sample surveys conducted by the Census Bureau cover various aspects of wholesale and retail trade. Its *Monthly Retail Trade and Food Services* release <<http://www.census.gov/mrts/www/mrts.html>> contains monthly estimates of sales, inventories, and inventory/sales ratios for the United States, by kind of business. Annual figures on retail sales, year-end inventories, purchases, accounts receivable, and gross margins by kind of business are located on the Census Bureau Web site at <<http://www.census.gov/svsd/www/artstbl.html>>. Additionally, annual data for accommodation and food services are located at the same site.

Statistics from the Bureau's monthly wholesale trade survey include national estimates of sales, inventories, and inventory/sales ratios for merchant wholesalers excluding manufacturers' sales branches and offices. Data are presented by major summary groups

“durable and nondurable,” and 4-digit NAICS industry groups. Merchant wholesalers excluding manufacturers’ sales branches and offices are those wholesalers who take title to the goods they sell (e.g., jobbers, exporters, importers, industrial distributors). These data, based on reports submitted by a sample of firms, appear in the *Monthly Wholesale Trade Report* <<http://www.census.gov/Wholesale/index.htm>>. This report, along with monthly sales, inventories, and inventories/sales ratios, also provides data on annual sales, inventories, and year-end inventories/sales ratios. The Annual Wholesale Trade Survey provides data on merchant wholesalers excluding manufacturer sales branches and offices as well as summary data for all merchant wholesalers. This report also provides separate data for manufacturer sales branches and offices, and electronic markets, agents, brokers, and commission merchants. This report provides data on annual sales, year-end inventories, inventories/sales ratios, operating expenses, purchases, and gross margins. Data are presented by major summary groups “durable and nondurable” and 4-digit NAICS industry groups for sales, end-of-year inventories, and operating expenses. The reports are available as documents on the Census Bureau Web site

at <<http://www.census.gov/econ/www/retmenu.html>>.

E-commerce—Electronic commerce (or e-commerce) is sales of goods and services over the Internet and extranet, electronic data interchange (EDI), or other online systems. Payment may or may not be made online. E-commerce data were collected in four separate Census Bureau surveys. These surveys used different measures of economic activity such as shipments for manufacturing, sales for wholesale and retail trade, and revenues for service industries. Consequently, measures of total economic and e-commerce activity vary by economic sector, are conceptually and definitionally different, and therefore, are not additive. This edition has several tables on e-commerce sales, such as Tables 1011, 1021, and 1022 in this section, 977 in Section 21, Manufactures, and 1242 in Section 27, Accommodation, Food Services, and Other Services.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Table 1008. **Wholesale and Retail Trade—Establishments, Sales, Payroll, and Employees: 2002 and 2007**

[4,635 represents \$4,635,000,000,000. Covers establishments with payroll. For statement on methodology, see Appendix III]

Section 23

Transportation

This section presents data on civil air transportation, both passenger and cargo, and on water transportation, including inland waterways, oceanborne commerce, the merchant marine, cargo, and vessel tonnages.

This section also presents statistics on revenues, passenger and freight traffic volume, and employment in various revenue-producing modes of the transportation industry, including motor vehicles, trains, and pipelines. Data are also presented on highway mileage and finances, motor vehicle travel, accidents, and registrations; and characteristics of public transit, railroads, and pipelines.

Principal source of transportation data is the annual *National Transportation Statistics* publication of the U.S. Bureau of Transportation Statistics. Principal sources of air and water transportation data are the *Annual Report* issued by the Air Transport Association of America, Washington, DC and the annual *Waterborne Commerce of the United States* issued by the Corps of Engineers of the Department of Army. In addition, the U.S. Census Bureau in its commodity flow survey (part of the census of transportation, taken every 5 years through 2007, for years ending in “2” and “7”) provides data on the type, weight, and value of commodities shipped by manufacturing establishments in the United States, by means of transportation, origin, and destination. The advance reports for 2007 are part of the 2007 Economic Census. This census was conducted in accordance with the 2002 North American Industry Classification System (NAICS). See text, Section 15, Business Enterprise, for a discussion of the Economic Census and NAICS.

The Bureau of Transportation Statistics (BTS) was established within the U.S. Department of Transportation (USDOT) in 1992 to collect, report, and analyze transportation data. Today, BTS is a component of the USDOT Research and Innovative

Technology Administration (RITA). BTS products include reports to Congress, the Secretary of Transportation, and stakeholders in the nation’s transportation community. These stakeholders include: federal agencies, state and local governments, metropolitan planning organizations, universities, the private sector and general public. Congress requires the BTS to report (congressional mandate, laid out in 49 U.S.C. 111 (1)) on transportation statistics to the President and Congress. *The Transportation Statistics Annual Report (TSAR)*, provides a data overview of U.S. transportation issues. As required by Congress, each TSAR has two essential components: a review of the state of transportation statistics with recommendations for improvements and a presentation of the data. The BTS publication *National Transportation Statistics (NTS)*, a companion report to the TSAR, has more comprehensive and longer time-series data. NTS presents information on the U.S. transportation system, including its physical components, safety record, economic performance, energy use, and environmental impacts. The BTS publication *State Transportation Statistics* presents a statistical profile of transportation in the 50 states and the District of Columbia. This profile includes infrastructure, freight movement and passenger travel, system safety, vehicles, transportation-related economy and finance, energy usage and the environment.

The principal compiler of data on public roads and on operation of motor vehicles is the U.S. Department of Transportation’s (DOT) Federal Highway Administration (FHWA). These data appear in FHWA’s annual *Highway Statistics* and other publications.

The U.S. National Highway Traffic Safety Administration (NHTSA), through its *Traffic Safety Facts FARS/GES Annual Report*, presents descriptive statistics about traffic crashes of all severities, from those that result in property damage to those

that result in the loss of human life. The data for this report is a compilation of motor vehicle crash data from the *Fatality Analysis Reporting System (FARS)* and the *General Estimates System (GES)*. For other publications and reports, go to the National Center for Statistics and Analysis (NCSA), Publications and Data Request. The Web site is located at <<http://www-nrd.nhtsa.dot.gov/CAT/index.aspx>>. DOT's Federal Railroad Administration (FRA), Office of Safety Analysis presents railroad safety information including accidents and incidents, inspections and highway-rail crossing data in its annual report *Railroad Safety Statistics*. The Web site is located at <<http://safetydata.fra.dot.gov/officeofsafety>>.

Data are also presented in many nongovernment publications. Among them are the weekly and annual *Cars of Revenue Freight Loaded* and the annual *Yearbook of Railroad Facts*, both published by the Association of American Railroads, Washington, DC; *Public Transportation Fact Book*, containing electric railway and motorbus statistics, published annually by the American Public Transportation Association, Washington, DC; and *Injury Facts*, issued by the National Safety Council, Chicago, IL.

Civil aviation—Federal promotion and regulation of civil aviation have been carried out by the Federal Aviation Administration (FAA) and the Civil Aeronautics Board (CAB). The CAB promoted and regulated the civil air transportation industry within the United States and between the United States and foreign countries. The Board granted licenses to provide air transportation service, approved or disapproved proposed rates and fares, and approved or disapproved proposed agreements and corporate relationships involving air carriers. In December 1984, the CAB ceased to exist as an agency. Some of its functions were transferred to the DOT, as outlined below. The responsibility for investigation of aviation accidents resides with the National Transportation Safety Board.

The Office of the Secretary, DOT aviation activities include: negotiation of international air transportation rights, selection

of U.S. air carriers to serve capacity-controlled international markets, oversight of international rates and fares, maintenance of essential air service to small communities, and consumer affairs. DOT's Bureau of Transportation Statistics (BTS) handles aviation information functions formerly assigned to CAB. Prior to BTS, the Research and Special Programs Administration handled these functions.

The principal activities of the FAA include: the promotion of air safety; controlling the use of navigable airspace; prescribing regulations dealing with the competency of airmen, airworthiness of aircraft and air traffic control; operation of air route traffic control centers, airport traffic control towers, and flight service stations; the design, construction, maintenance, and inspection of navigation, traffic control, and communications equipment; and the development of general aviation.

The CAB published monthly and quarterly financial and traffic statistical data for the certificated route air carriers. BTS continues these publications, including both certificated and noncertificated (commuter) air carriers. The FAA annually publishes data on the use of airway facilities; data related to the location of airmen, aircraft, and airports; the volume of activity in the field of nonair carrier (general aviation) flying; and aircraft production and registration.

General aviation comprises all civil flying (including such commercial operations as small demand air taxis, agriculture application, powerline patrol, etc.) but excludes certificated route air carriers, supplemental operators, large-aircraft commercial operators, and commuter airlines.

Air carriers and service—The CAB previously issued "certificates of public convenience and necessity" under Section 401 of the Federal Aviation Act of 1958 for scheduled and nonscheduled (charter) passenger services and cargo services. It also issued certificates under Section 418 of the Act to cargo air carriers for domestic all-cargo service only. The DOT Office of the Secretary now issues the certificates under a "fit, willing, and able" test

of air carrier operations. Carriers operating only a 60-seat-or-less aircraft are given exemption authority to carry passengers, cargo, and mail in scheduled and nonscheduled service under Part 298 of the DOT (formerly CAB) regulations. Exemption authority carriers who offer scheduled passenger service to an essential air service point must meet the “fit, willing, and able” test.

Vessel shipments, entrances, and clearances—Shipments by dry cargo vessels comprise shipments on all types of watercraft, except tanker vessels; shipments by tanker vessels comprise all types of cargo, liquid and dry, carried by tanker vessels.

A vessel is reported as entered only at the first port which it enters in the United States, whether or not cargo is unloaded at that port. A vessel is reported as cleared only at the last port at which clearance is made to a foreign port, whether or not it takes on cargo. Army and Navy vessels entering or clearing without commercial cargo are not included in the figures.

Units of measurement—Cargo (or freight) tonnage and shipping weight both represent the gross weight of the cargo including the weight of containers, wrappings, crates, etc. However, shipping weight excludes lift and cargo vans and similar substantial outer containers. Other tonnage figures generally refer to stowing capacity of vessels, 100 cubic feet being called 1 ton. Gross tonnage comprises the space within the frames and the ceiling of the hull, together with those closed-in spaces above deck available for cargo, stores, passengers, or crew, with certain minor exceptions. Net or registered tonnage is the gross tonnage less the spaces occupied by the propelling machinery, fuel, crew quarters, master’s cabin, and navigation spaces. Substantially, it represents space available for cargo and passengers. The net tonnage capacity of a ship may bear little relation to weight of cargo. Deadweight tonnage is the weight in long tons required to depress a vessel from light water line (that is, with only the machinery and equipment on board)

to load line. It is, therefore, the weight of the cargo, fuel, etc., which a vessel is designed to carry with safety.

Federal-aid highway systems—The Intermodal Surface Transportation Efficiency Act (ISTEA) of 1991 eliminated the historical Federal-Aid Highway Systems and created the National Highway System (NHS) and other federal-aid highway categories. The final NHS was approved by Congress in December of 1995 under the National Highway System Designation Act.

Functional systems—Roads and streets are assigned to groups according to the character of service intended. The functional systems are (1) arterial highways that generally handle the long trips, (2) collector facilities that collect and disperse traffic between the arterials and the lower systems, and (3) local roads and streets that primarily serve direct access to residential areas, farms, and other local areas.

Regulatory bodies—The Federal Energy Regulatory Commission (FERC) is an independent agency that regulates the interstate transmission of electricity, natural gas, and oil. FERC also reviews proposals to build liquefied natural gas (LNG) terminals and interstate natural gas pipelines as well as licensing hydropower projects. The Energy Policy Act of 2005 gave FERC additional responsibilities such as regulating the transmission and wholesale sales of electricity in interstate commerce. See source for more details.

Railroads—The Surface Transportation Board (STB) was created in the Interstate Commerce Commission Termination Act of 1995, Pub. L. No. 104-88, 109 Stat. 803 (1995) (ICCTA), and is the successor agency to the Interstate Commerce Commission. The STB is an economic regulatory agency that Congress charged with the fundamental missions of resolving railroad rate and service disputes and reviewing proposed railroad mergers. The STB is decisionally independent, although it is administratively affiliated with the Department of Transportation.

The STB serves as both an adjudicatory and a regulatory body. The agency has jurisdiction over railroad rate and service

issues and rail restructuring transactions (mergers, line sales, line construction, and line abandonments); certain trucking company, moving van, and non-contiguous ocean shipping company rate matters; certain intercity passenger bus company structure, financial, and operational matters; and rates and services of certain pipelines not regulated by the Federal Energy Regulatory Commission. Other ICC regulatory functions were either eliminated or transferred to the Federal Highway Administration or the Bureau of Transportation Statistics within DOT.

Class I Railroads are regulated by the STB and subject to the Uniform System of Accounts and required to file annual and periodic reports. Railroads are classified based on their annual operating revenues. The class to which a carrier belongs is determined by comparing its adjusted operating revenues for 3 consecutive years to the following scale: Class I, \$250 million or more; Class II, \$20 million to \$250 million; and Class III, \$0 to \$20 million. Operating revenue dollar ranges are indexed for inflation.

Postal Service—The U.S. Postal Service provides mail processing and delivery services within the United States. The

Postal Reorganization Act of 1970 created the Postal Service, effective July 1971, as an independent establishment of the Federal Executive Branch.

Revenue and cost analysis describes the Postal Service's system of attributing revenues and costs to classes of mail and service. This system draws primarily upon probability sampling techniques to develop estimates of revenues, volumes, and weights, as well as costs by class of mail and special service. The costs attributed to classes of mail and special services are primarily incremental costs which vary in response to changes in volume; they account for roughly 60 percent of the total costs of the Postal Service. The balance represents "institutional costs." Statistics on revenues, volume of mail, and distribution of expenditures are presented in the Postal Service's annual report, *Cost and Revenue Analysis*, and its *Annual Report of the Postmaster General* and its annual *Comprehensive Statement on Postal Operations*.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

— Represents or rounds to zero. NA Not available. Z Less than 50. ¹ See footnote 1, Table 1042. Injuries classified as serious. ² See footnote 2, Table 1042. Injuries classified as serious. ³ See footnote 3, Table 1042. Injuries classified as serious. ⁴ Data on deaths are from U.S. National Highway Traffic Safety Administration and are based on deaths within 30 days of the accident. Includes only police reported crashes. For more details, see Table 1075. ⁵ Accidents which result in damages to railroad property. Grade crossing accidents are also included when classified as a train accident. Deaths exclude fatalities in railroad-highway grade crossing accidents. ⁶ Includes motor bus, commuter rail, heavy rail, light rail, demand response, van pool, and automated guideway. Starting with 2002, only injuries requiring immediate medical treatment away from the scene now qualify as reportable. ⁷ Accidents resulting in death, injury, or requiring medical treatment beyond first aid, damages exceeding \$500, or a person's disappearance. ⁸ Covers accidents involving commercial vessels which must be reported to U.S. Coast Guard if there is property damage exceeding \$25,000; material damage affecting the seaworthiness or efficiency of a vessel; stranding or grounding; loss of life; or injury causing a person's incapacity for more than 3 days. ⁹ Beginning 1990, pipeline accidents/incidents are credited to year of occurrence; prior data are credited to the year filed. ¹⁰ Other transit includes bus, light rail, commuter rail, demand response, van pool, and automated guideway. Excludes cable car, inclined plane, jitney, and ferry boat. ¹¹ Incidents, deaths, and injuries involving hazardous materials cover all types of transport, excludes pipelines and bulk, nonpackaged water incidents.

— Represents zero. ¹ U.S. air carriers operating under 14 CFR 121. Beginning 2000, includes aircraft with 10 or more seats, previously operating under 14 CFR 135. ² All scheduled service of U.S. air carriers operating under 14 CFR 135. Beginning 2000, only aircraft with fewer than 10 seats. ³ All nonscheduled service of U.S. air carriers operating under 14 CFR 135. ⁴ U.S. civil registered aircraft not operated under 14 CFR 121 or 135. Data from 2006 include 154 deaths aboard a foreign registered aircraft when it collided with a business general aviation aircraft over the Brazilian Amazon jungle. There were no fatalities in the general aviation aircraft.

Table 1044. **On-Time Flight Arrivals and Departures at Major U.S. Airports: 2008**

[In percent. Quarterly, based on gate arrival and departure times for domestic scheduled operations of U.S. major airlines. All U.S. airlines with 1 percent or more of total U.S. domestic scheduled airline passenger revenues are required to report on-time data. A flight is considered on time if it operated less than 15 minutes after the scheduled time shown in the carrier's computerized reservation system. See source for data on individual airlines]

¹ Bridges are structurally deficient if they have been restricted to light vehicles, require immediate rehabilitation to remain open, or are closed. ² Bridges are functionally obsolete if they have deck geometry, load carrying capacity, clearance or approach roadway alignment that no longer meet the criteria for the system of which the bridge is carrying a part.

Ethanol in Gasohol	1,000 gal.(g-e-g) ⁵	2,414,167	2,756,663	3,729,168	4,694,304
Total alternative and replacement fuels	1,000 gal.(g-e-g) ⁵	4,748,243	4,923,590	4,842,577	(NA)
FUEL CONSUMPTION IN NATIVE UNITS					
Alternative fuels:					
Compressed Natural Gas (CNG)	million cubic feet	19,145	20,106	20,724	21,514
Electric ¹	1,000 kwh	175,633	173,967	170,133	167,900
Ethanol, 85 percent (E85) ²	1,000 gallons	43,862	52,881	61,168	75,126
Hydrogen	1,000 kilograms	7	23	37	60
Liquefied Natural Gas (LNG)	1,000 gallons	31,648	33,953	35,567	37,264
Liquefied Petroleum Gas (LPG)	1,000 gallons	286,328	254,285	233,959	205,892
Biodiesel	1,000 gallons	27,980	90,790	250,426	(NA)
Oxygenates:					
Methyl Tertiary Butyl Ether (MTBE)	1,000 gallons	2,309,160	2,035,320	534,912	76,314
Ethanol in Gasohol	1,000 gallons	3,514,909	4,013,679	5,429,217	6,885,690
Total alternative and replacement fuels	(X)	(X)	(X)	(X)	(X)

— Represents zero. X Not applicable. ¹ Excludes gasoline-electric and diesel-electric hybrids because the input fuel is gasoline or diesel rather than an alternative transportation fuel. ² The remaining portion of E85 percent ethanol is gasoline. Consumption data include the gasoline portion of the fuel. ³ For 2007, the EIA estimates that the number of E85 vehicles that are capable of operating on E85, gasoline, or both, is about 7.1 million. Many of these alternative-fueled vehicles (AFVs) are sold and used as traditional gasoline-powered vehicles. In this table, AFVs in use include only those E85 vehicles believed to be used as AFVs. These are primarily fleet-operated vehicles. ⁴ May include P-Series fuel or any other fuel designated by the Secretary of Energy as an alternative fuel in accordance with the Energy Policy Act of 1995. ⁵ Gasoline equivalent gallons.

¹ Value of extra time (delay) and the extra fuel consumed by vehicles traveling at slower speeds. Fuel cost per gallon is the average price for each state. ² The hours of extra travel time divided by the number of urban area peak period travelers. This is an annual measure indicating the sum of all extra travel time that would occur during the year for the average traveler.

Table 1069. **Fatal Motor Vehicle Accidents—National Summary: 1990 to 2007**

[Based on data from the Fatality Analysis Reporting System (FARS). FARS gathers data on accidents that result in loss of human life. FARS is operated and maintained by National Highway Traffic Safety Administration's (NHTSA), National Center for Statistics and Analysis (NCSA). FARS data are gathered on motor vehicle accidents that occurred on a roadway customarily open to the public, resulting in the death of a person within 30 days of the accident. Collection of these data depend on the use of police, hospital, medical examiner/coroner, and Emergency Medical Services reports; state vehicle registration, driver licensing, and highway department files; and vital statistics documents and death certificates. See source for further detail]

Table 1073. **Fatalities by Highest Driver Blood Alcohol Concentration (BAC) in the Crash: 1990 to 2007**

[g/dl means grams per deciliter. A motor vehicle crash is considered to be alcohol-impaired if at least one driver involved in the crash is determined to have had a BAC of .08 g/dL or higher. Thus, any fatality that occurs in an alcohol-impaired crash is considered an alcohol-impaired-driving fatality. The term alcohol-impaired does not indicate that a crash or fatality was caused by the presence of alcohol. A person is considered to be legally impaired with a BAC of .08 g/dl or more]

Table 1078. **Passenger Transit Industry—Summary: 1980 to 2007**

[6,510 represents \$6,510,000,000. Includes Puerto Rico. Includes aggregate information for all transit systems in the United States. Excludes nontransit services such as taxicab, school bus, unregulated jitney(a small bus or automobile that transport passengers on a route for a small fare), sightseeing bus, intercity bus, and special application mass transportation systems (e.g., amusement parks, airports, island, and urban park ferries). Includes active vehicles only]

NA Not available. ¹ Represents the sum of federal, state, and local assistance, and that portion of directly generated funds that accrue from tax collections, toll transfers from other sectors of operations, and bond proceeds. ² These are any funds generated from taxes controlled by the transit agency. ³ Funds data are included in local government data through 1993; ⁴ Through 1985, data for state and local are combined. ⁵ This operation (also called paratransit or dial-a-ride) is comprised of passenger cars, vans or small buses operating in response to calls from passengers or their agents to the transit operator, who then dispatches a vehicle to pick up the passengers and transport them to their destinations. ⁶ Through 1990, represents employee equivalents of 2,080 hours = one employee; beginning 1995, equals actual employees.

— Represents zero. ¹ Vehicles operated in maximum services (VOMS) include directly operated (DO) and Purchase Transportation (PT) by mode. ² The mileage in each direction over which public transportation vehicles travel while in revenue service. The mileage is computed without regard to the number of traffic lanes or rail tracks existing in the right-of-way. ³ Number of stations that comply with the American with Disabilities Act of 1992 (ADA). Additional stations may be wheelchair accessible but not comply with other provisions of the ADA. ⁴ Includes light rail, not shown separately. ⁵ Excludes commuter-type services operated independently by AMTRAK.

Table 1089. **U.S. Postal Service Rates for Letters and Postcards: 1991 to 2009**

[In dollars. International rates exclude Canada and Mexico]

Domestic mail date of rate change	Letters		Postcards	Express mail— first 1/2 pound	International air mail date of rate change	Let- ters— first ounce ¹	Post- cards	Aero- grammes
	First ounce	Each added ounce						
1991 (Feb. 3)	0.29	0.23	0.19	9.95	First 1/2 ounce			
1995 (Jan. 1)	0.32	0.23	0.20	10.75	1991 (Feb. 3)	0.50	0.40	0.45
1999 (Jan. 10)	0.33	0.22	0.20	11.75	1995 (July 9)	0.60	0.40	0.45
2001 (Jan. 7)	0.34	0.21	0.20	12.25	1999 (Jan. 10)	0.60	0.50	0.50
2001 (July 1)	0.34	0.23	0.21	12.45	First ounce ¹			
2002 (June 30)	0.37	0.23	0.23	13.65	2001 (Jan. 7)	0.80	0.70	0.70
2006 (Jan. 8)	0.39	0.24	0.24	14.40	2006 (Jan. 8)	0.84	0.75	0.75
2007 (May 14)	0.41	0.17	0.26	16.25	2007 (May 14)	0.90	0.90	(²)
2008 (May 12)	0.42	0.17	0.27	³ 12.60	2008 (May 12)	0.94	0.94	(²)
2009 (May 11)	0.44	0.17	0.28	⁴ 13.05	2009 (May 11)	0.98	0.98	(²)

¹ International letter prices after the first ounce vary according to the price group that is applicable to each destination country. ² Aerogrammes were discontinued on May 14, 2007. ³ On May 12, 2008, the Postal Service initiated a zoned pricing structure for Express Mail. Prices for a mail piece weighing up to a half-pound range from \$12.60 to zones 1 and 2 to \$19.50 to zone 8. ⁴ Express Mail prices increased on January 18, 2009. Prices for a mail piece weighing up to a half-pound range from \$13.05 to zones 1 and 2 to \$21.20 to zone 8.

Information and Communications

This section presents statistics on the various information and communications media: publishing, including newspapers, periodicals, books, and software; motion pictures, sound recordings, broadcasting, and telecommunications; and information services, such as libraries. Statistics on computer use and Internet access are also included. Data on the usage, finances, and operations of the U.S. Postal Service previously shown in this section are now presented in Section 23, Transportation.

Information industry—The U.S. Census Bureau's *Service Annual Survey, Information Services Sector*, provides estimates of operating revenue of taxable firms and revenues and expenses of firms exempt from federal taxes for industries in the information sector of the economy. Similar estimates were previously issued in the *Annual Survey of Communications Services*. Data are based on the North American Industry Classification System (NAICS), and the information sector is a newly created economic sector. It comprises establishments engaged in the following processes: (a) producing and distributing information and cultural products, (b) providing the means to transmit or distribute these products as well as data or communications, and (c) processing data. It includes establishments previously classified in the Standard Industrial Classification (SIC) in manufacturing (publishing); transportation, communications, and utilities (telecommunications and broadcasting); and services (software publishing, motion picture production, data processing, online information services, and libraries).

This new sector is comprised of industries which existed previously, were revised from previous industry definitions, or are completely new industries. Among those which existed previously are newspaper publishers, motion picture and video production, and online information services. Revised industries include book publishers, libraries, and archives. Newly created

industries include database and directory publishers, record production, music publishers, sound recording studios, cable networks, wired telecommunications carriers, paging, and satellite telecommunications.

Data from 1998 to 2003 are based on the 1997 NAICS; beginning 2004, data are based on the 2002 NAICS. Major revisions in many communications industries affect the comparability of these data. The following URL contains detailed information about NAICS <<http://www.census.gov/epcd/www/naics.html>>. See also the text in Section 15, Business Enterprise.

Several industries in the information sectors have been consolidated: paging is now included in Wireless Telecommunications Carriers (except Satellite). Cable and other program distribution and most Internet service providers are now included in Wired Telecommunications Carriers.

The 1997 Economic Census was the first economic census to cover the new information sector of the economy. The census, conducted every 5 years, for the years ending "2" and "7," provides information on the number of establishments, receipts, payroll, and paid employees for the United States and various geographic levels. The most recent reports are from the 2007 Economic Census. This census was conducted in accordance with the 2007 NAICS.

The Federal Communications Commission (FCC), established in 1934, regulates wire and radio communications. Only the largest carriers and holding companies file annual financial reports which are publicly available. The FCC has jurisdiction over interstate and foreign communication services but not over intrastate or local services. The gross operating revenues of the telephone carriers reporting publicly available data annually to the FCC, however, are estimated to cover

about 90 percent of the revenues of all U.S. telephone companies. Data are not service comparable with Census Bureau's *Annual Survey* because of coverage and different accounting practices for those telephone companies which report to the FCC.

Reports filed by the broadcasting industry cover all radio and television stations operating in the United States. The private radio services represent the largest and most diverse group of licensees regulated by the FCC. These services provide voice, data communications, point-to-point, and point-to-multipoint radio communications for fixed and mobile communicators. Major users of these services are small businesses, the aviation industry, the maritime trades, the land transportation industry, the manufacturing industry, state and local public safety and governmental authorities, emergency medical service providers, amateur radio operators, and personal radio operations (CB and the General Mobile Radio Service). The FCC also licenses entities as private and common carriers. Private and common carriers provide fixed and land mobile communications service on a for-profit basis. Principal sources of wire,

radio, and television data are the FCC's *Annual Report* and its annual *Statistics of Communications Common Carriers* <<http://fcc.gov/wcb/iatd/stats.html>>.

Statistics on publishing are available from the Census Bureau, as well as from various private agencies. Editor & Publisher Co., New York, NY, presents annual data on the number and circulation of daily and Sunday newspapers in its *International Year Book*. The Book Industry Study Group, New York, NY, collects data on books sold and domestic consumer expenditures. Data on academic and public libraries are collected by the Institute of Museums and Library Services. Data on Internet use by adults are collected by the Pew Internet and American Life Project, Washington, DC, and Media-mark Research, Inc., New York, NY.

Advertising—Data on advertising previously shown in this section are now presented in Section 27, Accommodation, Food Services, and Other Services.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Table 1091. **Information Industries—Establishments, Employees, and Payroll:**
2005 and 2006

[For establishments with payroll (3,402.6 represents 3,402,600). Excludes most government employees, railroad employees, and self-employed persons. For statement on methodology, see Appendix III]

Table 1094. **Media Usage and Consumer Spending: 2004 to 2012**

[Estimates for time spent were derived using rating data for television and cable television, survey research for radio, mobile, out-of-home media and yellow pages, and consumer purchase data (units, admissions, access) for books, home video, in-flight entertainment, Internet, newspapers, magazines, box office, recorded music, videogames. Adults 18 and older were the basis for estimates for newspapers, consumer books, consumer magazines, in-flight entertainment, out-of-home media, yellow pages and home video. Persons 12 and older were the basis for the estimates for box office, broadcast TV, cable TV Internet, mobile, radio recorded, music and videogames]

Revenue from resale service	Mil. dol.	167	1,756	7,600	5,341	4,871	5,760	5,226	5,750	6,077

¹ Beginning 2001, detailed financial data are only filed by regional Bell-operating companies. Access lines and calls reported by all subject reporting companies. ² Gross operating revenues, gross plant, and total assets of reporting carriers estimated at more than 90 percent of total industry. New accounting rules became effective in 1990; prior years may not be directly comparable on a one-to-one basis. Includes Virgin Islands, and prior to 1995, Puerto Rico. ³ The reporting threshold for carriers is \$100 million in annual operating revenue. ⁴ Beginning 1995, data are for all U.S. points, and include calls to and from Alaska, Hawaii, Puerto Rico, Guam, the U.S. Virgin Islands, and offshore U.S. points. Beginning 1995, carriers first started reporting traffic to and from Canada and Mexico. Data for Canada and Mexico in prior years are staff estimates.

Table 1118. Household Internet Usage In and Outside of the Home by Selected Characteristics: 2007

[As of October. Civilian noninstitutional population 16 years and older. Based on the Current Population Survey. Householder refers to the person (or one of the persons) in whose name the housing unit is owned or rented (maintained) or, if there is no such person, any adult member, excluding roomers, boarders, or paid employees. If the house is owned or rented jointly by a married couple, the householder may be either the husband or the wife. The person designated as the householder is the "reference person" to whom the relationship of all other household members, if any, is recorded]

Characteristics	Total households	In the home			Anywhere		No internet use	
		Percent			Total households	Percent of total	Total households	Percent of total

Table 1121. **Adult Computer and Adult Internet Users by Selected Characteristics: 2000 to 2009**

[Percent of persons 18 years old and over. Represents persons who use a computer or the Internet at a workplace, school, home, or anywhere else, on at least an occasional basis. Based on telephone surveys of persons with landline telephones. In 2009, 2,253 persons were interviewed, including 651 cell phone users. The response rate for the landline sample was 20.6 percent and 18.2 percent for the cell sample. For 2000, Internet users include persons who ever go online to access the Internet or World Wide Web or to send and receive e-mail. For 2005, 2008 and 2009 Internet users include those who at least occasionally use the Internet or send and receive e-mail]

Banking, Finance, and Insurance

This section presents data on the nation's finances, various types of financial institutions, money and credit, securities, insurance, and real estate. The primary sources of these data are publications of several departments of the federal government, especially the U.S. Treasury Department, and independent agencies such as the Federal Deposit Insurance Corporation, the Board of Governors of the Federal Reserve System, and the Securities and Exchange Commission. National data on insurance are available primarily from private organizations, such as the American Council of Life Insurers and the Insurance Information Institute.

Flow of funds—The flow of funds accounts of the Federal Reserve Board bring together statistics on all of the major forms of financial instruments to present an economy-wide view of asset and liability relationships. In flow form, the accounts relate borrowing and lending to one another and to the nonfinancial activities that generate income and production. Each claim outstanding is included simultaneously as an asset of the lender and as a liability of the debtor. The accounts also indicate the balance between asset totals and liability totals over the economy as a whole. Several publications of the Federal Reserve Board contain information on the flow of funds accounts: Summary data on flows and outstandings, in the statistical release *Flow of Funds Accounts of the United States* (quarterly); and concepts and organization of the accounts in *Guide to the Flow of Funds Accounts* (2000). Data are also available on the Federal Reserve Board's Web site <<http://www.federalreserve.gov/>>.

Survey of Consumer Finances (SCF)—The Federal Reserve Board, in cooperation with the Treasury Department, sponsors this survey, which is conducted every 3 years to provide detailed information on the finances of U.S. families. Among the topics covered are the balance sheet, pension, income, and other

demographic characteristics of U.S. families. The survey also gathers information on the use of financial institutions. Since 1992, data for the SCF have been collected by the National Organization for Social Science and Survey Research at the University of Chicago. Data and information on the survey are available on the Web site of the Federal Reserve Board: <<http://www.federalreserve.gov/pubs/oss/oss2/scfindex.html>>.

Banking system—Banks in this country are organized under the laws of both the states and the federal government and are regulated by several bank supervisory agencies. National banks are supervised by the Comptroller of the Currency. *Reports of Condition* have been collected from national banks since 1863. Summaries of these reports are published in the Comptroller's *Annual Report*, which also presents data on the structure of the national banking system.

The Federal Reserve System was established in 1913 to exercise central banking functions, some of which are shared with the U.S. Treasury. It includes national banks and such state banks that voluntarily join the system. Statements of state bank members are consolidated by the Federal Reserve Board with data for national banks collected by the Comptroller of the Currency into totals for all member banks of the system. Balance sheet data for member banks and other commercial banks are available on the Federal Reserve Board's Web site at <<http://www.federalreserve.gov/econresdata/releases/statisticsdata.htm>>.

The Federal Deposit Insurance Corporation (FDIC), established in 1933, insures each depositor up to \$250,000. Major item balance sheet and income data for all insured financial institutions are published in the *FDIC Quarterly Banking Profile*. This publication is also available on the Internet at the following address: <<http://www.fdic.gov>>. Quarterly financial information for individual institutions is available through the FDIC and Federal

Financial Institutions Examination Council Web sites at <<http://www.fdic.gov>> and <<http://www.ffiec.gov>>.

Credit unions—Federally chartered credit unions are under the supervision of the National Credit Union Administration. State-chartered credit unions are supervised by the respective state supervisory authorities. The administration publishes comprehensive program and statistical information on all federal and federally insured state credit unions in the *Annual Report of the National Credit Union Administration*.

Other credit agencies—Insurance companies, finance companies dealing primarily in installment sales financing, and personal loan companies represent important sources of funds for the credit market. Statistics on loans, investments, cash, etc., of life insurance companies are published principally by the American Council of Life Insurers in its *Life Insurers Fact Book*. Consumer credit data are available on the Federal Board's Web site at <<http://www.federalreserve.gov/econresdata/releases/statisticsdata.htm>>.

Government corporations and credit agencies make available credit of specified types or to specified groups of private borrowers, either by lending directly or by insuring or guaranteeing loans made by private lending institutions. Data on operations of government credit agencies, along with other government corporations, are available in reports of individual agencies.

Securities—The Securities and Exchange Commission (SEC) was established in 1934 to protect the interests of the public and investors against malpractices in the securities and financial markets and to provide the fullest possible disclosure of information regarding securities to the investing public.

Data on the securities industry and securities transactions are also available from a number of private sources. The Securities Industry and Financial Markets Association, New York, NY, <<http://www.sifma.org>>, publishes the *Securities Industry*

Fact Book and *Securities Industry Yearbook*. The Investment Company Institute, Washington, DC, <<http://www.ici.org>>, publishes a reference book, research newsletters, and a variety of research reports that examine the industry, its shareholders, or industry issues. The annual *Mutual Fund Fact Book* is a guide to trends and statistics observed in the investment company industry. *Fundamentals* is a newsletter summarizing the findings of major Institute research projects. Institute research reports provide a detailed examination of shareholder demographics and other aspects of fund ownership.

Among the many sources of data on stock and bond prices and sales are the New York Stock Exchange, New York, NY, <<http://www.nyse.com>>; NASDAQ, Washington, DC, <<http://www.nasdaq.com>>; Global Financial Data, Los Angeles, CA, <<http://www.globalfinancialdata.com>>; and Dow-Jones & Company, Inc., New York, NY, <<http://www.djindexes.com>>.

Insurance—Insuring companies, which are regulated by the various states or the District of Columbia, are classified as either life or property. Both life and property insurance companies may underwrite health insurance. Insuring companies, other than those classified as life, are permitted to underwrite one or more property lines provided they are so licensed and have the necessary capital or surplus. There are a number of published sources for statistics on the various classes of insurance—life, health, fire, marine, and casualty. Organizations representing certain classes of insurers publish reports for these classes. The American Council of Life Insurers publishes statistics on life insurance purchases, ownership, benefit payments, and assets in its *Life Insurers Fact Book*.

Statistical reliability—For a discussion of statistical collection, estimation, and sampling procedures and measures of reliability applicable to data from the Census Bureau and the Federal Reserve Board's Survey of Consumer Finances, see Appendix III.

75 years old and over	41.5	6.1	30.0	20.0	40.0	75.0	35.0	5.0	100.0

B Base figure too small. ¹ Includes other types of financial assets, not shown separately. ² Checking, savings, and money market deposit accounts, money market mutual funds, and call accounts at brokerages. ³ Covers only those stocks that are directly held by families outside mutual funds, retirement accounts, and other managed assets. ⁴ Excludes money market mutual funds and indirectly held mutual funds and includes all other types of directly held pooled investment funds, such as traditional open-ended and closed-end mutual funds, real estate investment trusts, and hedge funds. ⁵ The tax-deferred retirement accounts consist of IRAs, Keogh accounts, and certain employer-sponsored accounts. Employer-sponsored accounts include 401(k), 403(b), and thrift saving accounts from current or past jobs; other current job plans from which loans or withdrawals can be made; and accounts from past jobs from which the family expects to receive the account balance in the future. ⁶ The value of such policies according to their current cash value, not their death benefit. ⁷ Includes personal annuities and trusts with an equity interest and managed investment accounts. ⁸ Percentiles of income distribution in 2007 dollars. 20th: \$20,600, 40th: \$36,500, 60th: \$59,600, 80th: \$98,200, 90th: \$140,900. Percentile: A value on a scale of zero to 100 that indicates the percent of a distribution that is equal to or below it. For example, a family with income in the 80th percentile has income equal to or better than 80 percent of all other families. ⁹ Median value of financial asset for families holding such assets.

Table 1138. Household Debt-Service Payments and Financial Obligations as a Percentage of Disposable Personal Income: 1990 to 2008

[As of end of year, seasonally adjusted. Household debt service ratio is an estimate of the ratio of debt payments to disposable personal income. Debt payments consist of the estimated required payments on outstanding mortgage and consumer debt. The financial obligations ratio adds automobile lease payments, rental payments on tenant-occupied property, homeowners' insurance, and property tax payments to the debt service ratio]

Year	Household debt service ratio	Financial obligations ratio			Year	Household debt service ratio	Financial obligations ratio		
		Total	Renter	Home-owner			Total	Renter	Home-owner

Table 1144. **FDIC-Insured Financial Institutions—Number of Offices and Deposits by State: 2008**

[As of June 30 (7,025.8 represents \$7,025,800,000,000). Includes insured U.S. branches of foreign banks. The term "offices" includes both main offices and branches. "Banking office" is defined to include all offices and facilities that actually hold deposits, and does not include loan production offices, computer centers, and other nondeposit installations, such as automated teller machines (ATMs). Several institutions have designated home offices that do not accept deposits; these have been included to provide a more complete listing of all offices. The figures for each geographical area only include deposits of offices located within that area. Based on the Summary of Deposits survey]

Table 1145. **U.S. Banking Offices of Foreign Banks—Summary: 1990 to 2008**

[In billions of dollars, except as indicated (834 represents \$834,000,000,000). As of December. Covers the U.S. offices of foreign banking organizations that are located in the 50 states and the District of Columbia. Offices located in Puerto Rico, American Samoa, Guam, the Virgin Islands and other U.S.-affiliated insular areas are excluded. Foreign-owned institutions are those owned by a bank located outside of the United States and its affiliated insular areas. The U.S. offices of foreign banking organizations consist of U.S. branches and agencies of foreign banks and bank subsidiaries of foreign banking organizations. The latter are U.S. commercial banks of which more than 25 percent is owned by a foreign banking organization or where the relationship is reported as being a controlling relationship by the filer of the FR Y-10 (Report of Changes in Organizational Structure) report form]

Table 1147. **Noncash Payments by Method of Payment and ATM Cash Withdrawals: 2003 and 2006**

[81.4 represents 81,400,000,000. Based on two data collection efforts to estimate the annual number and value of significant types of noncash payments. Estimates of check payments and ATM withdrawals were based on findings from the Depository Institutions Payments Study (2007 DI study). Electronic payments volume estimates were based on findings from the Electronic Payments Study and supplemented by the 2007 DI study. The Depository Institutions Payments Study collected the number and value of different types of payments from deposit accounts at a representative, random sample of depository institutions. A total of 1,437 depository institutions (commercial banks, savings institutions, and credit unions) from a stratified random sample of 2,700 institutions provided data for the survey. The Electronic Payments Study estimated the number and value of electronic payments in the United States for calendar year 2006. Data were collected by surveying payment networks and card issuers. Of the 73 organizations asked to participate, 65 of the largest organizations provided data. Respondents to this study collectively accounted for an estimated 99.8 percent of the electronic transactions and 99.9 percent of the electronic payments value in the United States]

Method of payment	Transactions (bil.)		Value (tril. dol.)		Average value per transaction (dol.)	
	2003	2006	2003	2006	2003	2006
Noncash payments, total	81.4	93.3	67.6	75.8	830	813

Signature ¹	10.3	16.0	0.4	0.6	42	40
PIN ²	5.3	9.4	0.2	0.3	38	37
Credit cards ³	19.0	21.7	1.7	2.1	89	98
Electronic benefits transfer cards	0.8	1.1	(Z)	(Z)	26	27
Memo:						
ATM cash withdrawals	5.9	5.8	0.5	0.6	85	99
Checks (written) ⁴	37.6	33.1	41.2	42.4	1,096	1,280
Checks converted to ACH	0.3	2.6	0.1	0.7	187	267

Z Less than \$50 billion. ¹ Signature debit card payments are made like credit card payments, but use funds from transaction deposit accounts. ² PIN debit card payments also use funds from transaction deposit accounts and typically require the entry of the same personal identification number (PIN) used to access automated teller machines (ATMs). Excludes a portion estimated to have been returned to the customer as cash. ³ Credit cards include both general purpose and private-label cards. ⁴ Includes the use of checks as source documents to initiate electronic payments.

Phone (talk in person)	(NA)	43	42	42	57	(NA)	(NA)	(NA)

NA Not available. ¹ A debit card is a card that automatically deducts the amount of a purchase from the money in an account. ² A smart card is a type of payment card containing a computer chip which is set to hold a sum of money. As the card is used, purchases are subtracted from that sum. Prepaid cards are cards that contain a stored value, or a value that has been paid up-front, allowing you to use the card much like cash. As you use the card, the prepaid value is drawn down. Examples are phone cards and gift cards. Smart cards are different from prepaid cards in that you can add money to the card at special machines designed for smart cards or sometimes at ATMs.

¹ The question on ATM cards asked whether any member of the household had an ATM card, not whether the member used it. The other questions asked about usage of other instruments. ² The question on software asked whether the respondent or spouse/partner uses any type of computer software to help in managing their money. ³ Low income is defined as less than 50 percent of the median household income; moderate income is 50 to 80 percent of the median; middle income is 80 to 120 percent of the median; and upper income is greater than 120 percent of the median. Each survey refers to income in the previous year. Median income was \$41,990 in 2000 and \$48,201 in 2006.

Table 1157. **Mortgage Originations and Delinquency and Foreclosure Rates: 1990 to 2008**

[In percent, except as indicated (459 represents \$459,000,000,000) Covers one- to four-family residential nonfarm mortgage loans. Mortgage origination is the making of a new mortgage, including all steps taken by a lender to attract and qualify a borrower, process the mortgage loan, and place it on the lender's books. Based on the National Delinquency Survey which covers 45 million loans on one- to four-unit properties, representing between 80 to 85 percent of all 'first-lien' residential mortgage loans outstanding. Loans surveyed were reported by approximately 120 lenders, including mortgage bankers, commercial banks, and thrifts]

¹ Currency outside U.S. Treasury, Federal Reserve Banks and the vaults of depository institutions. ² Outstanding amount of U.S. dollar-denominated travelers' checks of nonbank issuers. Travelers' checks issued by depository institutions are included in demand deposits. ³ Demand deposits at domestically chartered commercial banks, U.S. branches and agencies of foreign banks, and Edge Act corporations (excluding those amounts held by depository institutions, the U.S. government, and foreign banks and official institutions) less cash items in the process of collection and Federal Reserve float. ⁴ Negotiable order of withdrawal (NOW) and automatic transfer service (ATS) balances at domestically chartered commercial banks, U.S. branches and agencies of foreign banks, Edge Act corporations, and thrift institutions, credit union share draft balances, and demand deposits at thrift institutions. ⁵ Money market deposit accounts (MMDAs). ⁶ Small-denomination time deposits are those issued in amounts of less than \$100,000. All Individual Retirement Account (IRA) and Keogh account balances at commercial banks and thrift institutions are subtracted from small time deposits.

Table 1166. **U.S. Purchases and Sales of Foreign Bonds and Stocks, 1990 to 2008, and by Selected Country, 2008**

[In billions of dollars (31.2 represents \$31,200,000,000). Covers transactions in all types of long-term foreign securities by foreigners as reported to the Treasury International Capital Reporting System by banks, brokers, and other entities in the United States. Data cover new issues of securities, transactions in outstanding issues, and redemptions of securities. Includes transactions executed in the United States for the account of foreigners, and transactions executed abroad for the account of reporting institutions and their domestic customers. Data by country show the country of location of the foreign buyers and sellers who deal directly with reporting institutions in the United States. The data do not necessarily indicate the country of beneficial owner or issuer. The term "foreigner" covers all institutions and individuals domiciled outside the United States, including U.S. citizens domiciled abroad, and the foreign branches, subsidiaries, and other affiliates abroad of U.S. banks and businesses; the central governments, central banks, and other official institutions of foreign countries; and international and regional organizations. "Foreigner" also includes persons in the United States to the extent that they are known by reporting institutions to be acting on behalf of foreigners. Excludes acquisitions of foreign stocks through mergers that involve stock swaps. Including stock swaps, net sales of foreign securities was \$98 billion in 2008. Minus sign (–) indicates net sales by U.S. investors or a net inflow of capital into the United States]

Table 1168. **Foreign Purchases and Sales of U.S. Securities by Type of Security, 1990 to 2008, and by Selected Country, 2008**

[In billions of dollars (18.7 represents \$18,700,000,000). Covers transactions in all types of long-term domestic securities by foreigners as reported to the Treasury International Capital Reporting System by banks, brokers, and other entities in the United States (except nonmarketable U.S. Treasury notes, foreign series; and nonmarketable U.S. Treasury bonds and notes, foreign currency series). See headnote, Table 1166. Excludes U.S. equities acquired through mergers and reincorporations that involve stock swaps. Also excludes principal repayment flows on foreign holdings of U.S. government agency and corporate asset-backed securities (ABS). Including stock swaps and accounting for ABS repayment flows, net purchases of U.S. securities was \$219 billion in 2008. Minus sign (-) indicates net sales by foreigners or a net outflow of capital from the United States]

Table 1186. **Automobile Insurance—Average Expenditures Per Insured Vehicle by State: 2000 and 2006**

[In dollars. Average expenditure equals total premiums written divided by liability car-years. A car-year is equal to 365 days of insured coverage for a single vehicle. The average expenditures for automobile insurance in a state are affected by a number of factors, including the underlying rate structure, the coverages purchased, the deductibles and limits selected, the types of vehicles insured, and the distribution of driver characteristics. The NAIC does not rank state average expenditures and does not endorse any conclusions drawn from this data]

¹ Based on the HO-4 renters insurance policy for tenants. Includes broad named-peril coverage for the personal property of tenants. ² Based on the HO-3 homeowner package policy for owner-occupied dwellings, 1–4 family units. Provides “all risks” coverage (except those specifically excluded in the policy) on buildings, broad named-peril coverage on personal property, and is the most common package written. ³ The Texas Insurance Commissioner promulgates residential policy forms which are similar but not identical to the standard forms.

Arts, Recreation, and Travel

This section presents data on the arts, entertainment, and recreation economic sector of the economy, and personal recreational activities, the arts and humanities, and domestic and foreign travel.

Arts, Entertainment, and Recreation Industry—The U.S. Census Bureau's *Service Annual Survey, Arts, Entertainment, and Recreation Sector*, provides estimates of operation revenue of taxable firms and revenues and expenses of firms exempt from federal taxes for industries in this sector of the economy. Data beginning 1998 are based on the North American Industry Classification System (NAICS). Most establishments were previously classified in the Standard Industrial Classification (SIC) in services, some in retail trade. The following URL contains detailed information about NAICS and provides a comparison of the SIC and NAICS <<http://www.census.gov/eos/www/naics/>>. See also the text in Section 15, Business Enterprise.

The Economic Census, conducted every 5 years, for the years ending "2" and "7," provides information on the number of establishments, receipts, payroll, and paid employees for the U.S. and various geographic levels.

Recreation and leisure activities—Data on the participation in various recreation and leisure time activities are based on several sample surveys. Data on the public's involvement with arts events and activities are published by the National Endowment for Arts (NEA). The NEA's Survey of Public Participation in the Arts remains the largest periodic study of arts participation in the United States. The most recent data are from the 2008 survey. Data on participation in fishing,

hunting, and other forms of wildlife-associated recreation are published periodically by the U.S. Department of Interior, Fish and Wildlife Service. The most recent data are from the 2006 survey. Data on participation in various sports recreation activities are published by the National Sporting Goods Association. Mediamark, Inc. also conducts periodic surveys on sports and leisure activities, as well as other topics.

Parks and recreation—The Department of the Interior has responsibility for administering the national parks. The National Park Service publishes information on visits to national park areas in its annual report, *National Park Statistical Abstract. The National Parks: Index (year)* is an annual report which contains brief descriptions, with acreages and visits for each area administered by the service, plus certain "related" areas. This information can be found at: <<http://www.nature.nps.gov/stats>>. Statistics for state parks are compiled by the National Association of State Park Directors.

Travel—Statistics on arrivals and departures to the United States are reported by the International Trade Administration (ITA), Office of Travel & Tourism Industries (OTTI). Data on domestic travel, business receipts and employment of the travel industry, and travel expenditures are published by the research department of the U.S. Travel Association. Other data on household transportation characteristics are in Section 23, Transportation.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Table 1191. **Arts, Entertainment, and Recreation Services—Estimated Revenue: 2000 to 2007**

[In millions of dollars (127,394 represents \$127,394,000,000), except percent. For taxable and tax-exempt employer firms. Except where indicated, estimates adjusted using the results of the 2002 Economic Census. Based on the Service Annual Survey, see Appendix III]

¹ Includes other program funds (nonfederal gifts, interagency transfers, and unobligated balances from prior years) not shown separately. Excludes administrative funds. ² FY1990 and FY1995 include Regular Program Funds, Treasury Funds, Challenge Grant Funds, and Policy, Planning, and Research Funds. FY2000 includes Regular Program Funds and Matching Grant Funds. ³ Excludes cooperative agreements and interagency agreements. ⁴ Includes obligations for new grants, supplemental awards on previous years' grants, cooperative agreements, and interagency agreements. ⁵ Beginning with 1997 data, the grantmaking structure changed from discipline-based categories to thematic ones. ⁶ Represents federal funds obligated only upon receipt or certification by endowment of matching nonfederal gifts. ⁷ Program designed to stimulate new sources and higher levels of giving to institutions for the purpose of guaranteeing long-term stability and financial independence. Program usually requires a match of at least 3 private dollars to each federal dollar. Funds for challenge grants are not allocated by program area because they are awarded on a grant-by-grant basis.

¹ Financial data are those associated with the National Park System. Certain other functions of the National Park Service (principally the activities absorbed from the former Heritage Conservation and Recreation Service in 1981) are excluded.
² Includes funds carried over from prior years. ³ For calendar year. Includes other areas, not shown separately. ⁴ For 1990, combined data for North Cascades National Park and two adjacent National Recreation Areas are included in National Parks total. ⁵ Includes military areas. ⁶ Federal land only, as of Dec. 31. Federal land acreages, in addition to National Park Service administered lands, also include lands within national park system area boundaries but under the administration of other agencies. Year-to-year changes in the federal lands figures includes changes in the acreages of these other lands and hence often differ from "net acquisition." ⁷ The decrease in the 2006 land total reflects corrected acreage by the Bureau of Land Management, not by the National Park Service lands.

National seashores	15,909,135	595,014	403,240	14,890	61,226	106,131	9,527
National parkways	30,165,232	177,340	158,204	8,530	125	294	10,187

¹ Recreation visit represents the entry of a person onto lands or waters administered by the National Park Service (NPS) for recreational purposes excluding government personnel, through traffic (commuters), trades—persons, and persons residing within park boundaries. ² Fee represents complete Federal ownership of all rights in the land. ³ Represents Federal ownership of some rights in the land. ⁴ NPS acreage lies under the jurisdiction of another federal agency (such as Bureau of Land Management). ⁵ Includes other "type of areas" not shown separately.

Accommodation, Food Services, and Other Services

This section presents statistics relating to services other than those covered in the previous few sections (22 to 26) on wholesale and retail trade, transportation, communications, financial services, and recreation services. Data shown for services are classified by kind of business and cover sales or receipts, establishments, employees, payrolls, and other items. The principal sources of these data are from the Census Bureau and include the *2007 Economic Census*, annual surveys, and the *County Business Patterns* program. These data are supplemented by data from several sources such as the National Restaurant Association on food and drink sales (Table 1247), the American Hotel & Lodging Association on lodging (Table 1246), and Universal McCann on advertising (Table 1243).

Data on these services also appear in several other sections. For instance, labor force employment and earnings data appear in Section 12, Labor Force, Employment, and Earnings; gross domestic product of the industry (Table 654) appears in Section 13, Income, Expenditures, Poverty, and Wealth; and financial data (several tables) from the quarterly *Statistics of Income Bulletin*, published by the Internal Revenue Service, appear in Section 15, Business Enterprise.

Censuses—Limited coverage of the service industries started in 1933. Beginning with the 1967 census, legislation provides for a census of each area to be conducted every 5 years (for years ending in “2” and “7”). For more information on the most current census, see the *Economic Census, Guide to Economic Census*, found at <<http://www.census.gov/econ/census/guide/index.html>>. The industries covered in the censuses and surveys

of business are defined in the *North American Industry Classification System* (NAICS). For information on NAICS, see the Census Web site at <<http://www.census.gov/epcd/www/naics.html>>.

In general, the 2007 Economic Census has two final series of publications for these sectors: 1) subject series with reports such as product lines, and establishment and firm sizes and 2) geographic reports with individual reports for each state. For information on these series, see the Census Bureau Web site at <<http://www.census.gov/econ/census07>>.

Current surveys—The Service Annual Survey provides annual estimates of nationwide receipts for selected personal, business, leasing and repair, amusement and entertainment, social and health, and other professional service industries in the United States. For selected social, health, and other professional service industries, separate estimates are developed for receipts of taxable firms and revenue and expenses for firms and organizations exempt from federal income taxes. Several service sectors from this survey are covered in other sections of this publication. The estimates for tax exempt firms in these industries are derived from a sample of employer firms only. Estimates obtained from annual and monthly surveys are based on sample data and are not expected to agree exactly with results that would be obtained from a complete census of all establishments. Data include estimates for sampling units not reporting.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Table 1236. **Selected Service-Related Industries—Establishments, Sales, Payroll, and Employees by Kind of Business: 2007**

Foreign Commerce and Aid

This section presents data on the flow of goods, services, and capital between the United States and other countries; changes in official reserve assets of the United States; international investments; and foreign assistance programs.

The Bureau of Economic Analysis publishes current figures on U.S. international transactions and the U.S. international investment position in its monthly *Survey of Current Business*. Statistics for the foreign aid programs are presented by the Agency for International Development (AID) in its annual *U.S. Overseas Loans and Grants and Assistance from International Organizations*.

The principal source of merchandise import and export data is the U.S. Census Bureau. Current data are presented monthly in *U.S. International Trade in Goods and Services* report Series FT 900. The *Guide to Foreign Trade Statistics*, found on the Census Bureau Web site at <<http://www.census.gov/foreign-trade/guide/index.html>>, lists the Bureau's monthly and annual products and services in this field. In addition, the International Trade Administration and the Bureau of Economic Analysis present summary as well as selected commodity and country data for U.S. foreign trade on their Web sites: <<http://ita.doc.gov/td/industry/otea/>> and <<http://www.bea.gov/international/index>>, respectively. The merchandise trade data published by the Bureau of Economic Analysis in the *Survey of Current Business* and on the Web include balance of payments adjustments to the Census Bureau data. The U.S. Treasury Department's *Monthly Treasury Statement of Receipts and Outlays of the United States Government* contains information on import duties. The International Trade Commission, U.S. Department of Agriculture (agricultural products), U.S. Department of Energy (mineral fuels, like petroleum and coal), and the U.S. Geological Survey (minerals) release various reports and specialized products on U.S. trade.

International accounts—The international transactions tables (Tables 1246 to 1248) show, for given time periods, the transfer of goods, services, grants, and financial assets and liabilities between the United States and the rest of the world. The international investment position table (Table 1253) presents, for specific dates, the value of U.S. investments abroad and of foreign investments in the United States. The movement of foreign and U.S. capital as presented in the balance of payments is not the only factor affecting the total value of foreign investments. Among the other factors are changes in the valuation of assets or liabilities, including changes in prices of securities, defaults, expropriations, and write-offs.

Direct investment abroad means the ownership or control, directly or indirectly, by one person of 10 percent or more of the voting securities of an incorporated business enterprise or an equivalent interest in an unincorporated business enterprise. Direct investment position is the value of U.S. parents' claims on the equity of and receivables due from foreign affiliates, less foreign affiliates' receivables due from their U.S. parents. Income consists of parents' shares in the earnings of their affiliates plus net interest received by parents on intercompany accounts, less withholding taxes on dividends and interest.

Foreign aid—Foreign assistance is divided into three major categories—grants (military supplies and services and other grants), credits, and other assistance (through net accumulation of foreign currency claims from the sale of agricultural commodities). *Grants* are transfers for which no payment is expected (other than a limited percentage of the foreign currency “counterpart” funds generated by the grant), or which at most involve an obligation on the part of the receiver to extend aid to the United States or other countries to achieve a

common objective. *Credits* are loan disbursements or transfers under other agreements which give rise to specific obligations to repay, over a period of years, usually with interest. All known returns to the U.S. government stemming from grants and credits (reverse grants, returns of grants, and payments of principal) are taken into account in net grants and net credits, but no allowance is made for interest or commissions. *Other assistance* represents the transfer of U.S. farm products in exchange for foreign currencies (plus, since enactment of Public Law 87-128, currency claims from principal and interest collected on credits extended under the farm products program), less the government's disbursements of the currencies as grants, credits, or for purchases. The net acquisition of currencies represents net transfers of resources to foreign countries under the agricultural programs, in addition to those classified as grants or credits.

In 1952, economic, technical, and military aid programs were combined under the Mutual Security Act, which in turn was followed by the Foreign Assistance Act passed in 1961. Appropriations to provide military assistance were also made in the Department of Defense Appropriation Act (rather than the Foreign Assistance Appropriation Act) beginning in 1966 for certain countries in Southeast Asia and in other legislation concerning programs for specific countries (such as Israel). Figures on activity under the Foreign Assistance Act as reported in the *Foreign Grants and Credits* series differ from data published by AID or its immediate predecessors, due largely to differences in reporting, timing, and treatment of particular items.

Exports—The Census Bureau compiles export data primarily from Shipper's Export Declarations required to be filed with customs officials for shipments leaving the United States. They include U.S. exports under mutual security programs and exclude shipments to U.S. Armed Forces for their own use.

The value reported in the export statistics is generally equivalent to a free alongside ship (f.a.s.) value at the U.S. port of export, based on the transaction price, including inland freight, insurance, and

other charges incurred in placing the merchandise alongside the carrier at the U.S. port of exportation. This value, as defined, excludes the cost of loading merchandise aboard the exporting carrier and also excludes freight, insurance, and any other charges or transportation and other costs beyond the U.S. port of exportation. The country of destination is defined as the country of ultimate destination or country where the merchandise is to be consumed, further processed, or manufactured, as known to the shipper at the time of exportation. When ultimate destination is not known, the shipment is statistically credited to the last country to which the shipper knows the merchandise will be shipped in the same form as exported.

Effective January 1990, the United States began substituting Canadian import statistics for U.S. exports to Canada. As a result of the data exchange between the United States and Canada, the United States has adopted the Canadian import exemption level for its export statistics based on shipments to Canada.

Data are estimated for shipments valued under \$2,501 to all countries, except Canada, using factors based on the ratios of low-valued shipments to individual country totals.

Prior to 1989, exports were based on Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States. Beginning in 1989, Schedule B classifications are based on the Harmonized System and coincide with the Standard International Trade Classification, Revision 3. This revision will affect the comparability of most export series beginning with the 1989 data for commodities.

Imports—The Census Bureau compiles import data from various customs forms required to be filed with customs officials. Data on import values are presented on two valuations bases in this section: The c.i.f. (cost, insurance, and freight) and the customs import value (as appraised by the U.S. Customs Service in accordance with legal requirements of the Tariff Act of 1930, as amended). This latter valuation, primarily used for collection of

import duties, frequently does not reflect the actual transaction value. Country of origin is defined as country where the merchandise was grown, mined, or manufactured. If country of origin is unknown, country of shipment is reported.

Imports are classified either as "General imports" or "Imports for consumption." *General imports* are a combination of entries for immediate consumption, entries into customs bonded warehouses, and entries into U.S. Foreign Trade Zones, thus generally reflecting total arrivals of merchandise. *Imports for consumption* are a combination of entries for immediate consumption, withdrawals from warehouses for consumption, and entries of merchandise into U.S. customs territory from U.S. Foreign Trade Zones, thus generally reflecting the total of the commodities entered into U.S. consumption channels.

Beginning in 1989, import statistics are based on the Harmonized Tariff Schedule

of the United States, which coincides with import Standard International Trade Classification, Revision 3. This revision will affect the comparability of most import series beginning with the 1989 data.

Area coverage—Except as noted, the geographic area covered by the export and import trade statistics is the United States Customs area (includes the 50 states, the District of Columbia, and Puerto Rico), the U.S. Virgin Islands (effective January 1981), and U.S. Foreign Trade Zones (effective July 1982). Data for selected tables and total values for 1980 have been revised to reflect the U.S. Virgin Islands' trade with foreign countries, where possible.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Table 1250. U.S. International Transactions by Type of Transaction: 1990 to 2008

[In millions of dollars (706,975 represents \$706,975,000,000). Minus sign (–) indicates debits. N.i.e. = Not included elsewhere]

NA Not available. ¹ Excludes exports of goods under U.S. military agency sales contracts identified in census export documents, excludes imports of goods under direct defense expenditures identified in census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of census statistics to balance of payments basis. ² Includes some goods: Mainly military equipment; major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies; and fuels purchased by airline and steamship operators. ³ Includes transfers of goods and services under U.S. military grant programs. ⁴ These lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents. ⁵ The "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. government. ⁶ Includes sales of foreign obligations to foreigners. ⁷ Conceptually, "Balance on current account" is equal to "net foreign investment" in the national income and product accounts (NIPAs). However, the foreign transactions account in the NIPAs (a) includes adjustments to the international transactions accounts for the treatment of gold; (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico; and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans.

Table 1258. **U.S. Businesses Acquired or Established by Foreign Direct Investors—Investment Outlays by Industry of U.S. Business Enterprise and Country of Ultimate Beneficial Owner: 2000 to 2008**

[In millions of dollars (335,629 represents \$335,629,000,000). Foreign direct investment is the ownership or control directly or indirectly, by one foreign individual branch, partnership, association, trust, corporation, or government of 10 percent or more of the voting securities of a U.S. business enterprise or an equivalent interest in an unincorporated one. Data represent number and full cost of acquisitions of existing U.S. business enterprises, including business segments or operating units of existing U.S. business enterprises and establishments of new enterprises. Investments may be made by the foreign direct investor itself, or indirectly by an existing U.S. affiliate of the foreign direct investor. Covers investments in U.S. business enterprises with assets of over \$1 million, or ownership of 200 acres of U.S. land]

Table 1260. **U.S. Direct Investment Position Abroad on a Historical-Cost Basis by Selected Country: 2000 to 2008**

[In millions of dollars (1,316,247 represents \$1,316,247,000,000). U.S. investment abroad is the ownership or control by one U.S. person of 10 percent or more of the voting securities of an incorporated foreign business enterprise or an equivalent interest in an unincorporated foreign business enterprise. Negative position can occur when a U.S. parent company's liabilities to the foreign affiliate are greater than its equity in and loans to the foreign affiliate]

- Represents or rounds to zero. Z Less than 5000,000. ¹ In recent years, significant amounts of foreign assistance has been reported on a regional, inter-regional, and worldwide basis. Country totals in this table may understate actual assistance to many countries. ² Includes European Atomic Energy Community, European Coal and Steel Community, European Payments Union, European Productivity Agency, North Atlantic Treaty Organization, and Organization for European Economic Cooperation. ³ In 1992, some successor countries assumed portions of outstanding credits of the former Yugoslavia (assignment of the remaining portions is pending). Subsequent negative totals reflect payments to the United States on these assumed credits which were greater than the extension of new credits and grants to these countries. ⁴ United Nations Relief and Works Agency for Palestine refugees. ⁵ See footnote 5, Table 1296. ⁶ Excludes transactions with Commonwealth of the Northern Mariana Islands after October 1986; includes transactions with Federated States of Micronesia, Republic of the Marshall Islands, and Republic of Palau. ⁷ Includes transfer of Panama Canal to the Republic of Panama on Dec. 1999. ⁸ Includes Andean Development Corporation, Caribbean Development Bank, Central American Bank for Economic Integration, Eastern Caribbean Central Bank, Inter-American Institute of Agricultural Science, Organizations of American States, and Pan American Health Organization. ⁹ Foreign assistance to Iraq in 1991-96 was direct humanitarian assistance to ethnic minorities of Northern Iraq after the conflict in the Persian Gulf. Foreign assistance to Iraq in 2003, 2004, 2005, 2006 and 2007 includes Iraq Reconstruction and humanitarian assistance.

Table 1271. U.S. Exports, Imports, and Merchandise Trade Balance by Country: 2004 to 2008

[In millions of dollars (814,875 represents \$814,875,000,000). Includes silver ore and bullion. Country totals include exports of special category commodities, if any. Data include nonmonetary gold and include trade of Virgin Islands with foreign countries. For methodology, see Foreign Trade Statistics in Appendix III. Minus sign (-) denotes an excess of imports over exports]

Table 1275. U.S. Exporting Companies Profile by Employment-Size Class: 2000 and 2007

[(668,310 represents \$668,310,000,000). Based on data from export trade documents and the Business Register. For information on data limitations, see the Technical Documentation in the source]

Employment-size class	Number of exporters		Known export value ¹ (mil. dol.)		Percent of—			
					Number of exporters		Known export value	
	2000	2007	2000	2007	2000	2007	2000	2007
All companies, total	246,452	266,457	668,310	1,031,007	100.0	100.0	100.0	100.0
No employees	74,772	85,229	47,024	74,891	30.3	32.0	7.0	7.3
1 to 19 employees	96,268	107,550	45,272	71,248	39.1	40.4	6.8	6.9
20 to 49 employees	31,362	32,039	21,262	37,259	12.7	12.0	3.2	3.6
50 to 99 employees	16,988	16,815	19,711	32,897	6.9	6.3	2.9	3.2
100 to 249 employees	13,685	12,806	32,192	53,882	5.6	4.8	4.8	5.2
250 to 499 employees	5,454	4,942	27,397	41,507	2.2	1.9	4.1	4.0
500 or more employees	7,923	7,076	475,453	719,322	3.2	2.7	71.1	69.8

¹ Known value is defined as the value of exports by known exporters, i.e., those export transactions that could be matched to specific companies. Export values are on f.a.s. or “free alongside ship basis.”

Puerto Rico and the Island Areas

This section presents summary economic and social statistics for Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands. Primary sources are the decennial censuses of population and housing, county business patterns, and the Puerto Rico Community Survey conducted by the U.S. Census Bureau; the annual *Vital Statistics of the United States*, issued by the National Center for Health Statistics; and the annual *Income and Product* of the Puerto Rico Planning Board.

Jurisdiction—The United States gained jurisdiction over these areas as follows: the islands of *Puerto Rico* and *Guam*, surrendered by Spain to the United States in December 1898, were ceded to the United States by the Treaty of Paris, ratified in 1899. Puerto Rico became a commonwealth on July 25, 1952, thereby achieving a high degree of local autonomy under its own constitution. The *U.S. Virgin Islands*, comprising 50 islands and cays, was purchased by the United States from Denmark in 1917. *American Samoa*, a group of seven islands, was acquired by the United States in accordance with a convention among the United States, Great Britain, and Germany, ratified in 1900 (Swains Island was annexed in 1925). By an agreement approved by the Security Council and the United States, the Northern Mariana Islands, previously under Japanese mandate, was administered by the United States between 1947 and 1986 under the United Nations trusteeship system. The Northern Mariana Islands became a commonwealth in 1986.

Censuses—Because characteristics of the Puerto Rico and the Island Areas differ, the presentation of census data for them

is not uniform. The 1960 Census of Population covered all of the places listed above except the Northern Mariana Islands (their census was conducted in April 1958 by the Office of the High Commissioner), while the 1960 Census of Housing excluded American Samoa. The 1970, 1980, 1990, and 2000 Censuses of Population and Housing covered all five areas. Beginning in 1967, Congress authorized the economic censuses, to be taken at 5-year intervals, for years ending in “2” and “7.” Prior economic censuses were conducted in Puerto Rico for 1949, 1954, 1958, and 1963 and in Guam and the U.S. Virgin Islands for 1958 and 1963. In 1967, the census of construction industries was added for the first time in Puerto Rico; in 1972, the U.S. Virgin Islands and Guam were covered; and in 1982, the economic census was taken for the first time for the Northern Mariana Islands.

Puerto Rico Community Survey—The Puerto Rico Community Survey (PRCS) began in 2005 and is a critical element in the Census Bureau’s reengineered 2010 census plan. The American Community Survey is the equivalent of the PRCS for the United States (50 states, and District of Columbia). The PRCS collects and produces population and housing information every year instead of every 10 years. About 36,000 households are surveyed each year from across every municipio in Puerto Rico.

Information in other sections—In addition to the statistics presented in this section, other data are included as integral parts of many tables showing distribution by states in various sections of the *Abstract*. See “Puerto Rico and the Island Areas” in the Index. For definition and explanation of terms used, see Sections 1, 2, 4, 17, 20, 21, and 22.

Selected Island Areas of the United States

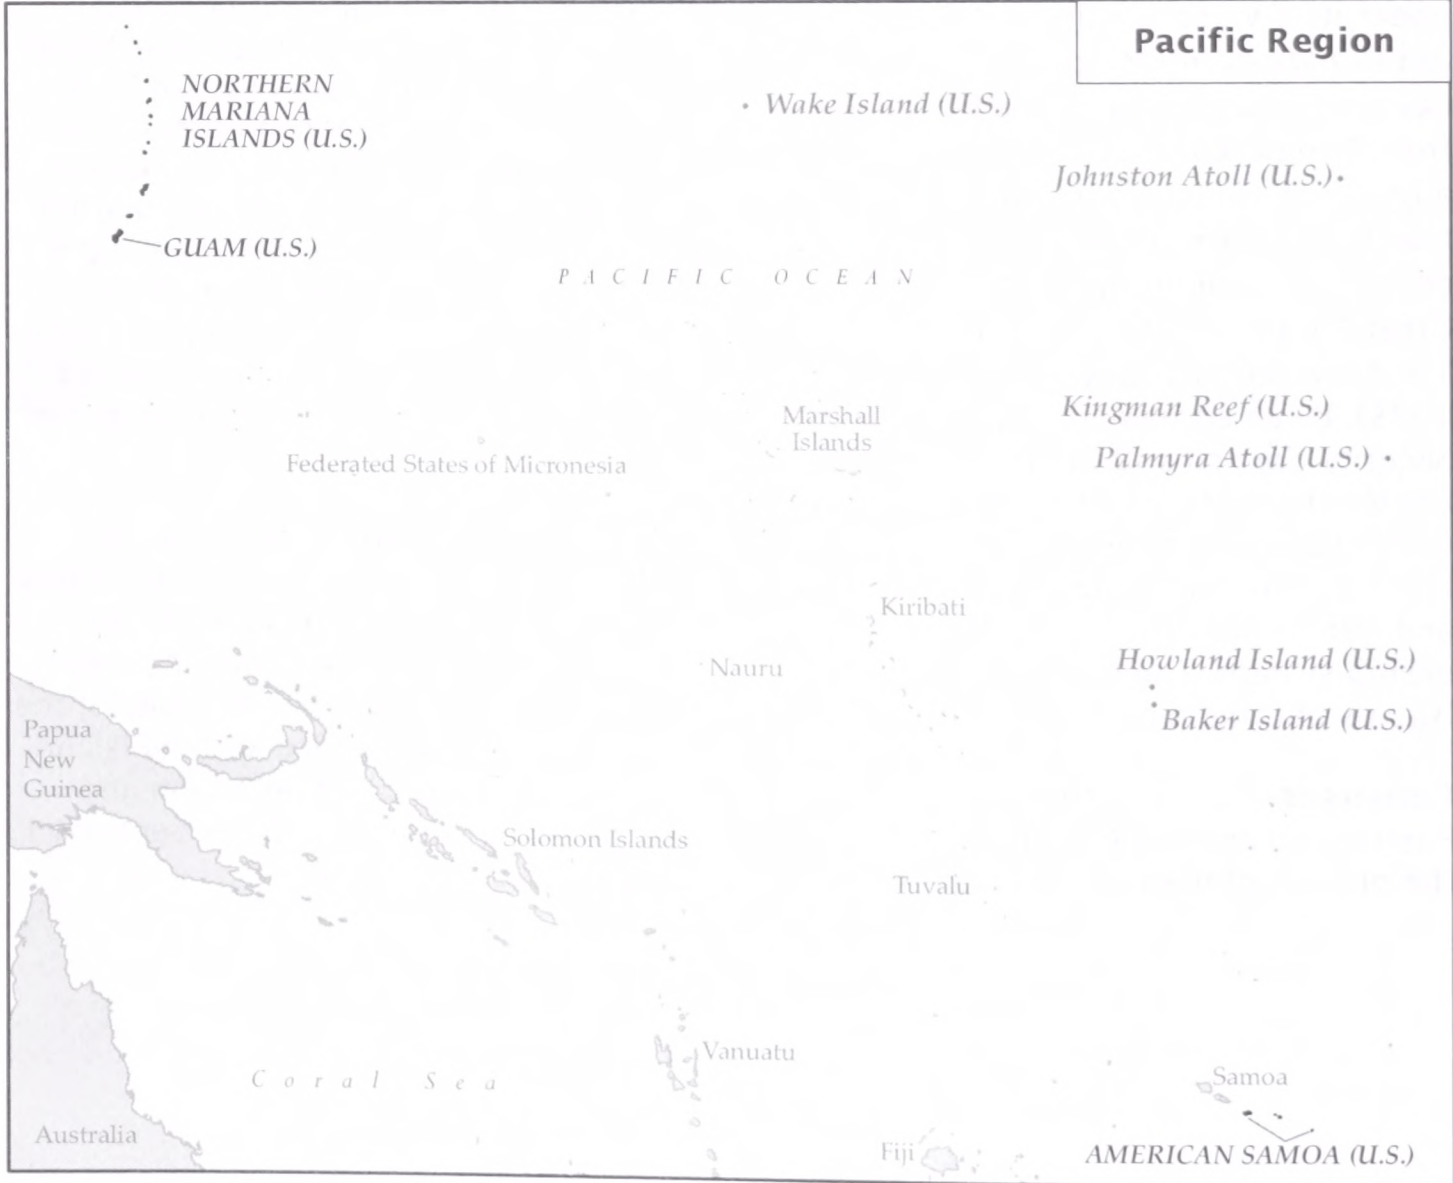

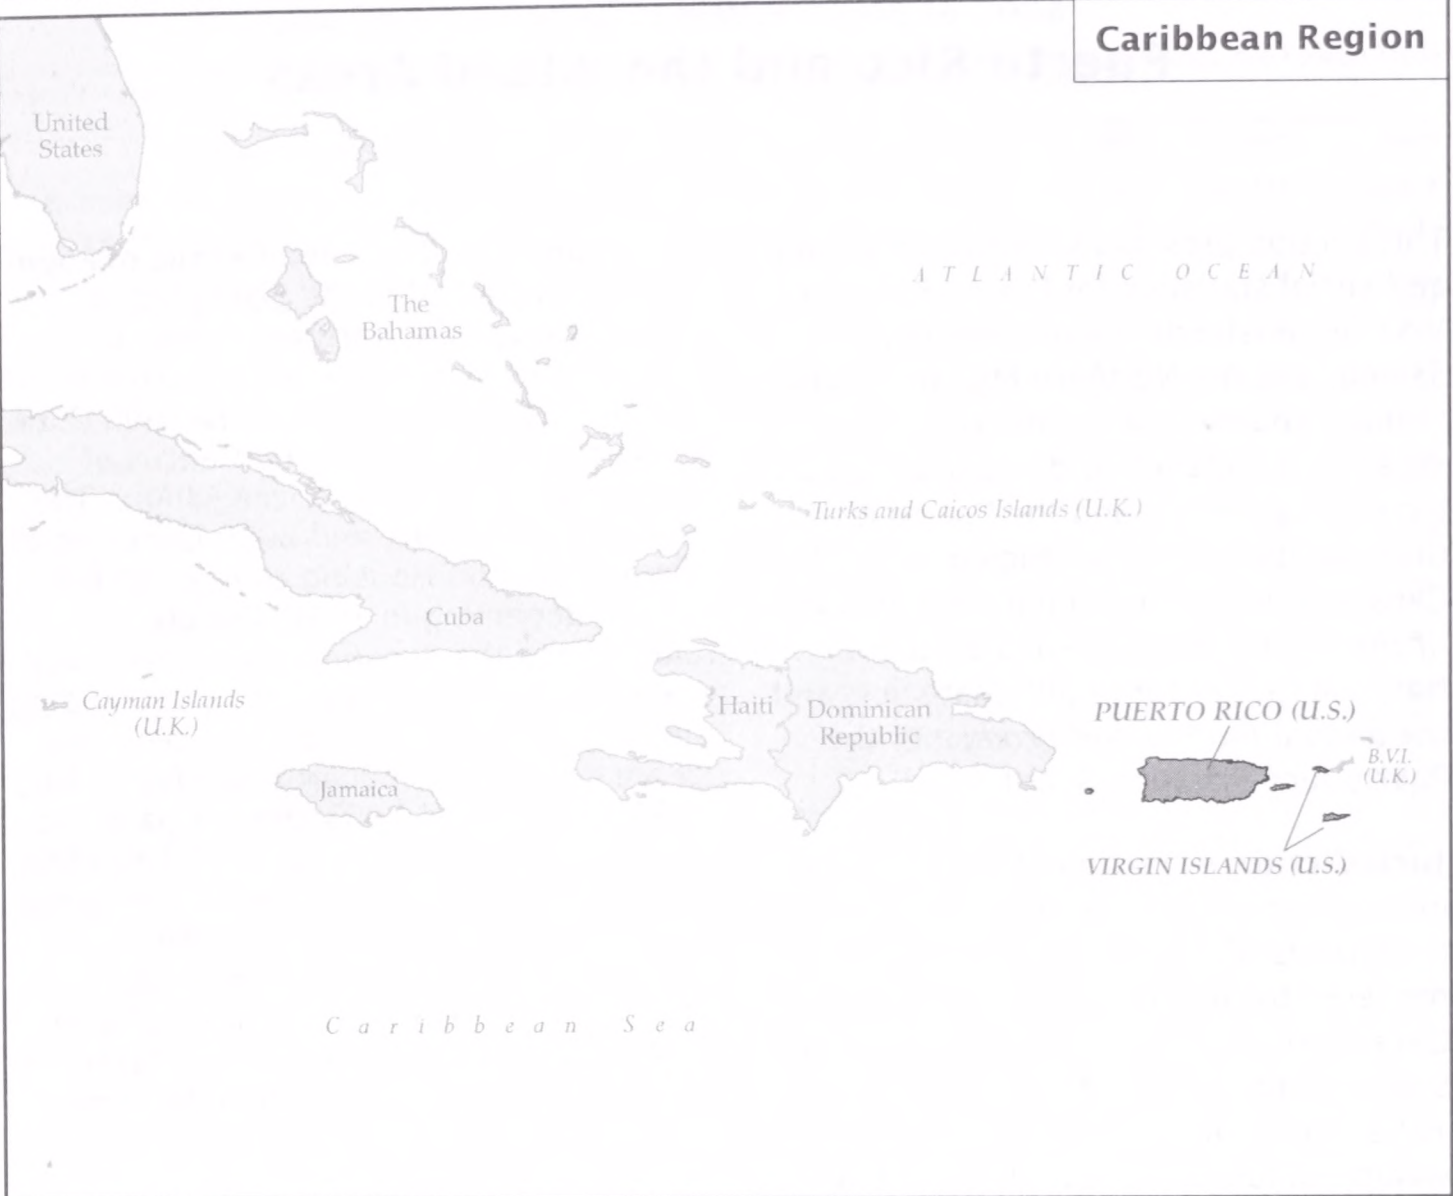

Table 1277. **Estimated Resident Population With Projections: 1990 to 2025**

[In thousands (3,537 represents 3,537,000). Population as of July 1. Population data generally are de-facto figures for the present territory. Data for 1990 to 2000 are adjusted to the 2000 Census of Population for Puerto Rico only. See text, Section 30, for general comments regarding the data. For details of methodology, coverage, and reliability, see source]

Section 30

International Statistics

This section presents statistics for the world as a whole and for many countries on a comparative basis with the United States. Data are shown for population, births and deaths, social and industrial indicators, finances, agriculture, communication, and military affairs.

Statistics of the individual nations may be found primarily in official national publications, generally in the form of yearbooks, issued by most of the nations at various intervals in their own national languages and expressed in their own or customary units of measure. (For a listing of selected publications, see Guide to Sources.) For handier reference, especially for international comparisons, the United Nations Statistics Division compiles data as submitted by member countries and issues a number of international summary publications, generally in English and French. Among these are the *Statistical Yearbook*; the *Demographic Yearbook*; *International Trade Statistics Yearbook*; *National Accounts Statistics: Main Aggregates and Detailed Tables*; *Population and Vital Statistics Reports* (quarterly); the *Monthly Bulletin of Statistics*; and the *Energy Statistics Yearbook*. Specialized agencies of the United Nations also issue international summary publications on agricultural, labor, health, and education statistics. Among these are the *Production Yearbook* and *Trade Yearbook* issued by the Food and Agriculture Organization, the *Yearbook of Labour Statistics* issued by the International Labour Office, *World Health Statistics* issued by the World Health Organization, and the *Statistical Yearbook* issued by the Educational, Scientific, and Cultural Organization.

The U.S. Census Bureau presents estimates and projections of basic demographic measures for countries and regions of the world in the *World Population Reports* (WP) series. The *International Population Reports* (Series IPC), and *International Briefs* (Series IB) also present population figures for many foreign

countries. Detailed population statistics are also available from the Census Bureau's International Data Base (<http://www.census.gov/ipc/www/idb/>).

The International Monetary Fund (IMF) and the Organization for Economic Cooperation and Development (OECD) also compile data on international statistics. The IMF publishes a series of reports relating to financial data. These include *International Financial Statistics*, *Direction of Trade*, and *Balance of Payments Yearbook*, published in English, French, and Spanish. The OECD publishes a vast number of statistical publications in various fields such as economics, health, and education. Among these are *OECD in Figures*, *Main Economic Indicators*, *Economic Outlook*, *National Accounts*, *Labour Force Statistics*, *OECD Health Data*, and *Education at a Glance*.

Statistical coverage, country names, and classifications—Problems of space and availability of data limit the number of countries and the extent of statistical coverage shown. The list of countries included and the spelling of country names are based almost entirely on the list of independent nations, dependencies, and areas of special sovereignty provided by the U.S. Department of State.

In recent years, several important changes took place in the status of the world's nations. In 1991, the Soviet Union broke up into 15 independent countries: Armenia, Azerbaijan, Belarus, Estonia, Georgia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan.

In the South Pacific, the Marshall Islands, Micronesia, and Palau gained full independence from the U.S. in 1991.

Following the breakup of the Socialist Federal Republic of Yugoslavia in 1992, the United States recognized Bosnia and Herzegovina, Croatia, Slovenia, and Macedonia as independent countries.

The Treaty of Maastricht created the European Union (EU) in 1992 with 12 member countries. The EU is not a state intended to replace existing states, but it is more than just an international organization. Its member states have set up common institutions to which they delegate some of their sovereignty so that decisions on specific matters of joint interest can be made democratically at a European level. This pooling of sovereignty is also called “European integration.” The EU has grown in size with successive waves of accessions in 1995, 2004, and 2007. The 27 current members of the EU are: Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, and the United Kingdom.

In 1992, the EU decided to establish economic and monetary union (EMU), with the introduction of a single European currency managed by a European Central Bank. The single currency—the euro—became a reality on January 1, 2002, when euro notes and coins replaced national currencies in 12 of the then 15 countries of the European Union (Belgium, Germany, Greece, Spain, France, Ireland, Italy, Luxembourg, the Netherlands, Austria, Portugal, and Finland). Since then, 12 countries have become members of the EU, but Slovakia, Slovenia, Malta, and Cyprus have been the only new members of the EU to adopt the euro as the national currency.

On January 1, 1993, Czechoslovakia was succeeded by two independent countries: the Czech Republic and Slovakia. Eritrea announced its independence from Ethiopia in April 1993 and was subsequently recognized as an independent nation by the United States. In May of 2002, Timor-Leste won independence from Indonesia.

Serbia and Montenegro, both former republics of Yugoslavia, became independent of one another on May 31, 2006. This separation is seen in the population estimates tables (Tables 1296, 1322, and 1367), but some tables still show both

countries as combined. On February 17, 2008, Kosovo declared its independence from Serbia, making it the world’s newest independent state.

The population estimates and projections used in Tables 1293–1296, 1298, and 1303 were prepared by the Census Bureau. For each country, the data on population, by age and sex, fertility, mortality, and international migration were evaluated and, where necessary, adjusted for inconsistencies and errors in the data. In most instances, comprehensive projections were made by the component method, resulting in distributions of the population by age and sex and requiring an assessment of probable future trends of fertility, mortality, and international migration.

Economic associations—The Organization for European Economic Co-Operation (OEEC), a regional grouping of Western European countries established in 1948 for the purpose of harmonizing national economic policies and conditions, was succeeded on September 30, 1961, by the Organization for Economic Cooperation and Development (OECD). The member nations of the OECD are Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, Slovakia, South Korea, Spain, Sweden, Switzerland, Turkey, the United Kingdom, and the United States.

Quality and comparability of the data—The quality and comparability of the data presented here are affected by a number of factors:

(1) The year for which data are presented may not be the same for all subjects for a particular country or for a given subject for different countries, though the data shown are the most recent available. All such variations have been noted. The data shown are for calendar years except as otherwise specified.

(2) The bases, methods of estimating, methods of data collection, extent of coverage, precision of definition, scope of territory, and margins of error may vary

for different items within a particular country, and for like items for different countries. Footnotes and headnotes to the tables give a few of the major time-periods and coverage qualifications attached to the figures; considerably more detail is presented in the source publications. Many of the measures shown are, at best, merely rough indicators of magnitude.

(3) Figures shown in this section for the United States may not always agree with figures shown in the preceding sections. Disagreements may be attributable to the use of differing original sources, a difference in the definition of geographic limits (the 50 states, conterminous United States only, or the United States including certain outlying areas and possessions), or to possible adjustments made in the United States' figures by other sources in order to make them more comparable with figures from other countries.

International comparisons of national accounts data—In order to compare national accounts data for different countries, it is necessary to convert each country's data into a common unit of currency, usually the U.S. dollar. The market exchange rates, which are often used in converting national currencies, do not necessarily reflect the relative purchasing power in the various countries. It is necessary that the goods and services produced in different countries be valued consistently if the differences observed are meant to reflect real differences in the volumes of goods and services produced. The use of purchasing power parities (see Tables 1312, 1313, and 1356) instead of exchange rates is intended to achieve this objective.

The method used to present the data shown in Table 1313 is to construct volume measures directly by revaluing the goods and services sold in different countries at a common set of international prices. By dividing the ratio of the gross domestic products of two countries expressed in their own national currencies by the corresponding ratio calculated at constant international prices, it is possible to derive the implied purchasing power parity (PPP) between the two currencies concerned. PPPs show how many

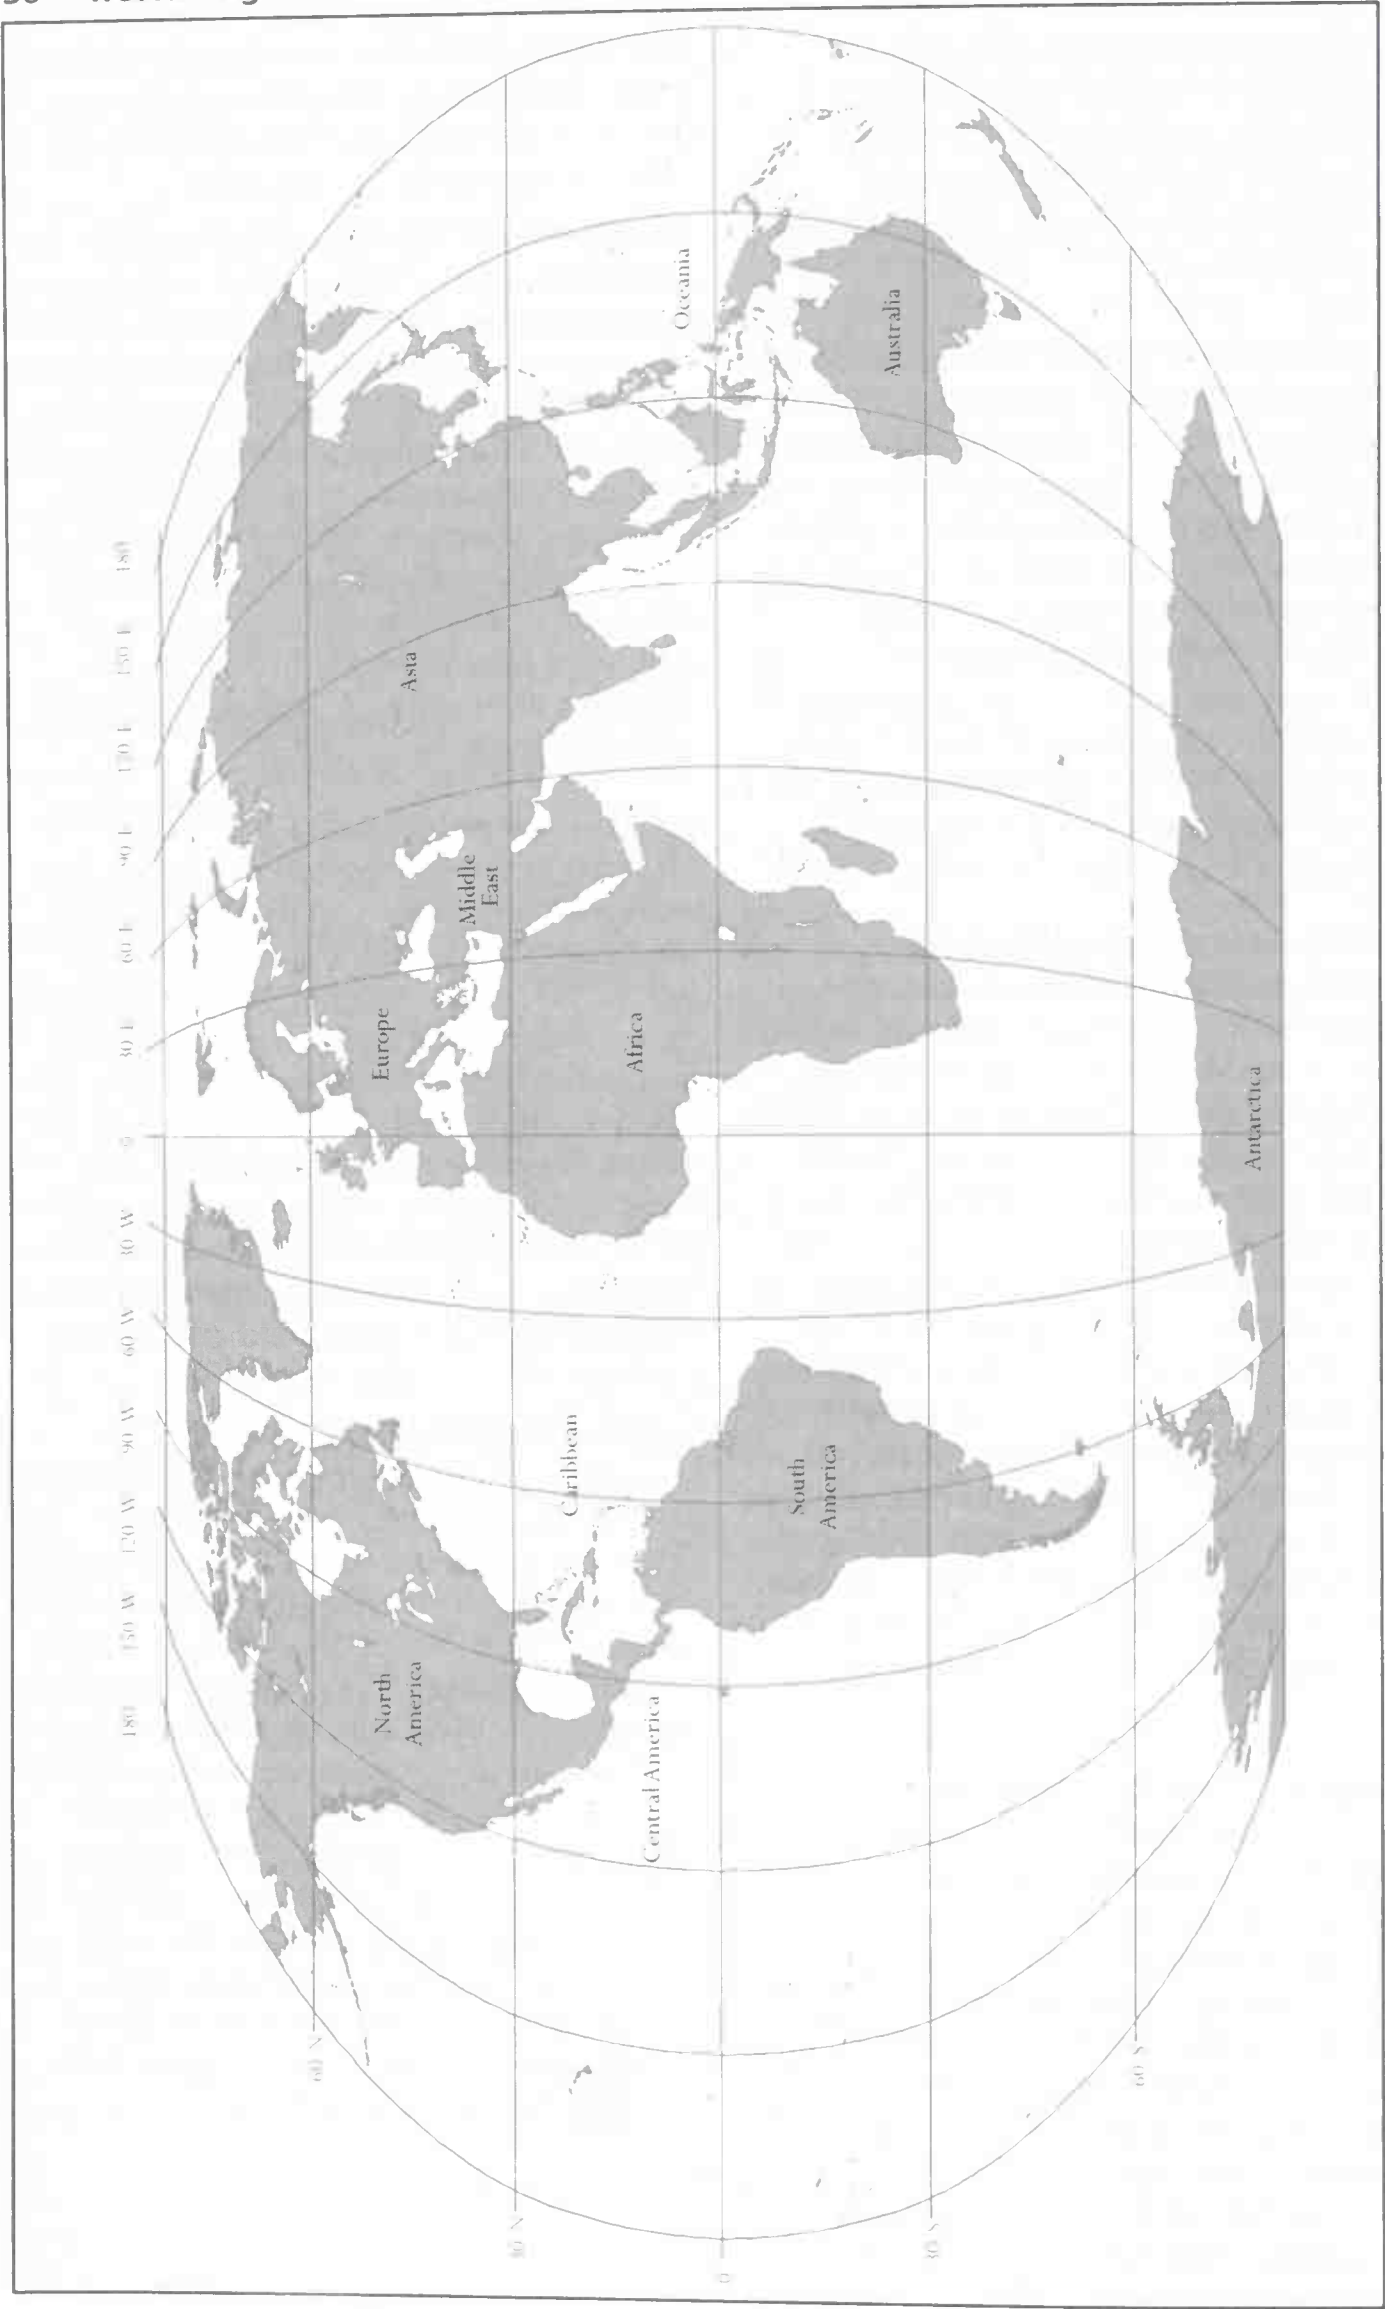

units of currency are needed in one country to buy the same amount of goods and services that one unit of currency will buy in the other country. For further information, see *National Accounts, Main Aggregates, Volume I*, issued annually by the Organisation for Economic Cooperation and Development, Paris, France.

International Standard Industrial Classification—The original version of the International Standard Industrial Classification of All Economic Activities (ISIC) was adopted in 1948. Wide use has been made both nationally and internationally in classifying data according to kind of economic activity in the fields of production, employment, national income, and other economic statistics. A number of countries have utilized the ISIC as the basis for devising their industrial classification scheme.

Substantial comparability has been attained between the industrial classifications of many other countries, including the United States and the ISIC by ensuring, as far as practicable, that the categories at detailed levels of classification in national schemes fitted into only one category of the ISIC. The United Nations, the International Labour Organization, the Food and Agriculture Organization, and other international bodies have utilized the ISIC in publishing and analyzing statistical data. Revisions of the ISIC were issued in 1958, 1968, and 1989.

International maps—A series of regional world maps is provided on pages 808–816. References are included in Table 1296 for easy location of individual countries on the maps. The Robinson map projection is used for this series of maps. A map projection is used to portray all or part of the round Earth on a flat surface, but this cannot be done without some distortion. For the Robinson projection, distortion is very low along the Equator and within 45 degrees of the center but is greatest near the poles. For additional information on map projections and maps, please contact the Earth Science Information Center, U.S. Geological Survey, 507 National Center, Reston, VA 22092.

¹ Estimates and projections for France now include the four overseas departments of French Guiana, Guadeloupe, Martinique, and Reunion in the national total. These areas will now be included in the same regions as France (Europe) and not in the regions where they were included in prior releases (French Guiana in South America, Guadeloupe and Martinique in North America, and Reunion in Africa). Saint Barthelemy and Saint Martin recently voted to become French overseas collectivities apart from Guadeloupe and are included in the totals for North America.

X Not applicable. ² Less than 0.05 percent or less than one person per square mile. ¹ See maps on pp. 808–816 for geographic locations. ² Computed by the exponential method. For explanation of average annual percent change, see Guide to Tabular Presentation. ³ Source: Central Intelligence Agency, "CIA World Factbook"; <<https://www.cia.gov/library/publications/the-world-factbook/index.html#>> (accessed 24 August 2009). (Data converted from square kilometers to square miles). ⁴ With the establishment of diplomatic relations with China on January 1, 1979, the U.S. government recognized the People's Republic of China as the sole legal government of China and acknowledged the Chinese position that there is only one China and that Taiwan is part of China. ⁵ "Congo" is the official short-form name for both the Republic of Congo and the Democratic Republic of the Congo. To distinguish one from the other the U.S. Dept. of State adds the capital in parentheses. This practice is unofficial and provisional. ⁶ Data for 1990 are for former West Germany and East Germany combined. ⁷ The Gaza Strip and West Bank are Israeli occupied with interim status subject to Israeli/Palestinian negotiations. The final status is yet to be determined. Source: Except as noted, U.S. Census Bureau, "International Data Base" (published June 2009); <<http://www.census.gov/ipc/www/idb/>>.

Table 1297. **Foreign or Foreign-Born Population, Labor Force, and Net Migration in Selected OECD Countries: 2000 and 2006**

[31,108 represents 31,108,000. In Australia and the United States the data refer to people present in the country who are foreign born. In the European countries and Japan they generally refer to foreigners and represent the nationalities of residents]

Country	Foreign population ¹				Foreign labor force ²				Average net migration 1990-2006 ³ (per 1,000 population)

NA Not available. ¹ Data are from population registers of foreigners except for France, Greece, Mexico, and Poland (census), Ireland and the United Kingdom (Labour Force Survey), Portugal (residence permits), Australia (inter- and post-censal estimates), and the United States (Current Population Survey). ² Includes unemployed except for Belgium, Greece, Norway, Luxembourg, Netherlands, and the United Kingdom. Germany, Luxembourg, and Netherlands include cross-border workers. Belgium and Italy include the self-employed. Data for Austria, Germany, and Luxembourg are from social security registers, and for Denmark, from the register of population. Data for Italy, Spain, and Switzerland are from residence or work permits. Figures for Japan and Netherlands are estimates. Data for other countries are from labor force surveys. ³ Or latest period available. ⁴ Children under 18 who are registered on their parents' permit are not counted. ⁵ Data are based on registered foreign nationals which include foreigners staying in Japan for more than 90 days. ⁶ Number of foreigners with a residence permit. Permits of short duration (less than 6 months) as well as students are excluded. ⁷ Number of foreigners with an annual residence permit or with a settlement permit (permanent permit). Seasonal and frontier workers are excluded. ⁸ Estimated from the annual labour force survey. Fluctuations from year to year may be due to sampling error.

Table 1301. Single-Parent Households: 1980 to 2008

[In thousands (6,061 represents 6,061,000), except for percent. For the United Kingdom in 1981, children are defined as those under 15 and those who are 15, 16, or 17 and attended school full-time; for later years, children are defined as those under 16 and those who are 16 or 17 and attend school full-time. For Ireland, children are defined as those under 15. For France, children are defined as those under 25. For Canada for 2001 onward and for Germany for 1995 onward, children are of all ages. For Germany in 1991 and for all other countries, except Denmark in 2008, children are defined as children living at home, or away at school, under 18. In Denmark in 2008, children are defined as those under 25. Data are generally for the entire year, but in some instances they are only for a particular month within the year]

NA Not available. ¹ May include unmarried cohabitating couples. Such couples are explicitly included under married couples in Canada, Denmark, Ireland, France, the Netherlands, Sweden, and the United Kingdom. In Germany, cohabitants are grouped with married couples beginning in 2000. In other countries, some unmarried cohabitants are included as married couples, while some are classified under "other households." ² Children are defined as unmarried children living at home according to the following age limits: under 18 years old in the United States, Canada (1981–96), Japan, Denmark (1980–2007), Sweden, and the United Kingdom, except that the United Kingdom includes 15-, 16-, and 17-year-olds in 1981 and 16- and 17-year-olds thereafter only if they are attending school full-time; under 25 years old in France and in Denmark in 2008; and children of all ages in Canada (2001 onward), Germany, Ireland, and the Netherlands. ³ Includes both family and nonfamily households not elsewhere classified. These households comprise, for example, siblings residing together, other households composed of relatives, and households made up of roommates. Some unmarried cohabitating couples may also be included in the "other" group. See footnote 1. ⁴ Break in series. ⁵ From family-based statistics. However, one person living alone constitutes a family in Denmark. In this respect, the Danish data are closer to household statistics. ⁶ Great Britain only (excludes Northern Ireland).

Table 1306. **Percentage of the Adult Population Considered to Be Obese: 2006**

[Obesity rates are defined as the percentage of the population with a Body Mass Index (BMI) over 30 kg/m². The BMI is a single number that evaluates an individual's weight status in relation to height (weight/height², with weight in kilograms and height in meters). For Australia, the United Kingdom, and the United States, figures are based on health examinations, rather than self-reported information. Obesity estimates derived from health examinations are generally higher and more reliable than those coming from self-reports because they preclude any misreporting of people's height and weight. However, health examinations are only conducted regularly in a few countries. For more information on methods by country, see <<http://www.irdes.fr/EspaceAnglais/home.html>>]

Table 1313. **Real GDP per Capita and per Employed Persons by Country: 1990 to 2007**

[U.S. figures based on the System of National Income and Product Accounts (NIPA) from the Bureau of Economic Analysis. All other countries, based on the 1993 United Nations System of National Accounts. Per capita data based on total resident population. Real GDP is a macroeconomic measure of the size of an economy adjusted for price changes and inflation. Employment data include people serving in the armed forces for some countries. Real dollars are calculated based on 2005 Purchasing Power Parities (PPPs). PPPs are currency conversion rates used to convert GDPs expressed in different currencies to a common value (U.S. dollars in this case). A PPP for a given country is the number of national currency units needed to buy the specific basket of goods and services that one dollar will buy in the United States. See text, this section]

Table 1315. Sectoral Contributions to Gross Value Added: 1996 and 2006

[In percent. According to the 1993 System of National Accounts (SNA) and the International Standard Industrial Classification (ISIC), Revision 3. Value added is estimated at basic prices and includes financial intermediation services indirectly measured (FISIM). It represents an industry's contribution to national GDP and is calculated as the difference between production and intermediate inputs. Value added comprises labor costs, consumption of fixed capital, indirect taxes less subsidies, and net operating surplus and mixed income]

– Represents or rounds to zero. ¹ Data prior to 1991 are for the former West Germany. ² In Canada, France, Sweden, and the United Kingdom, compensation adjusted for employment taxes and government subsidies to estimate the actual labor cost to employers. ³ 1996 = 100. Index of hourly compensation divided by the index of consumer prices to adjust for changes in purchasing power. ⁴ Indexes in national currency adjusted for changes in prevailing exchange rates.

Source: U.S. Bureau of Labor Statistics, *International Comparisons of Manufacturing Productivity and Unit Labor Cost Trends 2007, Supplementary Tables 1950–2007* (published 3 March 2009). See also <<http://www.bls.gov/ilc>>.

Table 1318. **Indexes of Hourly Compensation Costs for All Employees in Manufacturing by Country: 2000 to 2007**

[United States = 100. Compensation costs include pay for time worked, other direct pay (including holiday and vacation pay, bonuses, other direct payments, and the cost of pay in kind), employer expenditures for legally required insurance programs and contractual and private benefit plans, and for some countries, other labor taxes. Data adjusted for exchange rates. Area averages are trade-weighted to account for difference in countries' relative importance to U.S. trade in manufactured goods. The trade weights used to compute the average compensation cost measures for selected economic groups are based on the relative dollar value of U.S. trade in manufactured commodities (exports plus imports) with each country or area in 2007; see source for detail]

Table 1319. **Annual Percent Change in Labor Productivity and Hours Worked by Country: 1995 to 2008**

[Change for period shown. For OECD countries and Eastern Europe, labor productivity growth refers to the growth in gross domestic product per hour worked. Data are derived from an annual database maintained by the Groningen Growth and Development Centre at the University of Groningen, Netherlands, in association with The Conference Board. Growth for regional aggregates is calculated based on the sum of gross domestic product divided by the sum of total hours worked. Gross domestic product for each country was converted based on the 2005 OECD benchmark for purchasing power parities and updated to 2008 using the aggregate inflation rate for each country relative to U.S. inflation. Minus sign (–) indicates decrease]

Table 1321. Comparative Price Levels—Selected OECD Countries: 2009

[Purchasing power parities (PPPs) are the rates of currency conversion that eliminate the differences in price levels between countries. Comparative price levels are defined as the ratios of PPPs to exchange rates. The PPPs are given in national currency units per U.S. dollar. The table is to be read vertically. Each column shows the number of specified monetary units needed in each of the countries listed to buy the same representative basket of consumer goods and services. In each case the representative basket costs a hundred units in the country whose currency is specified. Example of data: An item that costs \$1.00 in the United States would cost \$1.36 (U.S. dollars) in Japan]

Table 1322. Indexes of Living Costs Abroad: 2009

[As of January 2009. Washington, DC=100. Indexes compare the costs in dollars of representative goods and services (excluding housing and education) purchased at the foreign location and the cost of comparable goods and services in the Washington, DC area. The indexes are computed for private American employees and exclude special advantages that may be available only to U.S. Government employees. The indexes are place-to-place comparisons at specific times and currency exchange rates. They cannot be used for measuring cost changes over time at a foreign location. Since the indexes reflect only the expenditure pattern and living costs of American families, they should not be used to compare living costs of Americans in the United States with the living costs of foreign nationals living in their own country]

NA Not available. ¹ Also called the "local index," the living cost index measures living costs for private American citizens. The local index is a comparison of prices at the foreign post and in Washington, DC, with the price ratios weight the expenditure pattern of American employees living at the foreign post. It is, thereby, a measure of the cost of living for Americans at the foreign post compared with the cost of living in Washington, DC. This is the index most appropriate for use by business firms and other private organizations to establish cost-of-living allowances for their American employees stationed abroad. ² See footnote 4, Table 1296. ³ See footnote 5, Table 1296. ⁴ There are no U.S. Government employees in Taiwan. The figures listed in this column represent a living cost comparison for American employees of the American Institute in Taiwan, who have some duty-free and other special benefits that may not be available to other Americans in Taiwan.

Table 1324. **Gross Public Debt, Expenditures, and Receipts by Country: 1990 to 2008**

[Percent of nominal gross domestic product. Gross debt includes one-off revenues from the sale of the mobile telephone licenses. Expenditures and receipts refer to the general government sector, which is a consolidation of accounts for the central, state, and local governments plus social security. Expenditures, or total outlays, are defined as current outlays plus capital outlays. Receipts cover current receipts, but exclude capital receipts. Nontax receipts consist of property income (including dividends and other transfers from public enterprises), fees, charges, sales, fines, capital transfers received by the general government, etc. Minus sign (–) indicates deficit]

Table 1333. **Educational Performance: 2006**

[Tertiary-type A includes education leading to a Bachelor's, Master's, or equivalent degree, and advanced research programs. Performance figures were gathered from the Program for International Student Assessment (PISA), an internationally standardized assessment jointly developed by participating countries, which takes place in 3-year cycles. To implement PISA, each of the participating countries selects a nationally representative sample of 15-year-olds, regardless of grade level. Tests are typically administered to between 4,500 and 10,000 students in each country]

Country	Student performance on the combined reading, scientific, and mathematical literacy scales			Educational attainment of adult population and current graduation rates (percent)	
	Mean score on the combined reading literacy scale ¹	Mean score on the mathematical literacy scale ²	Mean score on the scientific literacy scale ³	Upper secondary or higher attainment (25 to 64 years old) ⁴	Tertiary-type A attainment (25 to 64 years old) ⁵

Table 1341. World Production of Major Mineral Commodities: 1990 to 2007

[5,354 represents 5,354,000,000]

Commodity	Unit	1990	2000	2006	2007	Leading producers, 2006
MINERAL FUELS						
Coal	Mil. short tons	5,354	4,951	6,807	(NA)	China, ³ United States, India
Dry natural gas	Tril. cu. ft.	73.7	88.4	104.0	(NA)	Russia, United States, Canada
Natural gas plant liquids ¹	Mil. barrels ²	4,640	6,466	7,795	(NA)	United States, Saudi Arabia, Canada
Petroleum, crude	Mil. barrels ²	22,079	25,001	26,813	(NA)	Russia, Saudi Arabia, United States
NONMETALLIC MINERALS						
Cement, hydraulic	Mil. metric tons	1,160	1,600	2,600	2,770	China, ³ India, United States
Diamond, gem and industrial	Mil. carats	111	(NA)	174	169	Australia, Russia, Botswana
Nitrogen in ammonia	Mil. metric tons	97.5	109.0	126.0	131.0	China, ³ India, Russia
Phosphate rock, marketable	Mil. metric tons	162	133	142	156	China, ³ United States, Morocco and Western Sahara
Potash, marketable	Mil. metric tons	28.0	25.3	29.0	35.0	Canada, Russia, Belarus
Salt	Mil. metric tons	183	214	251	257	United States, China, ³ Germany
Sulfur, elemental basis	Mil. metric tons	58.0	57.2	66.0	68.0	Canada, United States, China ³
METALS						
Aluminum ⁴	Mil. metric tons	19.3	24.0	34.0	38.0	China, ³ Russia, Canada
Bauxite, gross weight	Mil. metric tons	113	135	190	199	Australia, China, ³ Brazil
Chromite, gross weight	1,000 metric tons . . .	13,200	14,400	19,000	21,500	South Africa, Kazakhstan, India
Copper, metal content ⁵	1,000 metric tons . . .	8,950	13,200	15,100	15,400	Chile, United States, Peru
Gold, metal content	Metric tons	2,180	2,550	2,460	2,380	South Africa, United States, Australia
Iron ore, gross weight ⁶	Mil. metric tons	983	1,060	1,800	2,000	China, ³ Brazil, Australia
Lead, metal content ⁵	1,000 metric tons . . .	3,370	3,100	3,650	3,770	China, ³ Australia, United States
Nickel, metal content ⁵	1,000 metric tons . . .	974	1,250	1,560	1,660	Russia, Canada, Australia
Tin, metal content ⁵	1,000 metric tons . . .	220	238	302	320	China, ³ Indonesia, Peru

NA Not available. ¹ Excludes China. ² 42-gallon barrels. ³ See footnote 4, Table 1296. ⁴ Unalloyed ingot metal. ⁵ Mine output. ⁶ Includes iron ore concentrates and iron ore agglomerates.

Table 1344. **World Energy Consumption by Region and Energy Source, 1990 to 2005, and Projections, 2010 to 2025**

[In quadrillion Btu (347.3 represents 347,300,000,000,000,000). Btu = British thermal units. For Btu conversion factors, see source. Energy totals include net imports of coal coke and electricity generated from biomass in the United States. Totals may not equal sum of components due to independent rounding. The electricity portion of the national consumption values consists of generation for domestic use plus an adjustment for electricity trade based on a fuel's share of total generation in the exporting country]

Iran	33.47	41.81	(NA)				

NA Not available. ¹ Fixed telephone lines refer to telephone lines connecting a customers terminal equipment (e.g. telephone set, facsimile machine) to the public switched telephone network (PSTN) and which have a dedicated port on a telephone exchange. Fixed telephone lines per 100 inhabitants is calculated by dividing the number of fixed telephone lines by the population and multiplying by 100. ² In many countries mainframe computers are used extensively, and thousands of users can be connected to a single mainframe computer; thus the number of PCs understates the total use of computers. ³ See footnote 4, Table 1296.

Table 1363. International Tourism Arrivals, Expenditures, and Receipts—Leading Countries—2000 to 2007

[Arrivals in thousands of nonresident tourists at national borders, except as noted (77,190 represents 77,190,000); expenditures and receipts in millions of dollars. Receipts are dollars spent by foreign tourists on travel inside the country shown. Expenditures are dollars visitors (same-day visitors and tourists) from a given country of origin spend on travel outside their country of residence. Excludes international transport receipts]

Table 1364. **Household Expenditure on Recreation and Culture as a Percentage of GDP: 1980 to 2007**

[Household expenditure on recreation and culture includes purchases of audio-visual, photographic, and computer equipment; CDs and DVDs; musical instruments; camper vans; caravans; sports equipment; toys; domestic pets and related products; gardening tools and plants; newspapers; tickets to sporting matches, cinemas, and theatres; and spending on gambling (including lottery tickets) less any winnings. It excludes expenditures on restaurants, hotels, and travel and holiday homes but includes package holidays]

NA Not available. ¹ See footnote 4, Table 1296. ² See footnote 5, Table 1296. ³ The debt of the former Soviet Union is included in Russia's data after 1990 on the assumption that 100 percent of all outstanding external debt as of December 1991 has become a liability of Russia. Beginning in 2000, the data for Russia has also been revised to include obligations to members of the former Council for Mutual Economic Assistance and other countries in the form of trade-related credits amounting to \$15.4 billion as of the end of 1996. ⁴ In June 2006, Serbia and Montenegro became separate countries (formerly Yugoslavia). Data for 2000 are for Serbia and Montenegro. Starting 2006, data excludes Montenegro. External debt obligations, excluding IBRD, IMF, and short-term, of Bosnia and Herzegovina before 2000 are included under Serbia and Montenegro. Data from 2000 onwards are estimates and also reflect borrowing by the former Yugoslavia that are not yet allocated to the successor republics.

Guide to Sources of Statistics, State Statistical Abstracts, and Foreign Statistical Abstracts

Alphabetically arranged, this guide contains references to important primary sources of statistical information for the United States and other countries. Secondary sources have been included if the information contained in them is presented in a particularly convenient form or if primary sources are not readily available. Nonrecurrent publications presenting compilations or estimates for years later than 2000, or types of data not available in regular series, are also included. Data are also available in press releases.

Valuable information may also be found in state reports, foreign statistical abstracts, which are included at the end of this appendix, and in reports for particular commodities, industries, or similar segments of our economic and social structures, many of which are not included here.

Publications listed under each subject are divided into two main groups: "U.S. Government" and "Nongovernment." The location of the publisher of each report is given except for federal agencies located in Washington, DC. Most federal publications may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC, tel. 202-512-1800, (Web site <<http://bookstore.gpo.gov>>). In some cases, federal publications may be obtained from the issuing agency.

Guide to State Statistical Abstracts

This bibliography includes the most recent statistical abstracts for states published since 2000, plus those that will be issued in late 2009. For some states, a near equivalent has been listed in substitution for, or in addition to, a statistical abstract. All sources contain statistical tables on a variety of subjects for the state as a whole, its component parts, or both. Internet sites also contain statistical data.

Alabama

University of Alabama, Center for Business and Economic Research, Box 870221, Tuscaloosa, AL 35487-0221. 205-348-6191. Fax: 205-348-2951. Internet site <<http://cber.cba.ua.edu/>>.

Alabama Economic Outlook, 2009.
Revised annually.

Alaska

Department of Commerce, Community, and Economic Development, State of Alaska, 550 West 7th Avenue, Suite 1770, Anchorage, AK 99501. 907-269-8100. Fax: 907-269-8125. Internet site <http://www.dced.state.ak.us/dca/misc_resources.htm>.

The Alaska Economic Performance Report, 2006. Online.

Arizona

University of Arizona Economic and Business Research Center, 1130 East Helen Street, McClelland Hall, Rm. 103, P.O. Box 210108, Tucson, AZ 85721-0108. 520-621-2155. Fax: 520-621-2150. Internet site <<http://www.ebr.eller.arizona.edu/>>.

Arizona Statistical Abstract, 2003.

Arizona's Economy. Quarterly online, Summer 2009.

Arizona Economic Indicators Databook, Fall 2008. Semiannual. Online.

Arkansas

University of Arkansas at Little Rock, Institute for Economic Advancement, College of Business, 2801 South University Avenue, Little Rock, AR 72204-1099. 501-569-8519. Fax: 501-569-8538. Internet site <<http://www.aiea.ualr.edu/default.html>>.

Arkansas State and County Economic Data, 2008. Annual.

Arkansas Personal Income Handbook, 2008.

Arkansas Statistical Abstract, 2008.
Revised biennially.

California

California Department of Finance, 915 L Street, Sacramento, CA 95814. 916-445-3878. Internet site <<http://www.dof.ca.gov/default.asp>>.

California Statistical Abstract, 2009.
Annual. Online only.

Colorado

University of Colorado at Boulder, Government Publications Library, University Libraries, 184 UCB, 1720 Pleasant Street, Boulder, CO 80309-0184. 303-492-8705. Internet site <<http://www.colorado.edu/libraries/govpubs/online.htm>>.

Colorado by the Numbers. Online only.

Colorado Office of Economic Development and International Trade, 1625 Broadway, Suite 2700, Denver, CO 80202. 303-892-3840. Fax: 303-892-3848.

Internet site <<http://www.state.co.us/oed/>>.

Colorado Data Book 2008-09.

Annual Abstract of Statistics. Annual. 2002. (In English.)

Metropolitan and Micropolitan Statistical Areas: Concepts, Components, and Population

The United States Office of Management and Budget (OMB) defines metropolitan and micropolitan statistical areas according to published standards that are applied to U.S. Census Bureau data. The general concept of a metropolitan or micropolitan statistical area is that of a core area containing a substantial population nucleus, together with adjacent communities having a high degree of economic and social integration with that core. Currently defined metropolitan and micropolitan statistical areas are based on application of 2000 standards (which appeared in the Federal Register on December 27, 2000) to 2000 decennial census data. Current metropolitan and micropolitan statistical area definitions were announced by OMB effective June 6, 2003, and subsequently updated as of December 2003, November 2004, December 2005, December 2006, November 2007, and November 2008.

Standard definitions of metropolitan areas were first issued in 1949 by the then Bureau of the Budget (predecessor of OMB), under the designation “standard metropolitan area” (SMA). The term was changed to “standard metropolitan statistical area” (SMSA) in 1959 and to “metropolitan statistical area” (MSA) in 1983. The term “metropolitan area” (MA) was adopted in 1990 and referred collectively to metropolitan statistical areas (MSAs), consolidated metropolitan statistical areas (CMSAs), and primary metropolitan statistical areas (PMSAs). The term “core-based statistical area” (CBSA) became effective in 2000 and refers collectively to metropolitan and micropolitan statistical areas.

OMB has been responsible for the official metropolitan areas since they were first defined, except for the period 1977 to 1981, when they were the responsibility of the Office of Federal Statistical Policy and Standards, U.S. Department of Commerce. The standards for defining metropolitan areas were modified in 1958, 1971, 1975, 1980, 1990, and 2000.

Defining Metropolitan and Micropolitan Statistical Areas—The 2000 standards provide that each CBSA must contain at least one urban area of 10,000 or more population. Each metropolitan statistical area must have at least one urbanized area of 50,000 or more inhabitants. Each micropolitan statistical area must have at least one urban cluster of at least 10,000 but less than 50,000 population.

Under the standards, the county (or counties) in which at least 50 percent of the population resides within urban areas of 10,000 or more population, or that contain at least 5,000 people residing within a single urban area of 10,000 or more population, is identified as a “central county” (counties). Additional “outlying counties” are included in the CBSA if they meet specified requirements of commuting to or from the central counties. Counties or equivalent entities form the geographic “building blocks” for metropolitan and micropolitan statistical areas throughout the United States and Puerto Rico.

If specified criteria are met, a metropolitan statistical area containing a single core with a population of 2.5 million or more may be subdivided to form smaller groupings of counties referred to as “metropolitan divisions.”

As of November 2008, there are 366 metropolitan statistical areas and 574 micropolitan statistical areas in the United States. In addition, there are eight metropolitan statistical areas and five micropolitan statistical areas in Puerto Rico.

Principal Cities and Metropolitan and Micropolitan Statistical Area Titles—

The largest city in each metropolitan or micropolitan statistical area is designated a “principal city.” Additional cities qualify if specified requirements are met concerning population size and employment. The title of each metropolitan or micropolitan statistical area consists of the names of up to three of its principal cities and the

name of each state into which the metropolitan or micropolitan statistical area extends. Titles of metropolitan divisions also typically are based on principal city names, but in certain cases consist of county names.

Defining New England City and Town Areas—In view of the importance of cities and towns in New England, the 2000 standards also provide for a set of geographic areas that are defined using cities and towns in the six New England states. The New England city and town areas (NECTAs) are defined using the same criteria as metropolitan and micropolitan statistical areas and are identified as either metropolitan or micropolitan, based, respectively, on the presence of either an urbanized area of 50,000 or more population or an urban cluster of at least 10,000 but less than 50,000 population. If the specified criteria are met, a NECTA containing a single core with a population of at least 2.5 million may be subdivided to form smaller groupings of cities and towns referred to as New England city and town area divisions.

Changes in Definitions Over Time—Changes in the definitions of these statistical areas since the 1950 census have consisted chiefly of (1) the recognition of new areas as they reached the minimum required city or urbanized area population and (2) the addition of counties (or cities and towns in New England) to existing areas as new decennial census data showed them to qualify.

In some instances, formerly separate areas have been merged, components of an area have been transferred from one area to another, or components have been dropped from an area. The large majority of changes have taken place on the basis of decennial census data. However, Census Bureau data serve as the basis for intercensal updates in specified circumstances.

Because of these historical changes in geographic definitions, users must be cautious in comparing data for these statistical areas from different dates. For some purposes, comparisons of data for areas as defined at given dates may be appropriate; for other purposes, it may be preferable to maintain consistent area definitions. Historical metropolitan area definitions are available for 1999, 1993, 1990, 1983, 1981, 1973, 1970, 1963, 1960, and 1950.

Excluding Tables 20 through 24 in the Population section; Table 581 in the Labor Force section; Table 667 in the Income section, and the tables that follow in this appendix, the tables presenting data for metropolitan areas in this edition of the *Statistical Abstract* are based on the 1999 or earlier metropolitan area definitions. For a list of component counties according to the 1999 definition, see Appendix II in the 2002 edition of the *Statistical Abstract* or <<http://www.census.gov/population/www/estimates/pastmetro.html>>.

Figure A1
Metropolitan and Micropolitan Statistical Areas of the United States
 As defined by the U.S. Office of Management and Budget, November 2007

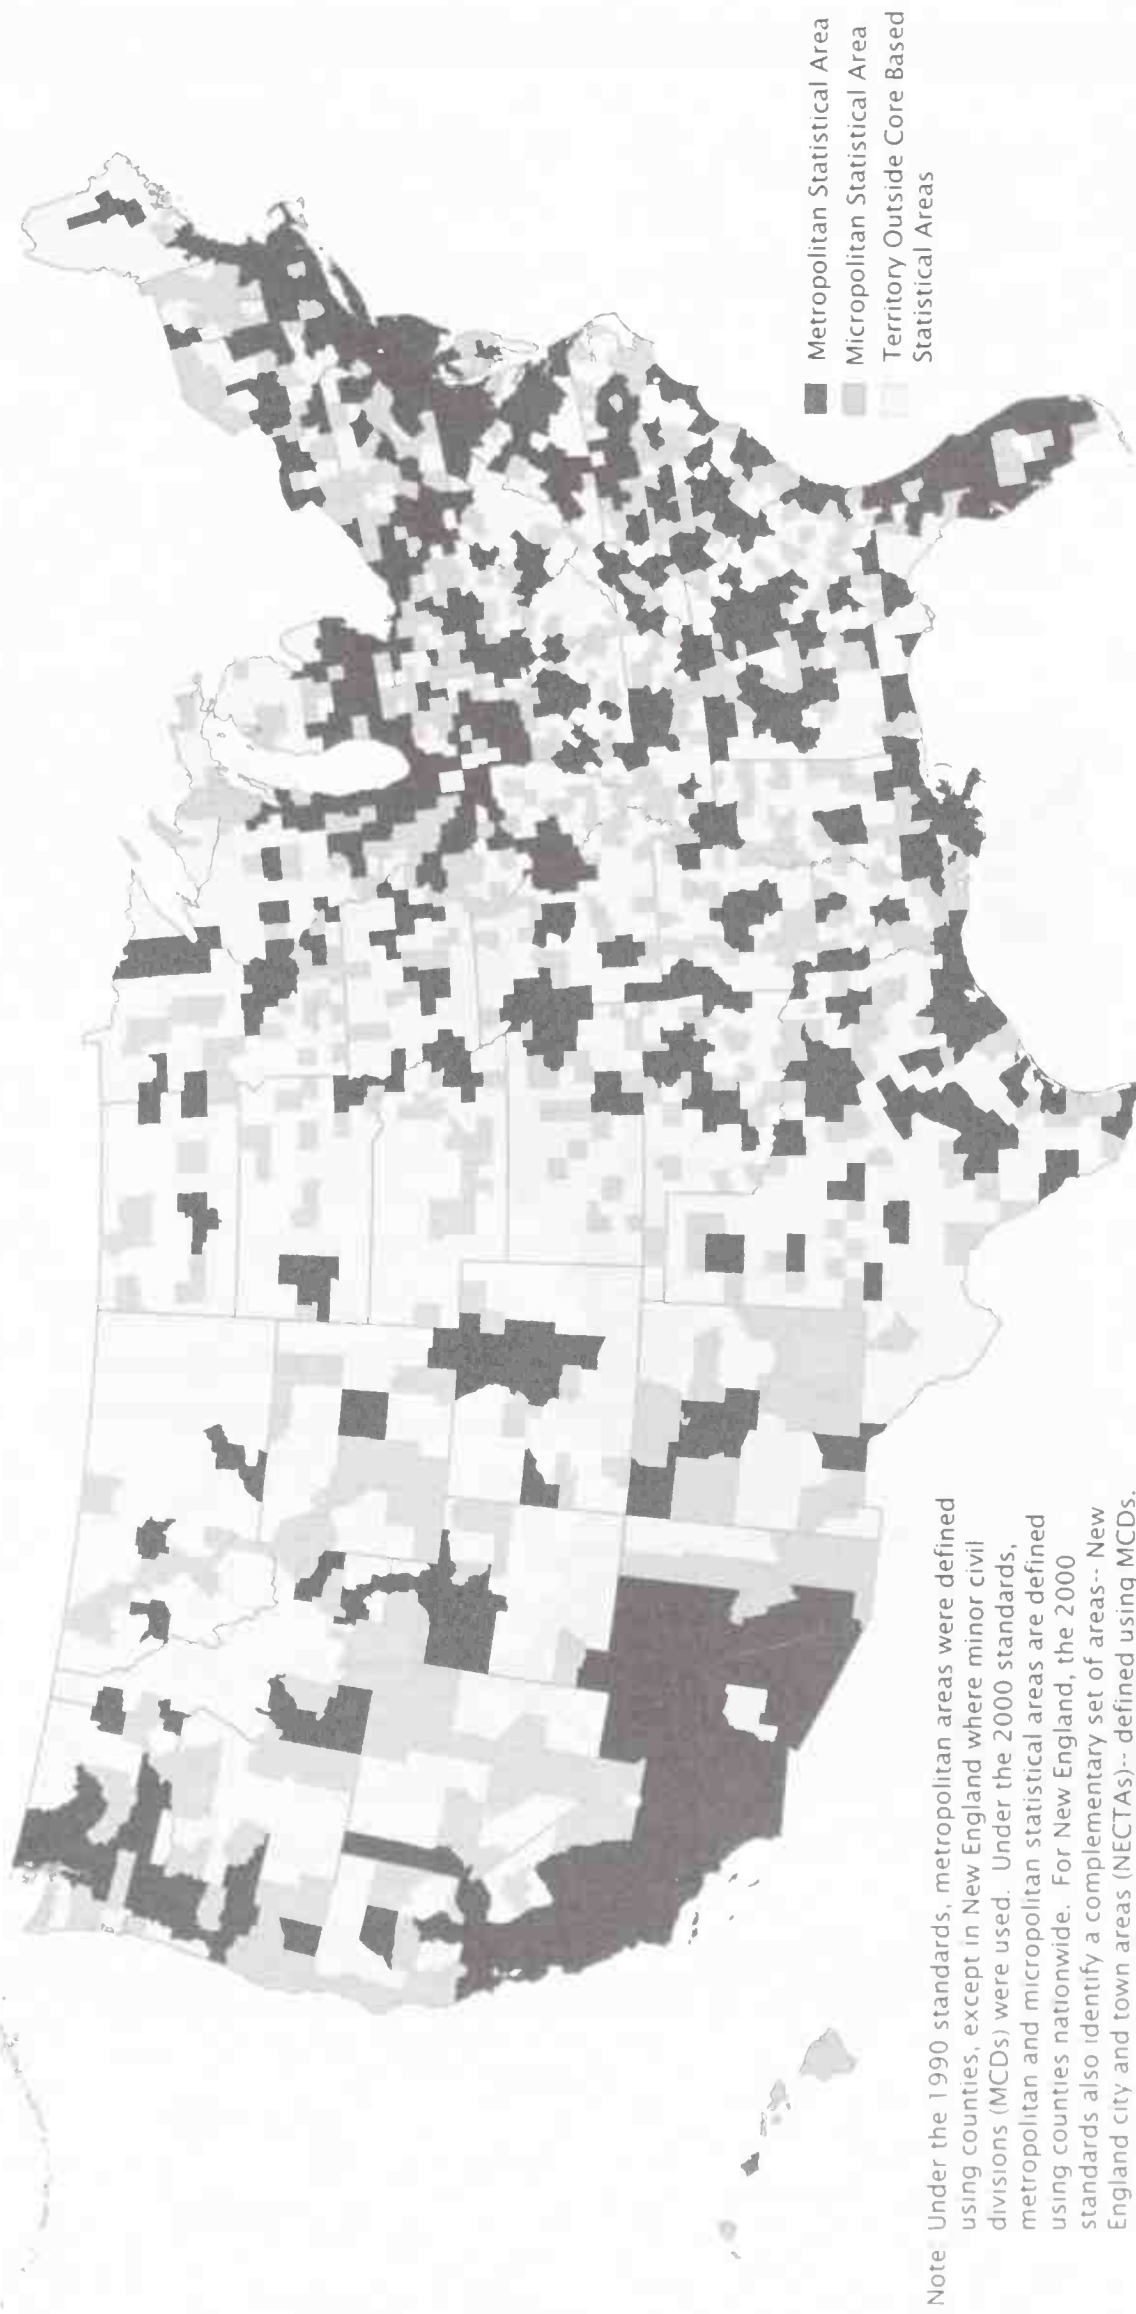

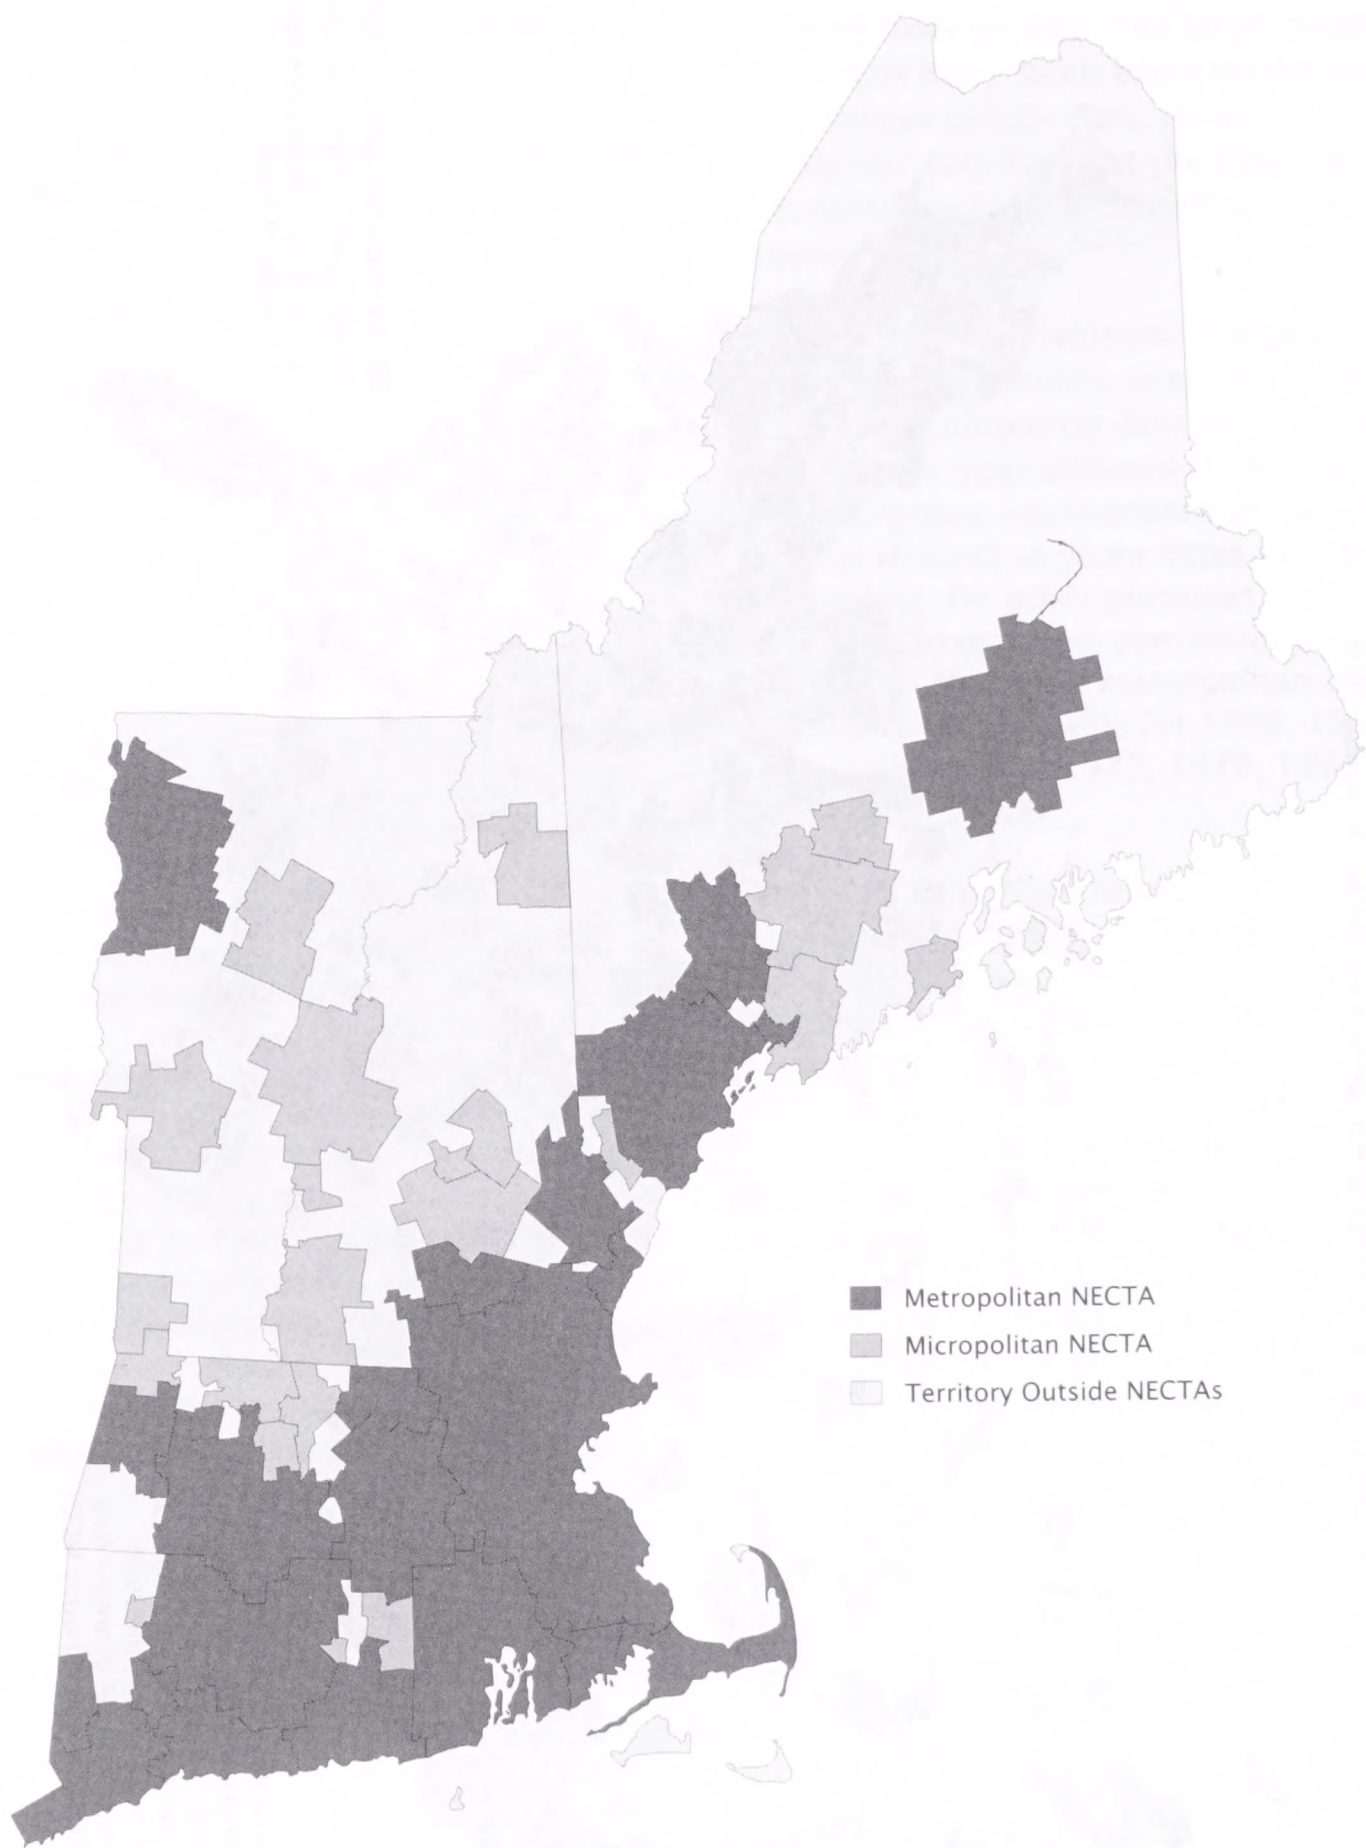

Figure A2
Metropolitan and Micropolitan New England City and Town Areas (NECTAs)
As defined by the U.S. Office of Management and Budget, November 2007

Note: Under the 2000 standards, metropolitan and micropolitan statistical areas are defined using counties nationwide. For New England, the 2000 standards also identify a complementary set of areas-- New England city and town areas (NECTAs) -- defined using MCDs.

Table A. **Metropolitan Statistical Areas and Components—
Population: 2008**

[Population as of July 2008. (160 represents 160,000). Metropolitan statistical areas as defined by the U.S. Office of Management and Budget as of November 2007. All geographic boundaries for 2008 population estimates are defined as of January 1, 2008. All metropolitan areas are arranged alphabetically]

Appendix III

Limitations of the Data

Introduction- The data presented in this *Statistical Abstract* came from many sources. The sources include not only federal statistical bureaus and other organizations that collect and issue statistics as their principal activity, but also governmental administrative and regulatory agencies, private research bodies, trade associations, insurance companies, health associations, and private organizations such as the National Education Association and philanthropic foundations. Consequently, the data vary considerably as to reference periods, definitions of terms and, for ongoing series, the number and frequency of time periods for which data are available.

The statistics presented were obtained and tabulated by various means. Some statistics are based on complete enumerations or censuses while others are based on samples. Some information is extracted from records kept for administrative or regulatory purposes (school enrollment, hospital records, securities registration, financial accounts, social security records, income tax returns, etc.), while other information is obtained explicitly for statistical purposes through interviews or by mail. The estimation procedures used vary from highly sophisticated scientific techniques, to crude “informed guesses.”

Each set of data relates to a group of individuals or units of interest referred to as the *target universe* or *target population*, or simply as the *universe* or *population*. Prior to data collection the target universe should be clearly defined. For example, if data are to be collected for the universe of households in the United States, it is necessary to define a “household.” The target universe may not be completely tractable. Cost and other considerations may restrict data collection to a *survey universe* based on some available list, such list may be inaccurate or out of date. This list is called a *survey frame* or *sampling frame*.

The data in many tables are based on data obtained for all population units, a *census*, or on data obtained for only a portion, or *sample*, of the population units. When the data presented are based on a sample, the sample is usually a scientifically selected *probability sample*. This is a sample selected from a list or sampling frame in such a way that every possible sample has a known chance of selection and usually each unit selected can be assigned a number, greater than zero and less than or equal to one, representing its likelihood or probability of selection.

For large-scale sample surveys, the probability sample of units is often selected as a multistage sample. The first stage of a multistage sample is the selection of a probability sample of large groups of population members, referred to as primary sampling units (PSUs). For example, in a national multistage household sample, PSUs are often counties or groups of counties. The second stage of a multistage sample is the selection, within each PSU selected at the first stage, of smaller groups of population units, referred to as secondary sampling units. In subsequent stages of selection, smaller and smaller nested groups are chosen until the ultimate sample of population units is obtained. To qualify a multistage sample as a probability sample, all stages of sampling must be carried out using probability sampling methods.

Prior to selection at each stage of a multistage (or a single stage) sample, a list of the sampling units or sampling frame for that stage must be obtained. For example, for the first stage of selection of a national household sample, a list of the counties and county groups that form the PSUs must be obtained. For the final stage of selection, lists of households, and sometimes persons within the households, have to be compiled in the field. For surveys of economic entities and for

the economic censuses the Bureau generally uses a frame constructed from the Bureau's Business Register. The Business Register contains all establishments with payroll in the United States including small single establishment firms as well as large multi-establishment firms.

Wherever the quantities in a table refer to an entire universe, but are constructed from data collected in a sample survey, the table quantities are referred to as *sample estimates*. In constructing a sample estimate, an attempt is made to come as close as is feasible to the corresponding universe quantity that would be obtained from a complete census of the universe. Estimates based on a sample will, however, generally differ from the hypothetical census figures. Two classifications of errors are associated with estimates based on sample surveys: (1) *sampling error*—the error arising from the use of a sample, rather than a census, to estimate population quantities and (2) *nonsampling error*—those errors arising from nonsampling sources. As discussed below, the magnitude of the sampling error for an estimate can usually be estimated from the sample data. However, the magnitude of the nonsampling error for an estimate can rarely be estimated. Consequently, actual error in an estimate exceeds the error that can be estimated.

The particular sample used in a survey is only one of a large number of possible samples of the same size which could have been selected using the same sampling procedure. Estimates derived from the different samples would, in general, differ from each other. The *standard error* (SE) is a measure of the variation among the estimates derived from all possible samples. The standard error is the most commonly used measure of the sampling error of an estimate. Valid estimates of the standard errors of survey estimates can usually be calculated from the data collected in a probability sample. For convenience, the standard error is sometimes expressed as a percent of the estimate and is called the relative standard error or *coefficient of variation* (CV). For example, an estimate of 200 units with an estimated standard error of 10 units has an estimated CV of 5 percent.

A sample estimate and an estimate of its standard error or CV can be used to construct interval estimates that have a prescribed confidence that the interval includes the average of the estimates derived from all possible samples with a known probability. To illustrate, if all possible samples were selected under essentially the same general conditions, and using the same sample design, and if an estimate and its estimated standard error were calculated from each sample, then: 1) approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average estimate derived from all possible samples; 2) approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average estimate derived from all possible samples; and 3) approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average estimate derived from all possible samples.

Thus, for a particular sample, one can say with the appropriate level of confidence (e.g., 90 percent or 95 percent) that the average of all possible samples is included in the constructed interval. Example of a confidence interval: An estimate is 200 units with a standard error of 10 units. An approximately 90 percent confidence interval (plus or minus 1.6 standard errors) is from 184 to 216.

All surveys and censuses are subject to nonsampling errors. Nonsampling errors are of two kinds—*random* and *nonrandom*. Random nonsampling errors arise because of the varying interpretation of questions (by respondents or interviewers) and varying actions of coders, keyers, and other processors. Some randomness is also introduced when respondents must estimate. Nonrandom nonsampling errors result from total nonresponse (no usable data obtained for a sampled unit), partial or item nonresponse (only a portion of a response may be usable), inability or unwillingness on the part of respondents to provide correct information, difficulty interpreting questions, mistakes

in recording or keying data, errors of collection or processing, and coverage problems (overcoverage and undercoverage of the target universe). Random nonresponse errors usually, but not always, result in an understatement of sampling errors and thus an overstatement of the precision of survey estimates. Estimating the magnitude of nonsampling errors would require special experiments or access to independent data and, consequently, the magnitudes are seldom available.

Nearly all types of nonsampling errors that affect surveys also occur in complete censuses. Since surveys can be conducted on a smaller scale than censuses, nonsampling errors can presumably be controlled more tightly. Relatively more funds and effort can perhaps be expended toward eliciting responses, detecting and correcting response error, and reducing processing errors. As a result, survey results can sometimes be more accurate than census results.

To compensate for suspected nonrandom errors, adjustments of the sample estimates are often made. For example, adjustments are frequently made for nonresponse, both total and partial. Adjustments made for either type of nonresponse are often referred to as *imputations*. Imputation for total nonresponse is usually made by substituting for the questionnaire responses of the nonrespondents the “average” questionnaire responses of the respondents. These imputations usually are made separately within various groups of sample members, formed by attempting to place respondents and nonrespondents together that have “similar” design or ancillary characteristics. Imputation for item nonresponse is usually made by substituting for a missing item the response to that item of a respondent having characteristics that are “similar” to those of the nonrespondent.

For an estimate calculated from a sample survey, the *total error* in the estimate is composed of the sampling error, which can usually be estimated from the sample, and the nonsampling error, which usually cannot be estimated from the

sample. The total error present in a population quantity obtained from a complete census is composed of only nonsampling errors. Ideally, estimates of the total error associated with data given in the *Statistical Abstract* tables should be given. However, due to the unavailability of estimates of nonsampling errors, only estimates of the levels of sampling errors, in terms of estimated standard errors or coefficients of variation, are available. To obtain estimates of the estimated standard errors from the sample of interest, obtain a copy of the referenced report which appears at the end of each table.

Source of Additional Material: The Federal Committee on Statistical Methodology (FCSM) is an interagency committee dedicated to improving the quality of federal statistics <<http://fcsm.ssd.census.gov>>.

Principal data bases—Beginning below are brief descriptions of 35 of the sample surveys and censuses that provide a substantial portion of the data contained in this *Abstract*.

U.S. DEPARTMENT OF AGRICULTURE, National Agriculture Statistics Service

Census of Agriculture

Universes, Frequency, and Types of Data:

Complete count of U.S. farms and ranches conducted once every 5 years with data at the national, state, and county level. Data published on farm numbers and related items/ characteristics.

Type of Data Collection Operation: Complete census for number of farms; land in farms; farm income; agriculture products sold; farms by type of organization; total cropland; irrigated land; farm operator characteristics; livestock and poultry inventory and sales; and selected crops harvested. Market value of land, buildings, and products sold, total farm production expenses, machinery and equipment, and fertilizer and chemicals.

Data Collection and Imputation Procedures: Data collection is by mailing questionnaires to all farmers and ranchers. Producers can return their forms by mail or online. Nonrespondents are contacted by telephone and correspondence

follow-ups. Imputations were made for all nonresponse item/characteristics and coverage adjustments were made to account for missed farms and ranches. The response rate for the 2007 Census was 85.2 percent.

Estimates of Sampling Error: Weight adjustments were made to account for the undercoverage and whole-unit non-response of farms on the Census Mail List (CML). These were treated as sampling errors.

Other (nonsampling) Errors: Nonsampling errors are due to incompleteness of the census mailing list, duplications on the list, respondent reporting errors, errors in editing reported data, and in imputation for missing data. Evaluation studies are conducted to measure certain non-sampling errors such as list coverage and classification error. It is a reasonable assumption that the net effect of non measurable errors is zero (the positive errors cancel the negative errors).

Sources of Additional Material: U.S. Department of Agriculture (NASS), 2007 Census of Agriculture, Appendix A-1 Census of Agriculture Methodology, Appendix B-1 General Explanation and Census of Agriculture Report Form.

Basic Area Frame Sample

Universe, Frequency, and Types of Data: June agricultural survey collects data on planted acreage and livestock inventories on all land in the 48 contiguous states and Hawaii. The survey also serves to measure list incompleteness and is subsampled for multiple frame surveys.

Type of Data Collection Operation: Stratified probability sample of about 11,000 land area units of about 1 sq. mile (range from 0.1 sq. mile in cities to several sq. miles in open grazing areas). Sample includes 42,000 parcels of agricultural land. About 20 percent of the sample replaced annually.

Data Collection and Imputation Procedures: Data collection is by personal enumeration. Imputation is based on enumerator observation or data reported by respondents having similar agricultural characteristics.

Estimates of Sampling Error: Estimated CVs range from 1 percent to 2 percent for regional estimates to 3 percent to 6 percent for state estimates of major crop acres and livestock inventories.

Other (nonsampling) Errors: Minimized through rigid quality controls on the collection process and careful review of all reported data.

Sources of Additional Material: U.S. Department of Agriculture, National Agricultural Statistics Service, USDA's National Agricultural Statistics Service: The Fact Finders of Agriculture, March 2007.

Multiple Frame Surveys

Universe, Frequency, and Types of Data: Surveys of U.S. farm operators to obtain data on major livestock inventories, selected crop acreage and production, grain stocks, and farm labor characteristics, farm economic data, and chemical use data. Estimates are made quarterly, semi-annually, or annually depending on the data series.

Type of Data Collection Operation: Primary frame is obtained from general or special purpose lists, supplemented by a probability sample of land areas used to estimate for list incompleteness.

Data Collection and Imputation Procedures: Mail, telephone, or personal interviews used for initial data collection. Mail nonrespondent follow-up by phone and personal interviews. Imputation based on average of respondents.

Estimates of Sampling Error: Estimated CVs range from 1 percent to 2 percent at the U.S. level for crop and livestock data series and 3 to 5 percent for economic data. Regional CVs range from 3 to 6 percent, while state estimate CVs run 5 to 10 percent.

Other (nonsampling) Errors: In addition to above, replicated sampling procedures used to monitor effects of changes in survey procedures.

Sources of Additional Material: U.S. Department of Agriculture, National Agricultural Statistics Service, USDA's National Agricultural Statistics Service: The Fact Finders of Agriculture, March 2007.

Objective Yield Surveys

Universe, Frequency, and Types of Data:

Monthly surveys during the growing season of corn, cotton, potatoes, soybeans, and winter wheat fields in top producing states for forecasting and estimating yield per acre.

Type of Data Collection Operation: Random location of plots in probability sample. Corn, cotton, and soybeans, are selected in June from Basic Area Frame Sample (see above). Winter wheat and potatoes are selected from March and June multiple frame surveys, respectively.

Data Collection and Imputation Procedures: Enumerators count and measure plant characteristics in sample fields. Production is measured from plots at harvest. Harvest loss is measured from post harvest gleanings.

Estimates of Sampling Error: CVs for national estimates of production are about 2 to 3 percent.

Other (nonsampling) Errors: In addition to above, replicated sampling procedures are used to monitor effects of changes in survey procedures.

Sources of Additional Material: U.S. Department of Agriculture, National Agricultural Statistics Service), USDA's National Agricultural Statistics Service: The Fact Finders of Agriculture, March 2007.

U.S. BUREAU OF JUSTICE
STATISTICS (BJS)

National Crime Victimization Survey

Universe, Frequency, and Types of Data:

Monthly survey of individuals and households in the United States to obtain data on criminal victimization of those units for compilation of annual estimates.

Type of Data Collection Operation:

National probability sample survey of about 40,000 interviewed households in 203 PSUs selected from a list of addresses from the 2000 census, supplemented by new construction permits and an area sample where permits are not required.

Data Collection and Imputation Procedures: Interviews are conducted every 6 months for 3 years for each household in the sample; 6,600 households are interviewed monthly. Personal interviews are used in the first interview; the intervening interviews are conducted by telephone whenever possible.

Estimates of Sampling Error: CVs for 2007 estimates are: 3.9 percent for personal crimes (includes all crimes of violence plus purse snatching crimes), 4.0 percent for crimes of violence; 13.2 percent for estimate of rape/sexual assault counts; 9.2 percent for robbery counts; 4.3 percent for assault counts; 14.5 percent for purse snatching/pocket picking; 2.0 percent for property crimes; 4.0 percent for burglary counts; 2.0 percent for theft (of property); and 6.5 percent for motor vehicle theft counts.

Other (nonsampling) Errors: Respondent recall errors which may include reporting incidents for other than the reference period; interviewer coding and processing errors; and possible mistaken reporting or classifying of events. Adjustment is made for a household noninterview rate of about 8 percent and for a within-household noninterview rate of 14 percent.

Sources of Additional Material: U.S. Bureau of Justice Statistics, *Criminal Victimization in the United States*, annual.

U.S. BUREAU OF LABOR
STATISTICS

Consumer Expenditure Survey (CE)

Universe, Frequency and Types of Data:

Consists of two continuous components: a quarterly interview survey and a weekly diary or recordkeeping survey. They are nationwide surveys that collect data on consumer expenditures, income, characteristics, and assets and liabilities. Samples are national probability samples of households that are representative of the civilian noninstitutional population. The surveys have been ongoing since 1980.

Type of Data Collection Operation: The Interview Survey is a panel rotation survey. Each panel is interviewed for five quarters and then dropped from the survey. About 7,000 consumer units are

interviewed each quarter. The Diary Survey sample is new each year and consists of about 7,000 consumer units. Data are collected on an ongoing basis in 91 areas of the country.

Data Collection and Imputation Procedures: For the Interview Survey, data are collected by personal interview with each consumer unit interviewed once per quarter for five consecutive quarters. Designed to collect information that respondents can recall for 3 months or longer, such as large or recurring expenditures. For the Diary Survey, respondents record all their expenditures in a self-reporting diary for two consecutive one-week periods. Designed to pick up items difficult to recall over a long period, such as detailed food expenditures. Missing or invalid attributes, expenditures, or incomes are imputed. Assets and liabilities are not imputed. The U.S. Census Bureau collects the data for the Bureau of Labor Statistics.

Estimates of Sampling Error: Standard error tables are available since 2000.

Other (nonsampling) Errors: Includes incorrect information given by respondents, data processing errors, interviewer errors, and so on. They occur regardless of whether data are collected from a sample or from the entire population.

Sources of Additional Material: Bureau of Labor Statistics, see Internet site <<http://www.bls.gov/cex>>.

Consumer Price Index (CPI)

Universe, Frequency, and Types of Data: A monthly survey of price changes of all types of consumer goods and services purchased by urban wage earners and clerical workers prior to 1978, and urban consumers thereafter. Both indexes continue to be published.

Type of Data Collection Operation: Prior to 1978, and since 1998, sample of various consumer items in 87 urban areas; from 1978 - 1997, in 85 PSUs, except from January 1987 through March 1988, when 91 areas were sampled.

Data Collection and Imputation Procedures: Prices of consumer items are obtained each month from about 25,500 retail outlets and from about 4,000 housing units in 87 areas. Prices of

food, fuel, and a few other items are obtained monthly; prices of most other commodities and services are collected every month in the three largest geographic areas and every other month in others.

Estimates of Sampling Error: Estimates of standard errors are available.

Other (nonsampling) Errors: Errors result from inaccurate reporting, difficulties in defining concepts and their operational implementation, and introduction of product quality changes and new products.

Sources of Additional Material: U.S. Bureau of Labor Statistics, Internet site <<http://www.bls.gov/cpi/home.htm>> and *BLS Handbook of Methods*, Chapter 17, see Internet site <<http://www.bls.gov/opub/hom/pdf/homch17.pdf>>.

Current Employment Statistics (CES) Program

Universe, Frequency, and Types of Data: Monthly survey drawn from a sampling frame of over 8 million unemployment insurance tax accounts in order to obtain data by industry on employment, hours, and earnings.

Type of Data Collection Operation: In 2006, the CES sample included about 150,000 businesses and government agencies, which represent approximately 390,000 individual worksites.

Data Collection and Imputation Procedures: Each month, the state agencies cooperating with BLS, as well as BLS Data Collection Centers, collect data through various automated collection modes and mail. BLS Washington staff prepares national estimates of employment, hours, and earnings while states use the data to develop state and area estimates.

Estimates of Sampling Errors: The relative standard error for total nonfarm employment is 0.1 percent. From April 2002 to March 2003, the cumulative net birth/death model added 469,000.

Other (nonsampling) Errors: Estimates of employment adjusted annually to reflect complete universe. Average adjustment is 0.2 percent over the last decade, with an absolute range from less than 0.1 percent to 0.6 percent.

Sources of Additional Material: U.S. Bureau of Labor Statistics, Employment and Earnings, monthly, Explanatory Notes and Estimates of Errors, Tables 2-A through 2-F. See <<http://www.bls.gov/web/cestntab.htm>>.

National Compensation Survey (NCS)

Universe, Frequency, and Types of Data:

NCS collects data from establishments of all employment-size classes in private industries as well as state and local governments. The survey stratifies its data by geographic area and industry. NCS collects data on work schedules, wages, salaries, and employer costs for employee benefits. For approximately 80 metropolitan areas and the nation, NCS produces information on workers' earnings and benefits in a variety of occupations at different work levels. NCS is also responsible for two quarterly releases: the Employment Cost Index (ECI), which measures percent changes in the cost of employment, and the Employer Costs for Employee Compensation (ECEC), which measures costs per hour worked for individual benefits. The survey provides data by industry sector, industry division, occupational group, bargaining status, metropolitan area status, census region, and census division. ECEC also provides data by establishment-size class.

Type of Data Collection Operation: Establishments are selected for the survey based on a probability-proportionate-to-employment technique. NCS replaces its sample on a continual basis. Private industry establishments are in the survey for approximately 5 years.

Data Collection and Imputation Procedures: A personal visit to the establishment is the initial source for collecting data. Communication via mail, fax, and telephone provide quarterly updates. Imputation is done for individual benefits.

Estimates of Sampling Error: NCS uses standard errors to evaluate published series. These standard errors are available at <<http://www.bls.gov/ncs/ect/home.htm>>.

Other (nonsampling) Errors: Nonsampling errors have a number of potential sources. The primary sources are

(1) survey nonresponse and (2) data collection and processing errors. Nonsampling errors are not measured. The use of quality assurance programs reduces the potential for nonsampling errors. These programs include the use of reinterviews, interview observations, and the systematic professional review of reports. The programs also serve as a training device that provides feedback on errors for field economists (or data collectors). Quality assurance programs also provide information on sources of error. This information is used to improve procedures that result in fewer errors. NCS also conducts extensive training of field economists to maintain high standards in data collection.

Sources of Additional Material: Bureau of Labor Statistics, *BLS Handbook of Methods*, Chapter 8 <<http://www.bls.gov/opub/hom/pdf/homch8.pdf>>.

Producer Price Index (PPI)

Universe, Frequency, and Types of Data:

Monthly survey of producing companies to determine price changes of all commodities and services produced in the United States for sale in commercial transactions. Data on agriculture, forestry, fishing, manufacturing, mining, gas, electricity, construction, public utilities, wholesale trade, retail trade, transportation, healthcare, and other services.

Type of Data Collection Operation: Probability sample of approximately 30,000 establishments that result in about 120,000 price quotations per month.

Data Collection and Imputation Procedures: Data are collected by mail and facsimile. Missing prices are estimated by those received for similar products or services. Some prices are obtained from trade publications, organized exchanges, and government agencies. To calculate index, price changes are multiplied by their relative weights taken from the Census Bureau's 2002 shipment values from their Census of Industries.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Not available at present.

Sources of Additional Material: U.S. Bureau of Labor Statistics, *BLS Handbook of Methods*, Chapter 14, Bulletin 2490. U.S. Bureau of Labor Statistics Internet site <<http://stats.bls.gov/ppi>>.

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

Survey of Consumer Finances

Universe, Frequency, and Types of Data:

Periodic sample survey of families. In this survey a given household is divided into a primary economic unit and other economic units. The primary economic unit, which may be a single individual, is generally chosen as the person or couple who either holds the title to the home or is listed on the lease, along with all other people in the household who are financially interdependent with that person or couple. The primary economic unit is used as the reference family. The survey collects detailed data on the composition of family balance sheets, the terms of loans, and relationships with financial institutions. It also gathers information on the employment history and pension rights of the survey respondent and the spouse or partner of the respondent.

Type of Data Collection Operation: The survey employs a two-part strategy for sampling families. Some families are selected by standard multistage area probability sampling methods applied to all 50 states. The remaining families in the survey are selected using statistical records derived from tax returns, under the strict rules governing confidentiality and the rights of potential respondents to refuse participation.

Data Collection and Imputation Procedures: National Opinion Research Center (NORC) at the University of Chicago has collected data for the survey since 1992. Since 1995, the survey has used computer-assisted personal interviewing. Adjustments for nonresponse are made through multiple imputation of unanswered questions and through weighting adjustments based on data used in the sample design for families that refused participation.

Estimates of Sampling Error: Because of the complex design of the survey, the estimation of potential sampling errors

is not straightforward. A replicate-based procedure is available.

Other (nonsampling) Errors: The survey aims to complete 4,500 interviews, with about two thirds of that number deriving from the area-probability sample. The response rate is typically about 70 percent for the area-probability sample and about 35 percent over all strata in the tax-data sample. Proper training and monitoring of interviewers, careful design of questionnaires, and systematic editing of the resulting data were used to control inaccurate survey responses.

Sources of Additional Material: Board of Governors of the Federal Reserve System, "Recent Changes in U.S. Family Finances: Evidence from the Survey of Consumer Finances," *Federal Reserve Bulletin*, 2009, <<http://www.federalreserve.gov/Pubs/Bulletin>>.

U.S. CENSUS BUREAU

2007 Economic Census

(Industry Series, Geographic Area Series and Subject Series Reports) (for NAICS sectors 21 to 81).

Universe, Frequency, and Types of Data: Conducted every 5 years to obtain data on number of establishments, number of employees, payroll, total sales/receipts/revenue, and other industry-specific statistics. The universe is all establishments with paid employees excluding agriculture, forestry, fishing and hunting, and government. (Nonemployer Statistics, discussed separately, covers those establishments without paid employees.)

Type of Data Collection Operation: All large employer firms were surveyed (i.e., all employer firms above payroll-size cutoffs established to separate large from small employers) plus, in most sectors, a sample of the small employer firms.

Data Collection and Imputation Procedures: Mail questionnaires were used with both mail and telephone follow-ups for nonrespondents. Businesses also had the option to respond electronically. Data for nonrespondents and for small

employer firms not mailed a questionnaire were obtained from administrative records of other federal agencies or imputed.

Estimates of Sampling Error: Not applicable for basic data such as sales, revenue, receipts, payroll, etc. for sectors other than Construction (NAICS 23). Estimates of sampling error for construction industries are included with the data as published on the Census Bureau web site. Other (nonsampling) errors: establishment response rates by NAICS sector in 2002 ranged from 80 percent to 89 percent. Nonsampling errors may occur during the collection, reporting, keying, and classification of the data.

Sources of Additional Material:

U.S. Census Bureau, see

<<http://www.census.gov/econ/census07/census07/www/methodology>>.

American Community Survey (ACS)

Universe, Frequency, and Types of Data:

Nationwide survey to obtain annual data about demographic, social, economic, and housing characteristics of housing units and the people residing in them. It covers the household population and, beginning in 2006, also includes the group quarter population living in prisons, nursing homes and college dormitories, and other group quarters.

Type of Data Collection Operation: Housing unit address sampling is performed twice a year in both August and January. First-phase of sampling defines the universe for the second stage of sampling through two steps. First, all addresses that were eligible for the second-phase sampling within the past four years are excluded from eligibility. This ensures that no address is in sample more than once in any 5-year period. The second step is to select a 20 percent systematic sample of "new" units, i.e. those units that have never appeared on a previous Master Address File (MAF) extract. All new addresses are systematically assigned to either the current year or to one of four back-samples. This procedure maintains five equal partitions of the universe. The second-phase sampling is done on the current year's partition and results in approximately 3,000,000 housing unit addresses in the

U.S. and 36,000 in Puerto Rico (PR).

Group quarter sampling is performed separately from the housing unit sampling. The sampling begins with separating the small (15 persons or fewer) and the large (more than 15 persons) group quarters. The target sampling rate for both groups is a 2.5% sample of the group quarters population. It results in approximately 200,000 group quarter residents being selected in the U.S., and an additional 1,000 in Puerto Rico.

Data Collection and Imputation Procedures:

The American Community Survey is conducted every month on independent samples. Each housing unit in the independent monthly samples is mailed a prenotice letter announcing the selection of the address to participate, a survey questionnaire package, and a reminder postcard. These sample units addresses receive a second (replacement) questionnaire package if the initial questionnaire has not been returned by mid-month. Sample addresses for which a questionnaire is not returned in the mail and a telephone number is available is forwarded to telephone centers is available, is forwarded to telephone centers for follow-up. Interviewers attempt to contact and interview these mail nonresponse cases by telephone. Sample addresses that are still unresponsive after two months of attempts are forwarded for a possible personal visit. Unresponsive addresses are subsampled at rates between 1 in 3 and 2 in 3. Those addresses selected through this process are assigned to Field Representatives (FRs), who visit the addresses, verify their existence, determine their occupancy status, and conduct interviews. Collection of group quarters data is conducted by FR's only. Their methods include completing the questionnaire while speaking to the resident in person or over the telephone, or leaving paper questionnaires for residents to complete for themselves and then pick them up later. This last option is used for data collection in federal prisons. If needed, a personal interview can be conducted with a proxy, such as a relative or guardian. After data collection is completed, any remaining incomplete or inconsistent information on the questionnaire are imputed during the final automated edit of the collected data.

Estimates of Sampling Error: The data in the ACS products are estimates and can vary from the actual values that would have been obtained by conducting a census of the entire population. The estimates from the chosen sample addresses can also vary from those that would have been obtained from a different set of addresses. This variation causes uncertainty, which can be measured using statistics such as standard error, margin of error, and confidence interval. All ACS estimates are accompanied by margin of errors to assist users.

Other (nonsampling) Errors: Nonsampling Error — In addition to sampling error, data users should realize that other types of errors may be introduced during any of the various complex operations used to select, collect and process survey data. An important goal of the ACS is to minimize the amount of nonsampling error introduced through coverage issues in the sample list, nonresponse from sample housing units, and transcribing or editing data. One way of accomplishing this is by finding additional sources of addresses, following up on nonrespondents and maintaining quality control systems.

Sources of Additional Material:
U.S. Census Bureau, American Community Survey Web site <<http://www.census.gov/acs/www/index.html>>. U.S. Census Bureau, American Community Survey Accuracy of the Data documents at <<http://www.census.gov/acs/www/UseData/Accuracy/Accuracy1.htm>>.

American Housing Survey

Universe, Frequency, and Types of Data:
Conducted nationally in odd numbered years to obtain data on the approximately 124 million occupied or vacant housing units in the United States (group quarters are excluded). Data include characteristics of occupied housing units, vacant units, new housing and mobile home units, financial characteristics, recent mover households, housing and neighborhood quality indicators, and energy characteristics.

Type of Data Collection Operation: The national sample was a multistage probability sample with about 57,000 units

eligible for interview in 2005. Sample units, selected within 394 PSUs, were surveyed over a 4-month period.

Data Collection and Imputation Procedures: For 2005, the survey was conducted by personal interviews. The interviewers obtained the information from the occupants or, if the unit was vacant, from informed persons such as landlords, rental agents, or knowledgeable neighbors.

Estimates of Sampling Error: For the national sample, illustrations of the Standard Error (SE) of the estimates are provided in the Appendix D of the 2005 report.

Other (nonsampling) Errors: Response rate was about 90 percent. Nonsampling errors may result from incorrect or incomplete responses, errors in coding and recording, and processing errors. Appendix D of the 2005 report has a complete discussion of the errors.

Sources of Additional Material:
U.S. Census Bureau, *Current Housing Reports*, Series H-150 and H-170, *American Housing Survey* see <<http://www.census.gov/hhes/www/ahs.html>>.

Annual Survey of Government Employment and Payroll

Universe, Frequency, and Types of Data:
The survey measures the number of state, local and federal civilian government employees and their gross payrolls for the pay period including March 12. The survey is conducted annually except in years ending in '2' and '7', when a census of all state and local governments is done. The survey provides data on full-time and part-time employment, part-time hours worked, full-time equivalent employment, and payroll statistics by governmental function (elementary and secondary education, higher education, police protection, fire protection, financial administration, central staff services, judicial and legal, highways, public welfare, solid waste management, sewerage, parks and recreation, health, hospitals, water supply, electric power, gas supply, transit, natural resources, correction, libraries, air transportation, water transport and terminals, other education, state liquor stores, social insurance administration, and housing and community development).

Type of Data Collection Operations: The survey sample was taken from the 2002 Census of Governments and contains approximately 11,000 local government units. These units were sampled from a sampling frame that contained 83,767 local governments (county, city, township, special district, school districts) in addition to 50 state governments and the District of Columbia. This frame was slightly different from the Annual Finance Survey sampling frame. Forty-two of the state governments provided data from central payroll records for all or most of their agencies/institutions. Data for agencies and institutions for the remaining state governments were obtained by mail canvass questionnaires. Local governments were also canvassed using a mail questionnaire. However, elementary and secondary school system data in Florida, North Dakota, and Washington were supplied by special arrangements with the state education agency in each of these states. All respondents receiving the mail questionnaire had the option of responding using the Employment Web site developed for reporting data. Approximately 26% of the state agency and local government respondents chose to respond on the Web.

Editing and Imputation Procedures: Editing is a process that ensures survey data are accurate, complete, and consistent. Efforts are made at all phases of collection, processing, and tabulation to minimize errors. Although some edits are built into the Internet data collection instrument and the data entry programs, the majority of the edits are performed after the case has been loaded into the Census Bureau's database. Edits consist primarily of two types: consistency and a ratio of the current year's reported value to the prior year's value. The consistency edits check the logical relationships of data items reported on the form. For example, if a value exists for employees for a function then a value must exist for payroll also. If part-time employees and payroll are reported then part-time hours must be reported and vice versa. The current year/prior year edits compare data for the number of employees, the function reported for the employees, and the average salary

between reporting years. If data fall outside of acceptable tolerance levels, the item is flagged for review. Some additional checks are made comparing data from the Annual Finance Survey to data reported on the Annual Survey of Government Employment and Payroll to verify that employees reported on the Annual Survey of Government Employment and Payroll at a particular function have a corresponding expenditure on the Finance Survey. For both types of edits, the edit results are reviewed by analysts and adjusted when needed. When the analyst is unable to resolve or accept the edit failure, contact is made with the respondent to verify or correct the reported data.

Imputation: Not all respondents answer every item on the questionnaire. There are also questionnaires that are not returned despite efforts to gain a response. Imputation is the process of filling in missing or invalid data with reasonable values in order to have a complete data set. For general purpose governments and for schools, the imputations were based on recent historical data from either a prior year annual survey or the most recent Census of Governments, if it was available. These data were adjusted by a growth rate that was determined by the growth of units that were similar (in size, geography, and type of government) to the nonrespondent. If there was no recent historical data available, the imputations were based on the data from a randomly selected donor that was similar to the nonrespondent. This donor's data were adjusted by dividing each data item by the population (or enrollment) of the donor and multiplying the result by the nonrespondent's population (or enrollment). For special districts, if prior year data are available, the data are brought forward with a national level growth rate applied. Otherwise, the data are imputed to be zero. In cases where good secondary data sources exist, the data from those sources were used.

Estimates of Sampling Error: For intercensal surveys, estimated coefficients of variation for all variables are given in tabulations on the Website. For U.S. and

state-and-local government-level estimates of total full-time equivalents and total payroll, most relative standard errors are generally less than one percent, but vary considerably for detailed characteristics.

Other (nonsampling) Errors: Although every effort is made in all phases of collection, processing, and tabulation to minimize errors, the sample data are subject to nonsampling errors such as inability to obtain data for every variable from all units in the sample, inaccuracies in classification, response errors, misinterpretation of questions, mistakes in keying and coding, and coverage errors. These same errors may be evident in census collections and may affect the Census of Governments data used to adjust the sample during the estimation phase and used in the imputation process.

<<http://www.census.gov/govs/www/apesstl06.html>>.

Annual Survey of Government Finances

Universe, Frequency, and Types of Data:

The United States Census Bureau conducts an Annual Survey of Government Finances, as authorized by law under Title 13, United States Code, Section 182. Alternatively, every 5 years, in years ending in a '2' or '7', a Census of Governments, including a Finance portion, is conducted under Title 13, Section 161. The survey coverage includes all state and local governments in the United States. For both the Census and annual survey, the finance detail data is equivalent, encompassing the entire range of government finance activities—revenue, expenditure, debt, and assets.

Type of Data Collection Operations: The data collection phase for the annual survey made use of three methods to obtain data: mail canvass, internet collection, and central collection from State sources. In 28 states, all or part of the general purpose finance data for local governments was obtained from cooperative arrangements between the Census Bureau and a state government

agency. These usually involved a data collection effort carried out to meet the needs of both agencies—the state agency for purposes of audit, oversight, or information, and the Census Bureau for statistical purposes. Data for the balance of local governments in this annual survey were obtained via mail questionnaires sent directly to county, municipal, township, special district, and school district governments. School district data were collected via cooperative arrangements with state education agencies. Data for state governments were compiled by analysts of the Census Bureau, usually with the cooperation and assistance of state officials. The data were compiled from state government audits, budgets, and other financial reports, either in printed or electronic format. The compilation generally involved recasting the state financial records into the classification categories used for reporting by the Census Bureau.

Data Collection and Imputation Procedures: Survey is conducted by mail with mail follow-ups of nonrespondents. Imputation for all nonresponse items is based on previous year reports or, for new governments, on data from similar donors.

Estimates of Sampling Error: The local government statistics in the intercensal survey years are developed from a sample survey. Therefore, the local totals, as well as aggregates of state and local government data, are considered estimated amounts subject to sampling error. State government finance data are not subject to sampling. Consequently, State-local aggregates shown here have a relative standard error less than or equal to the local government estimates they include. Estimates of major United States totals for local governments are subject to a computed sampling variability of less than one-half of 1 percent. State and local government totals are generally subject to sampling variability of less than 3 percent.

Other (nonsampling) Errors: The estimates are also subject to inaccuracies in classification, response, and processing. Efforts were made at all phases of collection, processing, and tabulation to minimize errors. However, the data are

still subject to errors from imputations for missing data, errors from misreported data, errors from miscoding, and difficulties in identifying every unit that should be included in the report. Every effort was made to keep such errors to a minimum through care in examining, editing, and tabulating the data reported by government officials.

Sources of Additional Material:

<<http://www.census.gov/govs/index.html>> and <<http://www.census.gov/govs/state/index.html>>.

Annual Survey of Manufactures (ASM)

Universe, Frequency, and Types of Data:

The Annual Survey of Manufactures is conducted annually, except for years ending in '2' and '7' for all manufacturing establishments having one or more paid employees. The purpose of the ASM is to provide key intercensal measures of manufacturing activity, products, and location for the public and private sectors. The ASM provides statistics on employment, payroll, worker hours, payroll supplements, cost of materials, value added by manufacturing, capital expenditures, inventories, and energy consumption. It also provides estimates of value of shipments for 1,800 classes of manufactured products.

Type of Data Collection Operation: The ASM includes approximately 50,000 establishments selected from the census universe of 346,000 manufacturing establishments. Approximately 24,000 large establishments are selected with certainty, and the remaining 26,000 other establishments are selected with probability proportional to a composite measure of establishment size. The survey is updated from two sources: Internal Revenue Service administrative records are used to include new single-unit manufacturers and the Company Organization Survey identifies new establishments of multiunit forms.

Data Collection and Imputation Procedures: Survey is conducted by mail with phone and mail follow-ups of nonrespondents. Imputation (for all nonresponse items) is based on previous year reports, or for new establishments in survey, on industry averages.

Estimates of Sampling Error: Estimated relative standard errors for number of employees, new expenditures, and for value added totals are given in annual publications. For U.S. level industry statistics, most estimated relative standard errors are 2 percent or less, but vary considerably for detailed characteristics.

Other (nonsampling) Errors: The unit response rate is about 85 percent. Nonsampling errors include those due to collection, reporting, and transcription errors, many of which are corrected through computer and clerical checks.

Sources of Additional Material:

U.S. Census Bureau, *Annual Survey of Manufactures*, and Technical Paper 24.

Census of Population

Universe, Frequency, and Types of Data:

Complete count of U.S. population conducted every 10 years since 1790. Data obtained on number and characteristics of people in the U.S.

Type of Data Collection Operation: In the 1990, and 2000 censuses the 100 percent items included: age, date of birth, sex, race, Hispanic origin, and relationship to householder. In 1980, approximately 19 percent of the housing units were included in the sample; in 1990 and 2000, approximately 17 percent.

Data Collection and Imputation Procedures: In 1980, 1990, and 2000, mail questionnaires were used extensively with personal interviews in the remainder. Extensive telephone and personal follow-up for nonrespondents was done in the censuses. Imputations were made for missing characteristics.

Estimates of Sampling Error: Sampling errors for data are estimated for all items collected by sample and vary by characteristic and geographic area. The coefficients of variation (CVs) for national and state estimates are generally very small.

Other (nonsampling) Errors: Since 1950, evaluation programs have been conducted to provide information on the magnitude of some sources of nonsampling errors such as response bias and undercoverage in each census. Results from the evaluation program for the 1990 census indicated that the estimated net undercoverage amounted to

about 1.5 percent of the total resident population. For Census 2000, the evaluation program indicated a net overcount of 0.5 percent of the resident population.

Sources of Additional Material:

U.S. Census Bureau, The Coverage of Population in the 1980 Census, PHC80-E4; *Content Reinterview Study: Accuracy of Data for Selected Population and Housing Characteristics as Measured by Reinterview*, PHC80-E2; *1980 Census of Population*, Vol. 1, (PC80-1), Appendixes B, C, and D. *Content Reinterview Survey: Accuracy of Data for Selected Population and Housing Characteristics as Measured by Reinterview*, 1990, CPH-E-1; Effectiveness of Quality Assurance, CPH-E-2; Programs to Improve Coverage in the 1990 Census, 1990, CPH-E-3. For Census 2000 evaluations, see <<http://www.census.gov/pred/www>>.

County Business Patterns

Universe, Frequency, and Types of Data:

County Business Patterns is an annual tabulation of basic data items extracted from the Business Register, a file of all known single- and multilocation employer companies maintained and updated by the U.S. Census Bureau. Data include number of establishments, number of employees, first quarter and annual payrolls, and number of establishments by employment size class. Data are excluded for self-employed individuals, private households, railroad employees, agricultural production workers, and most government employees.

Type of Data Collection Operation: The annual Company Organization Survey provides individual establishment data for multilocation companies. Data for single establishment companies are obtained from various Census Bureau programs, such as the Annual Survey of Manufactures and Current Business Surveys, as well as from administrative records of the Internal Revenue Service, the Social Security Administration, and the Bureau of Labor Statistics.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: The data are subject to nonsampling errors, such as

inability to identify all cases in the universe; definition and classification difficulties; differences in interpretation of questions; errors in recording or coding the data obtained; and estimation of employers who reported too late to be included in the tabulations and for records with missing or misreported data.

Sources of Additional Materials:

U.S. Census Bureau, County Business Patterns <<http://www.census.gov/econ/cbp/view/cbpview.html>>.

Current Population Survey (CPS)

Universe, Frequency, and Types of Data:

Nationwide monthly sample designed primarily to produce national and state estimates of labor force characteristics of the civilian noninstitutionalized population 16 years of age and older.

Type of Data Collection Operation: Multi-stage probability sample that currently includes 72,000 households from 824 sample areas. Sample size increased in some states to improve data reliability for those areas on an annual average basis. A continual sample rotation system is used. Households are in sample 4 months, out for 8 months, and in for 4 more. Month-to-month overlap is 75 percent; year-to-year overlap is 50 percent.

Data Collection and Imputation Procedures: For first and fifth months that a household is in sample, personal interviews; other months, approximately 85 percent of the data collected by phone. Imputation is done for item nonresponse. Adjustment for total nonresponse is done by a predefined cluster of units, by state, metropolitan status and CBSA size; for item nonresponse imputation varies by subject matter.

Estimates of Sampling Error: The national total estimates of the civilian labor force and of employment have monthly CVs of about .2 percent and annual average CVs of about .1 percent. Unemployment is a much smaller characteristic and consequently has substantially larger CVs than the civilian labor force or employment. The national unemployment rate, the most important CPS statistic, has a monthly CV of about 2 percent and an annual average CV of about 1 percent.

Assuming a 6 percent unemployment rate, states have annual average CVs of about 8 percent. The estimated CVs for family income and poverty rate for all persons in 2005 are 0.4 percent and 1.2 percent, respectively. CVs for sub-national areas, such as states, tend to be larger and vary by area.

Other (nonsampling) Errors: Estimates of response bias on unemployment are available. Estimates of unemployment rate from reinterviews range from -2.4 percent to 1.0 percent of the basic CPS unemployment rate (over a 30-month span from January 2004 through June 2006). Eligible CPS households are approximately 82 percent of the assigned households, with a corresponding response rate of 92 percent.

Sources of Additional Material:

Foreign Trade—Export Statistics

Universe, Frequency, and Types of Data:

As of October 1, 2008, the Shipper's Export Declaration (SED) Form 7525-V became obsolete. Electronic Export Information (EEI) replaced the SED and all export information must be filed through the Automated Export System (AES) by either a United States Principal Party in Interest (USPPI) or an Authorized U.S. agent. The EEI filings are processed each month to obtain data on the movement of U.S. merchandise exports to foreign countries. Data obtained include value, quantity, and shipping weight of exports by commodity, country of destination, district of exportation, and mode of transportation.

Type of Data Collection Operation: USPPIs or Authorized U.S. Agents are required to submit EEI for exportation of merchandise valued over \$2,500. Data for

shipments valued under \$2,501 are estimated, based on established percentages of individual country totals.

Data Collection and Imputation Procedures: The EEI filings are received on a daily basis from ports throughout the country and subjected to a monthly processing cycle. They are fully processed to the extent they reflect items valued over \$2,500. Estimates for shipments valued at \$2,500 or less are made, based on established percentages of individual country totals.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: The goods data are a complete enumeration of EEI reported in AES and are not subject to sampling errors; but they are subject to several types of nonsampling errors. Quality assurance procedures are performed at every stage of collection, processing and tabulation; however the data are still subject to several types of nonsampling errors. The most significant of these include reporting errors, undocumented shipments, timeliness, data capture errors, and errors in the estimation of low-valued transactions. The number of data errors and the overall data quality are expected to improve due to the elimination of paper SEDs and the mandatory filing of export data through the AES. Additional information on errors affecting export data can be found at <<http://www.census.gov/foreign-trade/Press-Release/currentpressrelease/explain.pdf>>.

Sources of Additional Material: Effect of Mandatory Electronic Filing on Export data, <<http://www.census.gov/foreign-trade/aip/mandatoryelectronicfiling.html>>. U.S. Census Bureau, FT 900 U.S. International Trade in Goods and Services, FT 925 (discounted after 1996), U.S. Merchandise Trade, FT 895 U.S. Trade with Puerto Rico and U.S. Possessions, FT 920 U.S. Merchandise trade: selected highlights, and Information Section on Goods and Services at <<http://www.census.gov/ft900>>.

Foreign Trade—Import Statistics

Universe, Frequency, and Types of Data:

The import entry documents collected by U.S. Customs and Border Protection are processed each month to obtain data on the movement of merchandise imported into the United States. Data obtained include value, quantity, and shipping weight by commodity, country of origin, district of entry, and mode of transportation.

Type of Data Collection Operation: Import entry documents, either paper or electronic, are required to be filed for the importation of goods into the United States valued over \$2,000 or for articles which must be reported on formal entries. U.S. Bureau of Customs and Border Protection officials collect and transmit statistical copies of the documents to the Census Bureau on a flow basis for data compilation. Estimates for shipments valued under \$2,001 and not reported on formal entries are based on estimated established percentages for individual country totals.

Data Collection and Imputation Procedures: Statistical copies of import entry documents, received on a daily basis from ports of entry throughout the country, are subjected to a monthly processing cycle. They are fully processed to the extent they reflect items valued at \$2,001 and over or items which must be reported on formal entries.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: The goods data are a complete enumeration of documents collected by the U.S. Customs and Border Protection and are not subject to sampling errors; but they are subject to several types of nonsampling errors. Quality assurance procedures are performed at every stage of collection, processing, and tabulation; however the data are still subject to several types of nonsampling errors. Quality assurance procedures are performed at every stage of collection, processing, and tabulation; however the data are still subject to several types of nonsampling errors. The most significant of these include reporting errors, undocumented shipments, timeliness, data capture errors, and

errors in the estimation of low-valued transactions. Additional information on errors affecting import data can be found at <<http://www.census.gov/foreign-trade/Press-Release/currentpressrelease/explain.pdf>>.

Sources of Additional Material:

U.S. Census Bureau, FT 900 U.S. International Trade in Goods and Services, FT 925 (discounted after 1996), U.S. Merchandise Trade, FT 895 U.S. Trade with Puerto Rico and U.S. Possessions, FT920 U.S. Merchandise Trade: selected highlights, and Information Section on Goods and Services at <<http://www.census.gov/ft900>>.

Monthly Retail Trade and Food Service Survey

Universe, Frequency, and Types of Data:

Provides monthly estimates of retail and food service sales by kind of business and end of month inventories of retail stores.

Type of Data Collection Operation: Probability sample of all firms from a list frame. The list frame is the Bureau's Business Register updated quarterly for recent birth Employer Identification (EI) Numbers issued by the Internal Revenue Service and assigned a kind of business code by the Social Security Administration. The largest firms are included monthly; a sample of others is included every month also.

Data Collection and Imputation Procedures: Data are collected by mail questionnaire with telephone follow-ups and fax reminders for nonrespondents. Imputation is made for each nonresponse item and each item failing edit checks.

Estimates of Sampling Error: For the 2006 monthly surveys, CVs are about 0.4 percent for estimated total retail sales and 0.7 percent for estimated total retail inventories. Sampling errors are shown in monthly publications.

Other (nonsampling) Errors: Imputation rates are about 22 percent for monthly retail and food service sales, and 29 percent for monthly retail inventories.

Sources of Additional Material:

U.S. Census Bureau, Current Business Reports, Annual Revision of Monthly Retail and Food Services: Sales and Inventories.

Monthly Survey of Construction

Universe, Frequency, and Types of Data: Survey conducted monthly of newly constructed housing units (excluding mobile homes). Data are collected on the start, completion, and sale of housing. (Annual figures are aggregates of monthly estimates.)

Type of Data Collection Operation: A multistage probability sample of approximately 900 of the 20,000 permit-issuing jurisdictions in the U.S. was selected. Each month in each of these permit offices, field representatives list and select a sample of permits for which to collect data. To obtain data in areas where building permits are not required, a multistage probability sample of 80 land areas (census tracts or subsections of census tracts) was selected. All roads in these areas are canvassed and data are collected on all new residential construction found. Sampled buildings are followed up until they are completed (and sold, if for sale).

Data Collection and Imputation Procedures: Data are obtained by telephone inquiry and/or field visit. Nonresponse/undercoverage adjustment factors are used to account for late reported data.

Estimates of Sampling Error: Estimated CV of 5 percent to 6 percent for estimates of national totals of units started, but may be higher than 20 percent for estimated totals of more detailed characteristics, such as housing units in multiunit structures.

Other (nonsampling) Errors: Response rate is over 90 percent for most items. Nonsampling errors are attributed to definitional problems, differences in interpretation of questions, incorrect reporting, inability to obtain information about all cases in the sample, and processing errors.

Sources of Additional Material: All data are available on the Internet at <<http://www.census.gov/starts>>, <<http://www.census.gov/newhomesales>>, or <<http://www.census.gov/const/www/newsresconstindex.html>>. Further documentation of the survey is also available at those Web sites.

Nonemployer Statistics

Universe, Frequency, and Types of Data: Nonemployer statistics are an annual tabulation of economic data by industry for active businesses without paid employees that are subject to federal income tax. Data showing the number of firms and receipts by industry are available for the U.S., states, counties, and metropolitan areas. Most types of businesses covered by the Census Bureau's economic statistics programs are included in the nonemployer statistics. Tax-exempt and agricultural-production businesses are excluded from nonemployer statistics.

Type of Data Collection Operation: The universe of nonemployer firms is created annually as a byproduct of the Census Bureau's Business Register processing for employer establishments. If a business is active but without paid employees, then it becomes part of the potential nonemployer universe. Industry classification and receipts are available for each potential nonemployer business. These data are obtained primarily from the annual business income tax returns of the Internal Revenue Service (IRS). The potential nonemployer universe undergoes a series of complex processing, editing, and analytical review procedures at the Census Bureau to distinguish nonemployers from employers, and to correct and complete data items used in creating the data tables.

Estimates of Sampling Error:
Not applicable.

Other (nonsampling) Errors: The data are subject to nonsampling errors, such as industry misclassification as well as errors of response, keying, nonreporting, and coverage.

Sources of Additional Material:
U.S. Census Bureau, Nonemployer Statistics.

Service Annual Survey

Universe, Frequency, and Types of Data: The U.S. Census Bureau conducts the Service Annual Survey to provide nationwide estimates of revenues and expenses for selected service industries. Estimates are summarized by industry classification based on the 2002 North

American Industry Classification System (NAICS). Selected service industries covered by the Service Annual Survey include all or part of the following NAICS sectors: Transportation and Warehousing (NAICS 48-49); Information (NAICS 51); Finance and Insurance (NAICS 52); Real Estate and Rental and Leasing (NAICS 53); Professional, Scientific, and Technical Services (NAICS 54); Administrative and Support and Waste Management and Remediation Services (NAICS 56); Health Care and Social Assistance (NAICS 62); Arts, Entertainment, and Recreation (NAICS 71); and Other Services, except Public Administration (NAICS 81). Data collected include total revenue, total expenses, detailed expenses, revenue from e-commerce transactions; and for selected industries, revenue from detailed service products, revenue from exported services, and inventories. For industries with a significant nonprofit component, separate estimates are developed for taxable firms and firms and organizations exempt from federal income taxes. Questionnaires are mailed in January and request annual data for the prior year. Estimates are published approximately 12 months after the initial survey mailing.

Type of Data Collection Operation:

The Service Annual Survey estimates are developed from a probability sample of employer firms and administrative records for nonemployers. Service Annual Survey questionnaires are mailed to a probability sample that is periodically reselected from a universe of firms located in the United States and having paid employees. The sample includes firms of all sizes and covers both taxable firms and firms exempt from federal income taxes. Updates to the sample are made on a quarterly basis to account for new businesses. Firms without paid employees, or nonemployers, are included in the estimates through imputation and/or administrative records data provided by other federal agencies. Links to additional information about confidentiality protection, sampling error, nonsampling error, sample design, definitions, and copies of the questionnaires may be found on the Internet at <<http://www.census.gov/services/index.html>>.

Estimates of Sampling Error: Coefficients of variation (CVs) for the 2007 Service Annual Survey estimates range from 0.7 percent to 2.3 percent for total revenue estimates computed at the NAICS sector (2-digit NAICS code) level. The full 2007 Service Annual Survey results, including coefficients of variations (CVs), can be found at <<http://www.census.gov/services/index.html>>. Links to additional information regarding sampling error may be found at <<http://www.census.gov/services/sas/cv.html>>.

Other (Nonsampling) Errors: Data are imputed for unit nonresponse, item nonresponse, and for reported data that fails edits. The percent of imputed data for total revenue for the 2007 Service Annual Survey estimates range from 6.4 percent to 14.2 percent for total revenue estimates computed at the NAICS sector (2-digit NAICS code) level.

Sources of Additional Material:

U.S. Census Bureau, Current Business Reports, *Service Annual Survey* at <<http://www.census.gov/services/index.html>>.

U.S. DEPARTMENT OF EDUCATION
National Center for Education
Statistics

**Integrated Postsecondary
Education Data Survey
(IPEDS), Completions**

Universe, Frequency, and Types of Data:

Annual survey of all Title IV (federal financial aid) eligible postsecondary institutions to obtain data on earned degrees and other formal awards, conferred by field of study, level of degree, sex, and by racial/ethnic characteristics (every other year prior to 1989, then annually).

Type of Data Collection Operation:

Complete census.

Data Collection and Imputation Procedures:

Data are collected through a Web-based survey in the fall of every year. Missing data are imputed by using data of similar institutions.

Estimates of Sampling Error:

Not applicable.

Other (nonsampling) Errors: For 2005–06, the response rate for degree-granting institutions was 100.0 percent.

Sources of Additional Material:
U.S. Department of Education, National Center for Education Statistics, *Post-secondary Institutions in the United States: Fall 2007 and Degrees and Other Awards Conferred: 2006–07 and 12-month enrollment, 2006–07*. See <<http://www.nces.ed.gov/ipeds/>>.

National Household Education Surveys (NHES) Program

Universe, Frequency, and Types of Data:

The National Household Education Surveys Program is a system of telephone surveys of the noninstitutionalized civilian population of the United States. Surveys in NHES have varying universes of interest depending on the particular survey. Specific topics covered by each survey are at the NHES Web site <<http://nces.ed.gov/nhes>>. A list of the surveys fielded as part of NHES, each universe, and the years they were fielded is provided below: 1) Adult Education—Interviews were conducted with a representative sample of civilian, noninstitutionalized persons aged 16 years and older who were not enrolled in grade 12 or below (1991, 1995, 1999, 2001, 2003, 2005); 2) After-School Programs and Activities—Interviews were conducted with parents of a representative sample of students in grades K through 8 (1999, 2001, 2005); 3) Civic Involvement—Interviews were conducted with representative samples of parents, youth, and adults (1996, 1999); 4) Early Childhood Program Participation—Interviews were conducted with parents of a representative sample of children from birth through grade 3, with the specific age groups varying by survey year (1991, 1995, 1999, 2001, 2005); 5) Household and Library Use—Interviews were conducted with a representative sample of U.S. households (1996); 6) Parent and Family Involvement in Education—Interviews were conducted with parents of a representative sample of children aged 3 years through grade 12 or in grades K through 12 depending on the survey year (1996, 1999, 2003, and 2007 forthcoming); 7) School Readiness—Interviews were conducted with parents of a representative sample of 3-to-7-year-old children (1993 and 1999) and of 3-to-5-year-old children, not yet in

kindergarten (2007 forthcoming); 8) School Safety and Discipline—Interviews were conducted with a representative sample of students in grades 6 through 12, their parents, and the parents of a representative sample of students in grades 3 through 12 (1993).

Type of Data Collection Operation: NHES uses telephone interviews to collect data.

Data Collection and Imputation Procedures: Telephone numbers are selected using random digit dialing (RDD) techniques. Approximately 45,000 to 64,000 households are contacted in order to identify persons eligible for the surveys. Data are collected using computer-assisted telephone interviewing (CATI) procedures. Missing data are imputed using hot-deck imputation procedures.

Estimates of Sampling Error: Unweighted sample sizes range between 2,250 and 55,708. The average root design effects of the surveys in NHES range from 1.1 to 1.5, except for the Adult Education survey of 1991. In 1991, average root design effects for the Adult Education survey ranged from 2.3 to 4.5.

Other (nonsampling) Errors: Because of unit nonresponse and because the samples are drawn from households with telephone instead of all households, nonresponse and/or coverage bias may exist for some estimates. However, both sources of potential bias are adjusted for in the weighting process. Analyses of both potential sources of bias in the NHES collections have been studied and no significant bias has been detected.

Sources of Additional Material: Please see the NHES Web site at <<http://nces.ed.gov/nhes>>.

Schools and Staffing Survey (SASS)

Universe, Frequency and Types of Data:

NCES designed the SASS survey system to emphasize teacher demand and shortage, teacher and administrator characteristics, school programs, and general conditions in schools. SASS also collects data on many other topics, including principals' and teachers' perceptions of school climate and problems

in their schools; teacher compensation; district hiring practices and basic characteristics of the student population. The SASS has had four core components: the School Questionnaire, the Teacher Questionnaire, the Principal Questionnaire, and the School District Questionnaire. For the 2003–04 SASS, a sample of public charter schools is included in the sample as part of the public school questionnaire. Since 1987–88, the SASS is the largest, most extensive survey of K through 12 school districts, schools, teachers, and administrators in the U.S. Surveys have been conducted every 3 to 4 years depending on budgetary constraints. The SASS includes data from public, private, and Bureau of Indian Education (BIE) school sectors. Therefore, the SASS provides a multitude of opportunities for analysis and reporting on elementary and secondary educational issues

Type of Data Collection Operation: The U.S. Census Bureau performs the data collection and begins by sending advance letters to the sampled Local Education Agencies (LEAs) and schools in August and September of collection years. Beginning in October, questionnaires are delivered by U.S. Census Bureau field representatives. The sampling frame for the public school sample is the most recent Common Core of Data (CCD) school file. CCD is a universe file that includes all elementary and secondary schools in the United States. Schools operated by the Department of Defense or those that offered only kindergarten or pre-kindergarten or adult education were excluded from the SASS sample. The list frame used for the private school sample is the most recent Private School Universe Survey (PSS) list, updated with association lists. An area frame supplement is based on the canvassing of private schools within specific geographical areas. A separate universe of schools funded by the Bureau of Indian Education (BIE) is drawn from the Program Education Directory maintained by the BIE. To avoid duplicates in the BIE files, BIE schools in the CCD school file are treated as public schools.

Estimates of Sampling Error: Sample errors can be calculated using replicate

weights and Balanced Repeated Replication complex survey design methodology. Errors depend on cell sizes and range from less than 1 percent to over 5 percent (for reasonable cell sizes).

Other (nonsampling) Errors: Because of unit nonresponse, bias may exist in some sample cells. However, bias has been adjusted for in the weighting process. Analysis of bias has been studied and no significant bias has been detected.

Sources of Additional Material: Please see the SASS Web site at <<http://nces.ed.gov/surveys/sass/>>.

U.S. DEPARTMENT OF JUSTICE, FEDERAL BUREAU OF INVESTIGATION

Uniform Crime Reporting (UCR) Program

Universe, Frequency, and Types of Data: Monthly reports on the number of criminal offenses that become known to law enforcement agencies. Data are also collected on crimes cleared by arrest or exceptional means; age, sex, and race of arrestees and for victims and offenders for homicides, number of law enforcement employees, on fatal and nonfatal assaults against law enforcement officers, and on hate crimes reported.

Type of Data Collection Operation: Crime statistics are based on reports of crime data submitted either directly to the FBI by contributing law enforcement agencies or through cooperating state UCR Programs.

Data Collection and Imputation Procedures: States with UCR programs collect data directly from individual law enforcement agencies and forward reports, prepared in accordance with UCR standards, to the FBI. Accuracy and consistency edits are performed by the FBI.

Estimates of Sampling Error:
Not applicable.

Other (nonsampling) Errors: During 2007, law enforcement agencies active in the UCR Program represented 94.6 percent of the total population. The coverage amounted to 95.7 percent of the United States population in Metropolitan

Statistical Areas, 88.0 percent of the population in cities outside metropolitan areas, and 90.0 percent in nonmetropolitan counties.

Sources of Additional Material:

U.S. Department of Justice, Federal Bureau of Investigation, *Crime in the United States, annual, Hate Crime Statistics, annual, Law Enforcement Officers Killed and Assaulted, annual*, <<http://www.fbi.gov/ucr/ucr.htm>>.

U.S. INTERNAL REVENUE SERVICE

Corporation Income Tax Returns

Universe, Frequency, and Types of Data:

Annual study of unaudited corporation income tax returns, Forms 1120, 1120-A, 1120-F, 1120-L, 1120-PC, 1120-REIT, 1120-RIC, and 1120S, filed by corporations or businesses legally defined as corporations. Data provided on various financial characteristics by industry and size of total assets, and business receipts.

Type of Data Collection Operation: Stratified probability sample of approximately 112,000 returns for Tax Year 2006, allocated to sample classes which are based on type of return, size of total assets, size of net income or deficit, and selected business activity. Sampling rates for sample classes varied from .25 percent to 100 percent.

Data Collection and Imputation Procedures: Computer selection of sample of tax return records. Data adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return and to comply with statistical definitions.

Estimates of Sampling Error: Estimated CVs for Tax Year 2006: Coefficients of variation are published in the 2006 Statistics of Income Corporation Income Tax Returns, Table 1, by industry group. Sampling rates are contained in Section 3 of the same report.

Other (nonsampling) Errors: Nonsampling errors include coverage errors, processing errors, and response errors.

Sources of Additional Material:

U.S. Internal Revenue Service, *Statistics of Income, Corporation Income Tax Returns, annual*.

Individual Income Tax Returns

Universe, Frequency, and Types of Data:

Annual study of unaudited individual income tax returns, Forms 1040, 1040A, and 1040EZ, filed by U.S. citizens and residents. Data provided on various financial characteristics by size of adjusted gross income, marital status, and by taxable and nontaxable returns. Data by state, based on the population of returns filed, also include returns from 1040NR, filed by nonresident aliens plus certain self employment tax returns.

Type of Data Collection Operation: Stratified probability sample of 321,006 returns for tax year 2006. The sample is classified into sample strata based on the larger of total income or total loss amounts, the size of business plus farm receipts, and other criteria such as the potential usefulness of the return for tax policy modeling. Sampling rates for sample strata varied from 0.01 percent to 100 percent.

Data Collection and Imputation Procedures: Computer selection of sample of tax return records. Data adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return.

Estimates of Sampling Error: Estimated CVs for tax year 2006: Adjusted gross income less deficit 0.09 percent; salaries and wages 0.16 percent; and tax exempt interest received 1.17 percent. (State data not subject to sampling error.)

Other (nonsampling) Errors: Processing errors and errors arising from the use of tolerance checks for the data.

Sources of Additional Material:

U.S. Internal Revenue Service, *Statistics of Income, Individual Income Tax Returns, annual*, (Publication 1304).

Partnership Income Tax Returns

Universe, Frequency, and Types of Data:

Annual study of preaudited income tax returns of partnerships related to financial and tax-related activity during calendar years 2003 to 2006 and reported on

Forms 1065 and 1065B to the IRS in calendar year 2007. Data are provided by industry, based on the NAICS industry coding used by IRS.

Type of Data Collection Operation: Stratified probability sample of approximately 45,000 partnership returns from a population of 3.2 million filed during calendar year 2007. The sample is classified based on combinations of industry code, gross receipts, net income or loss, and total assets. Sampling rates vary from 0.07 percent to 100 percent.

Data Collection and Imputation Procedures: The sample of tax return records are selected via computer after data are transcribed by IRS and placed on an administrative file. Data are manually adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return. Data not available due to regulations are handled with weighting adjustments.

Estimates of Sampling Error: Some of the estimated Coefficients of Variation (the estimated standard error of the total divided by the estimated total) for tax year 2006: For number of partnerships, 0.36 percent; business receipts, 0.18 percent; net income, 0.73 percent; and ordinary business income; 0.53 percent.

Other (nonsampling) Errors: The potential exists for coverage error due to unavailable returns; processing errors; and taxpayer reporting errors, since data are preaudit.

Sources of Additional Material: U.S. Internal Revenue Service, *Statistics of Income, Partnership Returns and Statistics of Income Bulletin*, Vol. 27, No. 2 (Fall 2007).

Sole Proprietorship Income Tax Returns

Universe, Frequency, and Types of Data: Annual study of unaudited income tax returns of nonfarm sole proprietorships, Form 1040 with business schedules. Data provided on various financial characteristics by industry.

Type of Data Collection Operation: Stratified probability sample of 88,619 sole proprietorships for tax year 2006. The sample is classified based on presence

or absence of certain business schedules; the larger of total income or loss; size of business plus farm receipts, and other criteria such as the potential usefulness of the return for tax policy modeling. Sampling rates vary from 0.1 percent to 100 percent.

Data Collection and Imputation Procedures: Computer selection of sample of tax return records. Data adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return.

Estimates of Sampling Error: Estimated CVs for tax year 2006 are available. For sole proprietorships, total business receipts, 0.54 percent; depreciation 1.25 percent.

Other (nonsampling) Errors: Processing errors and errors arising from the use of tolerance checks for the data.

Sources of Additional Material: U.S. Internal Revenue Service, *Statistics of Income, Sole Proprietorship Returns* (for years 1980 through 1983) and *Statistics of Income Bulletin*, Vol. 28, No. 2 (Fall 2008, as well as bulletins for earlier years).

U.S. NATIONAL CENTER FOR HEALTH STATISTICS (NCHS)

National Health Interview Survey (NHIS)

Universe, Frequency, and Types of Data: Continuous data collection covering the civilian noninstitutional population to obtain information on demographic characteristics, conditions, injuries, impairments, use of health services, health behaviors, and other health topics.

Type of Data Collection Operation: Multi-stage probability sample of 49,000 households (in 198 PSUs) from 1985 to 1994; 36–40,000 households (358 design PSUs or 449 effective PSUs when divided by state boundaries) from 1995 to 2005; an estimated completed 35,000 households (428 effective PSUs) beginning in 2006.

Data Collection and Imputation Procedures: Some missing data items (e.g., race, ethnicity) are imputed using a hot deck imputation value. Sequential regression models are used to create

multiple imputation files for family income. Unit nonresponse is compensated for by an adjustment to the survey weights.

Estimates of Sampling Error: For 2006 medically attended injury episodes rates in the past 12 months by falling for: females 49.93 (4.44), and males 38.83 (4.59) per 1,000 population; for 2006 injury episodes rates during the past 12 months inside the home—34.89 (2.81) per 1,000 population.

Other (nonsampling) Errors: The response rate was 93.8 percent in 1996; in 2006, the total household response rate was 87.3 percent, with the final family response rate of 87.0 percent, and the final sample adult response rate of 70.8 percent. (Note: the NHIS questionnaire was redesigned in 1997, and a new sample design was instituted in 2006).

Sources of Additional Material: National Center for Health Statistics, Summary Health Statistics for the U.S. Population: National Health Interview Survey, 2006, Vital and Health Statistics, Series 10 #236; National Center for Health Statistics, Summary Health Statistics for U.S. Children: National Health Interview Survey, 2006, Vital and Health Statistics, Series 10 #234; National Center for Health Statistics, Summary Health Statistics for U.S. Adults: National Health Interview Survey, 2006, Vital and Health Statistics, Series 10 #235; U.S. National Center for Health Statistics, Design and Estimation for the National Health Interview Survey, 1995-2004, Vital and Health Statistics, Series 2 #130.

National Survey of Family Growth (NSFG)

Universe, Frequency, and Types of Data: Periodic survey of men and women 15–44 years of age in the household population of the United States. Interviews were conducted in 2002 in person by trained female interviewers. Interview topics covered include births and pregnancies, marriage, divorce, and cohabitation, sexual activity, contraceptive use, and medical care. For men, data on father involvement with children were collected. The most sensitive data—on sexual behavior related to HIV

and Sexually Transmitted Disease risk—were collected in a self-administered form in which the data are entered into a computer.

Type of Data Collection Operation: In the 2002 (Cycle 6) NSFG, the sample was a multistage area probability sample of men and women 15–44 years of age in the household population of the United States. Only one person 15–44 was selected from households with one or more persons 15–44. Data were collected and entered into laptop (notebook) computers. In the self-administered portion, the respondent entered his or her own answers into the computer. Sample included 12,571 interviews. The response rate was 79 percent. Hispanic and Black persons, as well as those 15–19 years of age, were sampled at higher rates than White adults. All percentages and other statistics shown for the NSFG are weighted to make national estimates. The weights adjust for the different rates of sampling for each group, and for nonresponse.

Data Collection and Imputation Procedures: When interviews are received, they are reviewed for consistency and quality, and analysis variables (recodes) are created. Missing data on these recodes were imputed using multiple regression techniques and checked again for consistency. Variables indicating whether a value has been imputed (“imputation flags”) are included on the data file.

Estimates of Sampling Error: Sampling error codes are included on the data file so that users can estimate sampling errors for their own analyses. Sampling error estimates for nine illustrative analyses are shown on the NSFG Web site at <<http://www.cdc.gov/nchs/nsfg.htm>>. Sampling error estimates are also shown in most NCHS reports.

Other (nonsampling) Errors: In any survey, errors can occur because the respondent (the person being interviewed) does not recall the specific fact or event being asked about. The NSFG questionnaire in 2002 was programmed to check the consistency of many variables during the interview, so that the interviewer and respondent had a

chance to correct any inconsistent information. Further checking occurred after the interview and during recoding and imputation. Typically, less than 1 percent of cases need imputation because of missing data.

Sources of Additional Material: The following references can be found at <<http://www.cdc.gov/nchs/nsfg.htm>>. “National Survey of Family Growth, Cycle 6: Sample Design, Weighting, and Variance Estimation.” *Vital and Health Statistics, Series 2, Number 142*, July 2006. “Plan and Operation of Cycle 6 of the National Survey of Family Growth.” *Vital and Health Statistics, Series 1, No. 42*. August 2005. “Sexual Behavior and Selected Health Measures: Men and Women 15–44 Years of Age, United States, 2002.” *Advance Data from Vital and Health Statistics*, No. 362, Sept 15, 2005.

National Vital Statistics System

Universe, Frequency, and Types of Data: Annual data on births and deaths in the United States.

Type of Data Collection Operation: Mortality data based on complete file of death records, except 1972, based on 50 percent sample. Natality statistics 1951–1971, based on 50 percent sample of birth certificates, except a 20 percent to 50 percent sample in 1967, received by NCHS.

Data Collection and Imputation Procedures: Reports based on records from registration offices of all states, District of Columbia, New York City, Puerto Rico, Virgin Islands, Guam, American Samoa, and Northern Marianas.

Estimates of Sampling Error: For recent years, there is no sampling for these files; the files are based on 100 percent of events registered.

Other (nonsampling) Errors: It is believed that more than 99 percent of the births and deaths occurring in this country are registered.

Sources of Additional Material: U.S. National Center for Health Statistics, *Vital Statistics of the United States*, Vol. I

and Vol. II, annual, and the *National Vital Statistics Reports*. See the NCHS Web site at <<http://www.cdc.gov/nchs/nvss.htm>>.

National Highway Traffic Safety Administration (NHTSA)

Fatality Analysis Reporting System (FARS)

Universe, Frequency, and Types of Data:

FARS is a census of all fatal motor vehicle traffic crashes that occur throughout the United States including the District of Columbia and Puerto Rico on roadways customarily open to the public. The crash must be reported to the state/jurisdiction and at least one directly related fatality must occur within thirty days of the crash.

Type of Data Collection Operation: One or more analysts, in each state, extract data from the official documents and enter the data into a standardized electronic database.

Data Collection and Imputation Procedures: Detailed data describing the characteristics of the fatal crash, the vehicles and persons involved are obtained from police crash reports, driver and vehicle registration records, autopsy reports, highway department, etc. Computerized edit checks monitor the accuracy and completeness of the data. The FARS incorporates a sophisticated mathematical multiple imputation procedure to develop a probability distribution of missing blood alcohol concentration (BAC) levels in the database for drivers, pedestrians, and cyclists.

Estimates of Sampling Error: Since this is census data, there are no sampling errors.

Other (nonsampling) Errors: FARS represents a census of all police-reported crashes and captures all data reported at the state level. FARS data undergo a rigorous quality control process to prevent inaccurate reporting. However, these data are highly dependent on the accuracy of the police accident reports. Errors or omissions within police accident reports may not be detected.

Sources of Additional Material: The FARS Coding and Validation Manual, ANSI D16.1 Manual on Classification of Motor Vehicle Traffic Accidents (Sixth Edition).

¹ For weighing ordinary commodities. ² For weighing precious metals, jewels, etc.

Tables Deleted From the 2009 Edition of the Statistical Abstract

2009
number

Sec. 3. **HEALTH AND NUTRITION**

149 Medical Care Benefits of Workers by Type and Amount of Employee Contribution: 2007

Sec. 4. **EDUCATION**

240 Public Schools Using Selected Safety and Security Measures, by School Characteristics: 2000 to 2006

253 Computer and Internet Use by Children and Adolescents: 2003

255 Private Elementary and Secondary School Teachers—Selected Characteristics: 2004–2005

277 Students Reported Disability Status by Selected Characteristics: 2003–2004

Sec. 5. **LAW ENFORCEMENT, COURTS, AND PRISONS**

332 Detainees Under the Jurisdiction of the Bureau of Immigration and Customs Enforcement (ICE): 2000 to 2006

338 Movement of Prisoners Under Sentence of Death: 1980 to 2006

Sec. 8. **STATE AND LOCAL GOVERNMENT FINANCES AND EMPLOYMENT**

412 County, Municipal, and Township Governments by Population Size: 2002

Sec. 10. **NATIONAL SECURITY AND VETERANS AFFAIRS**

503 Veterans Living by Age and Period of Service: 2007

Sec. 11. **SOCIAL INSURANCE AND HUMAN SERVICES**

538 401(k) Plans—Selected Features: 2006

Sec. 12. **LABOR FORCE, EMPLOYMENT, AND EARNINGS**

586 Persons Doing Job-Related Work at Home: 2004

613 Private Sector Job Gains and Losses: 1999 to 2007

614 Average Percent Share of Private Sector Gross Job Gains and Losses, by Firm Size: 1992 through 2007

616 Employed Adults in Selected Work-Related Formal Learning Activities by Form of Employer Support: 2004–2005

629 Federal Minimum Wage Rates: 1940 to 2009

630 Labor Force Violations: 2003 to 2007

Sec. 13. **INCOME, EXPENDITURES, POVERTY, AND WEALTH**

695 People and Families With Alternative Definitions of Income Below Poverty: 2006

Sec. 16. **SCIENCE AND TECHNOLOGY**

790 Federal Outlays for General Science, Space and Other Technology, 1970 to 2007, and Projections, 2008 and 2009

Sec. 17. **AGRICULTURE**

798 Certified Organic Farmland Acreage and Livestock: 2000 to 2005

Sec. 18. **NATURAL RESOURCES**

839 Timber-Based Manufacturing Industries—Establishments, Shipments, Payroll, and Employees: 2002

Sec. 18. **NATURAL RESOURCES**—Con.

- 843 Timber Removals—Roundwood Product Output by Source and Species Group: 2002
- 855 Marketable Aquaculture Sales by Species: 2005
- 856 Sales of Aquaculture Products by Type, by State: 2005

Sec. 19. **ENERGY AND UTILITIES**

- 881 Utilities—Establishments, Revenue, Payroll, and Employees by Kind of Business: 2002
- 887 Commercial Buildings—Energy Consumption and Expenditures: 2003
- 892 Renewable Energy, Consumption by Sector and Source—Estimates, 2005
and 2006, and Projections, 2010 to 2030
- 913 Carbon Dioxide Emissions by Sector and Source—1980 to 2006, and
Projections, 2010 to 2020

Sec. 20. **CONSTRUCTION AND HOUSING**

- 962 Expenditures by Residential Property Owners for Improvements and Maintenance and
Repairs by Type of Payment and Year Structure Built: 1995 to 2007

Sec. 21. **MANUFACTURES**

- 981 Tobacco Products—Summary: 1990 to 2006
- 984 Footwear—Consumption, Production, and Imports: 1990 to 2006
- 989 Steel Products—Net Shipments by Market Classes: 1990 to 2007
- 991 U.S. Machine Tool Consumption—Gross New Orders and Exports: 2006 and 2007

Sec. 22. **WHOLESALE AND RETAIL TRADE**

- 1015 Projected Online Retail Sales: 2007 to 2012
- 1016 Online Retail Spending, 2001 to 2007, and Projections, 2008

Sec. 23. **TRANSPORTATION**

- 1048 Hazardous Shipments—Value, Tons, and Ton-Miles: 2002

Sec. 24. **INFORMATION AND COMMUNICATIONS**

- 1094 Daily Newspapers—Number and Circulation by Size of City: 1980 to 2007
- 1096 Periodical Publishers—Estimated Revenue, Expenses, and Inventories: 2004 to 2006
- 1098 Book Publishers—Estimated Revenue and Inventories: 2004 to 2006
- 1099 Directory and Mailing List Publishers—Estimated Revenue, Expenses, and Inventories:
2004 to 2006
- 1103 Profile of Consumer Expenditures for Sound Recordings—Percent Distribution:
1990 to 2007
- 1113 Cellular and Other Wireless (except Paging) Telecommunications— Estimated Revenue
and Expenses: 2004 to 2006

Sec. 25. **BANKING, FINANCE, AND INSURANCE**

- 1136 Selected Financial Institutions—Number and Assets by Asset Size: 2007
- 1171 Household Ownership of Equities: 2005

Sec. 26. **ARTS, RECREATION, AND TRAVEL**

- 1189 Arts, Entertainment, and Recreation—Establishments, Revenue, Payroll, and
Employees by Kind of Business (1997 NAICS Basis): 1997 and 2002

Sec. 30. **INTERNATIONAL STATISTICS**

- 1354 Foreign Trade—Destination of Exports and Source of Imports for Selected Countries:
2005

Table	
A	
Abortions	99, 100, 101
Accidents and fatalities ..	195, 196, 1035, 1067, 1068, 1075, 1085
Age of driver	1077
Aircraft	1035, 1041, 1042
Alcohol involvement	1073, 1074, 1076
Costs	197
Deaths and death rates ..	114, 115, 116, 117, 118, 1067, 1068, 1085, 1308, 1309
Fires	197, 345
Industrial	641, 642, 643, 644

Statistical Abstract and Supplements

Printed Products

Statistical Abstract of the United States: 2010. Since 1878, the authoritative summary of statistics on the social, political, and economic organization of the United States. Includes a representative selection of statistics widely used by public officials, business analysts, educators, librarians, research workers, and students.

County and City Data Book: 2007. The latest in a series of publications that contains data for all counties and cities with a population of 25,000 or more. It also includes 2005 American Community Survey data for incorporated places of 100,000 or more inhabitants. Also included is a complete set of state maps showing all counties, places of 25,000 or more, and metropolitan areas. GPO price: \$75; GPO stock number: 003-024-09073-2. NTIS price: \$69; NTIS stock number: PB 2008-105137.

State and Metropolitan Area Data Book: 2006. This volume, the sixth in a series, presents a vast array of demographic and economic data for the United States, the 50 states, and the

District of Columbia; metropolitan areas (MAs); also includes selected data for component counties of MAs and population data for central cities of MAs. GPO price: \$47; GPO stock number: 003-024-09064-3. NTIS price: \$40 plus handling fee; NTIS stock number: PB2006-114701. Coming in 2010, seventh edition.

GPO orders may be mailed to: Superintendent of Documents, Government Printing Office (GPO), P. O. Box 979050, St. Louis, MO 63197-9000. Payment must accompany order. Telephone: 202-512-1800 or 1-866-512-1800. Fax: 202-512-2104. Publications also available at 732 N. Capitol St., NW, Washington, DC 20401 (telephone: 202-512-0132) and online at <<http://bookstore.gpo.gov>>.

NTIS orders may be mailed to: National Technical Information Service (NTIS), U.S. Department of Commerce, 5285 Port Royal Road, Springfield, VA 22161. Payment must accompany order. Telephone: 703-605-6000 or 1-800-553-6847. Fax: 703-605-6900. Publications also available online at <<http://www.ntis.gov/products/>>.

Electronic Products

Statistical Abstract of the United States on CD-ROM. Contains more than 1,300 tables found in the printed version as Adobe Acrobat files and Excel spreadsheets. Single copies are available for free distribution from Customer Services at 1-800-923-8282.

USA Counties on the Internet. Features over 6,000 data items for the United

States, states, and counties. Covered topical areas include age, agriculture, banking, building permits, business patterns, crime, earnings, education, elections, employment, government, health, households, housing, income, labor force, manufactures, population, poverty, social programs, trade, veterans, vital statistics, and water use. Available at <<http://censtats.census.gov/usa/usa.shtml>>.

"The Statistical Abstract is incomparable because it guides me to the appropriate data source, i.e., which agency is producing these statistics. Then I can go to that agency for more detail if I need it. Great value also in broadness of coverage."

— *University librarian*

"It's a wonderful, single source tool! One of five 'must-haves' for my collection in providing service to the company staff."

— *Librarian,
Market research
company*

"I think it's the best value the U.S. Government provides its citizens."

— *Researcher,
National Academy
of Sciences*

The 129th edition of the Statistical Abstract continues a proud tradition of presenting a comprehensive and useful portrait of the social, political, and economic organization of the United States. The 2010 edition provides:

- More than 1,300 tables and graphs that cover a variety of topics such as religious composition of the U.S. population, the amount of debt held by families, parent participation in school-related activities, federal aid to state and local governments, types of work flexibility provided to employees, energy consumption, public drinking water systems, and suicide rates by sex and country.
- Expanded guide to other sources of statistical information both in print and on the Web.
- Listing of metropolitan and micropolitan areas and their population numbers.
